Advanced Civ

Mod for BtS 3.19

version 0.94

4 Dec 2018

by Georg W. (firpo)

User Manual

AdvCiv is a modpack for advanced players, building on karadoc's "K-Mod: Far Beyond the Sword". AdvCiv does not add content, and, so far, makes few balance changes apart from changes to the AI. Multiplayer mode hasn't been tested properly. For questions, comments and current activities, please visit the development thread on CivFanatics.

Installation

To install AdvCiv, copy the unzipped AdvCiv folder into Beyond the Sword\Mods under Program Files. When the mod is loaded for the first time, it creates a folder My Games\Beyond the Sword\AdvCiv for the \underline{BUG} settings. You'll have to remove this folder manually to fully uninstall AdvCiv.

The above assumes a BtS installation from optical disc on Windows 8 or earlier, though I understand that it works the same way with the GOG.com edition and on Windows 10. Steam users may have to revert to the Game Spy version in order to run any mods, and the Mods folder should be in Steamapps\Common\Sid Meier's Civilization IV Beyond the Sword\Beyond the Sword. There is no way to play this mod on macOS except through a Windows emulator (this guide might help with that, but I haven't tried it).

To start the mod through a Windows shortcut, create a shortcut to Civ4BeyondSword.exe, open the shortcut's file properties, and add a space and mod=\AdvCiv to the Target field.

Contents

To start playing, it should suffice to read through the list of included mod components below. The other chapters describe the major changes in more detail. Most of the AI and UI changes are low-key though, and only covered by the (extensive) changelog after the last chapter. I've assigned a numeric id to each batch of changes; when an id is mentioned, there's always a link to further details and rationales in the changelog.

- <u>UWAI</u>: Utility-Based War AI. Rewrite of the AI parts dealing with decisions on war and peace. The new AI is better at anticipating the course of a war. Conditions that rule out war categorically in BtS (e.g. attitude or being occupied with another war) are factored into an overall utility value and can be outweighed by factors that favor war. UWAI can be disabled through the "Aggressive AI" game option.
- <u>DDiplo</u>: Dynamic Diplomacy. Makes some relations bonuses harder to get, particularly "mutual struggle", "open borders" and "supplied resources". All AI memory decays, including "You declared war on us". Two new modifiers: "We oppose your ruthless expansionism" and "You agreed to come to our aid in wartime". +4 relations is required for "pleased" attitude and -1 for "cautious", but this is evened out by changes to the "first impression" modifier.
- <u>BBarb</u>: Better Barbarians. Barbarian activity increases gradually until 67% of a continent is settled; fewer Barbarians on poor-yield tiles; creation rate adjusted to game speed; land units can spawn aboard Galleys; fogbusting nerfed; Great Wall reworked; goodies from Tribal Villages adjusted to game progress; Scout and Explorer buffed; more plausible development on all-Barbarian continents (e.g. Terra map).
- Immortal Culture: Culture of dead civs stays in the game and can cause anger and revolts. Revolts can occur in any cities, not just near a border. Shortened occupation countdown in conquered cities, but the countdown decreases only probabilistically based on the strength of the occupying force.
- K-Mod by karadoc: substantial AI improvements (incl. BBAI); usability improvements (incl. BUG, which in turn includes Civ4lerts, reminder, Exotic Foreign Advisor and several optional advisor screens); bugfixes (incl. the unofficial patch); improved developer tools (AIAutoPlay, Civ Changer); performance tweaks; minor balance changes (several from PIG, incl. Lead From Behind; especially noteworthy: Serfdom, Scientific Method and cargo ships buffed); practically no flavor changes other than Actual Quotes. To my knowledge, the main BBAI contributors are jdog, EmperorFool, Afforess, Fuyu and LunarMongoose. For credits for BUG, see the BUG help file (Alt + Ctrl + O in game).
- <u>Kek-Mod</u>, a K-Mod <u>fork</u> by DarkLunaPhantom, partly included (mostly <u>bugfixes</u>)
- Show Hidden Attitude Mod by DaveMcW
- <u>Various changes</u> in the spirit of K-Mod, especially to rules and AI behaviors that are easy to exploit in BtS; e.g. can't steal Workers.
- <u>SPaH</u>: Start Points as Handicap. Game option that gives an Advanced Start to the Al civs, but not to the human civs. Start points can also be assigned unequally to the Al civs; the mod then places the civs with the most points the farthest away from the human civs initially.
- R&F: Rise and Fall. Game option that divides the game into chapters; you take control of a different civ in each chapter. A score is awarded after each chapter based on how

the standing of your civ has changed. The overall objective is to maximize the total of the awarded scores.

- PerfectMongoose map script (v3.2; main authors: Cephalo and LunarMongoose)
- Blue Marble "light": Altered terrain textures that are easier on the eyes; based on Kai Fiebach's <u>Blue Marble</u>, but closer to the original textures. (<u>screenshots</u>)

Utility-Based War Al

UWAI is enabled by default, but players who prefer the K-Mod AI, can use the "Aggressive AI (Legacy)" option on the Custom Game screen to disable UWAI; that option also enables the Aggressive AI mode. There aren't separate options for UWAI and Aggressive AI because UWAI doesn't have an aggressive or non-aggressive mode (see also change 019), and the K-Mod AI is notoriously belligerent with and without Aggressive AI. (K-Mod without Aggressive AI can still be configured in GlobalDefines advc.xml.)

The major differences between UWAI and BtS/K-Mod:

UWAI BtS/K-Mod

Military analysis: UWAI predicts how ongoing and hypothetical wars might develop in the medium-term, i.e. over the next 25 to 50 turns. The projection is based on power ratings for various military branches, namely the army (land and air units available for offensives), home guard (only available for defense), fleet (sea units), logistics (cargo ships) and nukes. Simulates military build-up (based on estimated per-turn production), clashes of army stacks, naval landings and attempted conquests of specific cities. The outcomes include cities lost and conquered by the various war parties, invested production and lost military power. These predictions aren't intended to be accurate; they only need to be plausible enough to result in plausible AI behavior.

The BtS military analysis simply compares present power ratings. Each cives a single power rating, i.e. land and sea units aren't distinguished. K-Modadds a projection of military build-up.

Power: Power ratings are based on per-unit military power values that are, essentially, computed as combat strength raised to the power of 1.7. E.g. Swordsman has about 21 power and Cuirassier 93; this value also accounts for the faster movement and other useful abilities of Cuirassiers.

Caveat: The power graph on the Info screen is still based on BtS power ratings.

Power values are usually equal to combat strength values; e.g. two Swordsmen count as much as one Cuirassier. That is, BtS underestimates the power of technologically advanced units.

The **evaluation** of the expected military outcomes is broken down into 26 aspects, each dealing with one specific reason for war (e.g. gaining more cities or loathing for a war opponent) or against (e.g. diplomatic ill will or invested production). The result of the evaluation is a utility value indicating how worthwhile the war (plan) in question is.

The AI considers attitude, military power, geographical proximity and victory strategies. These factors are combined in an arcane manner by a function called startWarVal.

Peace is evaluated separately by the endwarVal function, which is based on war successes, finances and the tactical situation, i.e. very different from startWarVal.

K-Mod has expanded startWarval, but it's still inconsistent with endWarval, leading to war-peace oscillation, and too ad hoc for this important part of the AI.

War plans are fully **re-evaluated** each turn while in preparation, and canceled if they no longer appear worthwhile. The target of a war plan can change during preparations.

War plans in prepration are only canceled in exceptional circumstances. The target can't change.

The only necessary condition for beginning (and continuing) war preparations is a **positive** war utility. Attitude, power and proximity are all covered by the war utility computation and no longer work as hard requirements. That said, attitude has a particularly strong impact on war utility, so that a relatively peaceful leader like Saladin doesn't go to war against a civ that he is pleased with unless there are unusually strong reasons for the war. Once preparations are concluded and war imminent, it's too late for a change in attitude to stop the war.

Thresholds for attitude, power ratio and shared borders serve as necessary conditions for war; in particular, many Al leaders never start war preparations against civs they're pleased with. (K-Mod ignores this restriction in some cases during the endgame.)

If war utility is positive, the AI begins war preparations with a per-turn probability based on personality and the utility value. As a result, the AI can be **quick to declare war** in response to another declaration of war or some rapid shift in power (e.g. after upgrading to Riflemen). The per-turn probability is based only on personality and attitude.

The AI **makes peace** if and only if war utility is negative or outweighed by reparations.

Apart from an endWarVal check, there are some special conditions for peace, such as having fought to a long draw or being alone in what had started as a dogpile war.

After a declaration of war, the AI **refuses to talk** for just one turn. After that, the AI can be contacted unless the price for peace would be more than the other side could pay.

Exception: If war was declared at the request of a third party or through a defensive pact or a vote, the attacked AI civ refuses to talk to its war enemies for the same duration as in BtS.

The refuse-to-talk duration is based on Al personality and war success. Possible reparations don't play a role.

The AI can start a war while already in another war. It's possible, in principle, to hire an AI civ for war even if that AI civ is already preparing or fighting a war, but the price is usually prohibitive.

The AI doesn't consider war preparations when it's already in a war; K-Mod relaxes this restriction in the endgame. In both BtS and K-Mod, the AI can't be hired for war while already conducting or planning war.

The AI refuses requests for starting a war regardless of war utility if either its attitude toward the proposed target is too high, or its attitude toward the sponsor is too low. (Such plans are too sensitive to even discuss with anyone who isn't a trusted partner.)

Same: "We couldn't betray close friends" or "We don't like you enough".

Otherwise, the necessary payment is computed based on war utility. If the result exceeds a threshold, the AI refuses to declare war, stating "We are afraid of their military might" if the power ratio is highly unfavorable, and "We have enough on our hands right now" otherwise. Thus, "enough on our hands" doesn't imply that the AI is already preparing another war.

The AI also refuses categorically if the power ratio is too unfavorable or when already preparing or fighting a war.

When an AI leader becomes willing to discuss a sponsored war, the player is notified through an alert message (change 210a) and the Glance tab of the Foreign Advisor screen shows a fist icon (152).

In BtS, if the trade screen says "enough on our hands," then the AI is definitely preparing a war. In K-Mod, other reasons for not wanting to start a war can block the enough-on-hands tell.

While the utility of a war plan against a human player is positive but small, and the AI hasn't begun war preparations yet, there's an increased chance of demands for **tribute** or a gift.

For the player's convenience, the BUG mod shows a fist icon on the scoreboard next to any AI civ that will give the "enough on our hand" response. (AdvCiv disables this.)

UWAI continues to use almost all of the AI **personality** values from BtS. Many work differently, but, in most cases, to a similar effect.

Tribute demands are made randomly against any disliked and militarily weaker human civ. Whether the AI is currently ready to start a war doesn't play a role.

For example, in UWAI, a high MaxWarNearby-PowerRatio leads to an optimistically biased military analysis, which can make an AI leader willing to start wars that he or she may well lose.

Each AI leader has some 20 personality values affecting war and peace, set in CIV4LeaderHeadInfos.xml.

MaxWarNearbyPowerRatio is a threshold that rules out war if the military power ratio is too unfavorable.

Hiring war allies, granting or denying tribute, UN peacekeeping and some **other decisions** that imply war or peace are made based on war utility. Separate heuristics for these decisions, based on some combination of power ratio and attitude.

Decisions about vassal agreements are still largely made by the K-Mod AI (with many adjustments; change <u>112</u>); ditto defensive pacts.

The AI is *more* willing to make peace when there are hostile units near its cities, but can't evaluate if these units actually pose a threat. This can be

Unless a city is clearly about to fall, the AI is less inclined to make peace when there are enemy units near its cities.

Positions of units have no bearing on whether the AI is willing to capitulate.

exploited for better peace deals.

This does not apply to capitulation; the Al capitulates only when faced with a threatening number of hostile units inside its borders (change 112b).

This is the only part of UWAI that cares about positions of units on the map. UWAI does not control *how* war is conducted, only *if*.

Dynamic Diplomacy (DDiplo)

One very noticeable change is in the mapping from relations values to AI attitude:

Relations	≥ 10	≥ 4	≤ 3	≤ -2	≤ -8
AI attitude	Friendly	Pleased	Cautious	Annoyed	Furious

For comparison, in BtS, Cautious begins at -2, Pleased at +3 and Friendly at +10. However, DDiplo also removes the (hidden) -1 relations penalty on Noble difficulty and above, meaning that, in effect, the thresholds for Pleased and Cautious stay the same and the threshold for Friendly is one lower than in BtS. To win an Al civ's vote for a Diplomacy victory, Friendly attitude is now required. (In BtS, +8 relations suffice.) Change id: 148.

The following changes to relations modifiers should make diplomacy more consistent, more dynamic and less exploitable. Changes to vassal agreements are described at the end of the chapter.

- "Our mutual military struggle ...": A bonus of more than 1 now requires getting involved in the war, that is, to inflict or incur losses. The bonus decays over time and is reduced when there is a non-mutual war. (In BtS, it's sufficient to be formally at war, and, once accumulated, the bonus stays for the rest of the game.) Fighting inside an ally's borders is especially effective at increasing the diplo bonus. Fighting Barbarians inside another civ's borders counts too, even when there is no shared war. 130m
- "You agreed to come to our aid in wartime": Joining a war at the request of an AI civ results in a +1 relations bonus that is remembered for 100 turns on average. 130s
- When a war ally is brought in, the two allies automatically sign a 10-turn peace treaty. 146
- "Years of peace" only start to count once a civ is met. 130a
- "You stopped trading with us": It's no longer possible to propose an embargo against one's own trade partner; will first have to cancel those trades. The target of the embargo refuses to talk with both the civ that proposed the embargo, and the one that agreed to

- it. (Except when a master asks its vassal to stop trading.) The embargo severs even recent deals that couldn't otherwise be canceled. <u>130f</u>
- "You made an arrogant demand" now only applies when a tribute demand is granted; no diplo penalty if the AI refuses to pay. However, if a player declares war on an AI civ that remembers having paid tribute, that civ and all AI civs it has met refuse tribute and help requests by the player for (on average) 80 turns. When an AI civ declares war, it forgets all tribute demands, i.e. it can be attacked without repercussions. 1300
- "You press us too hard": There is always a chance that the AI refuses a request for a gift for no particular reason. A refused request is therefore not a reliable way to determine if the AI is preparing war against the player who makes the request. The AI is willing to grant a gift about every 30 turns (20 in BtS). 144
- "You're getting ahead of us": Al civs dislike civs that are ranked slightly higher on the scoreboard, but not those ranked much higher. These rank-based modifiers work differently in BtS (and BtS hides them from the player). 130c
- "A first impression is a lasting one": Another hidden BtS modifier; this one remains static
 for the entire game. It is based on leader personalities and affects mostly relations
 between AI civs. DDiplo reduces the modifier a bit, specifically the impact of "peace
 weight", to make diplomacy less preordained. 130b
- "We oppose your ruthless expansionism": Having a high number of cities with foreign majority culture results in relations penalties from everyone. These penalties complement the ones for having vassals ("worried about our rivals being vassals to your empire"). <u>130w</u>
- "We would have nothing to gain": Al leaders are reluctant to sign Open Borders with civs that they haven't located yet (not a single revealed land tile). When pleased, most Al leaders sign Open Borders regardless of revealed tiles. <u>124</u>
- "Our Open Borders have brought our peoples together": The time that it takes to attain and increase this bonus depends on the distance and trade routes between the two peoples' cities. <u>130i</u>
- "All the years you have supplied us with resources": This can take many, many years if the recipient already has many resources. <u>149</u>
- All Al memory decays. For example, memory about how "you razed our cities" decays by one city every 75 turns on average (<u>130r</u>). The other decay times (no decay in BtS):

Memory type	Turns
"You razed our cities"	75
"You razed a holy city"	150
"Your spy was caught"	40
"You made an arrogant demand"	30
"You liberated our cities"	150
"You granted us independence"	10x30

Memory type	Turns
"You nuked us"	120
"You nuked our friends"	80
"You negotiated a trade embargo"	60
"You declared war on our friends"	120
"You brought in a war ally"	75
"You declared war on us"	150

- "You declared war on us" penalty reduced to -2 if the declaration of war is triggered by a defensive pact. <u>130y</u>
- "We are upset that you have signed Defensive Pacts with our rivals": Not if we like

these rivals, or have our own defensive pacts with them, or if we're too weak to attack them anyway. Also no penalty for voluntary vassals ("our rivals being vassals to your empire") if we like those vassals. 130t

- The AI refuses to sign a Defensive Pact if it was recently canceled (same mechanism as for canceled Open Borders). Defensive Pacts aren't canceled when triggered, i.e. when a third party declares war on one of the signatories. <u>130p/ dlph.3</u>
- "We care for our brothers and sisters of the faith"/ "You have wisely chosen your civics": If many civs share a religion or civic (e.g. Hereditary Rule), the relations bonuses are reduced. Conversely, the AI is more tolerant toward different religions if its own religion is shared by few. The AI only gets upset about another religion once it encounters a city with that religion. 130x/130x
- "You accepted our state religion/ favorite civic": The bonus applies only so long as the player keeps running that religion or civic. <u>145</u>
- "Our trade relations have been fair and forthright": No longer based (primarily) on how recently a civ was met; more difficult to max out; and trades that are indeed "fair" contribute to the bonus. (In BtS, only what the AI gets on top of a fair deal counts.) 130p
- "You have traded with our worst enemy": The penalty is reduced when the worst enemy changes. Trade with a war enemy counts (partially) even if that enemy is not *the worst* enemy. Open Borders contribute to the enemy trade penalty. <u>130p</u>
- The AI forgets actions of other civs, like "You gave us help", a little less randomly, whereas the tracking of e.g. "years of peace" or years of supplied resources is now a bit randomized. (In BtS, e.g. "years of peace" pay off after exactly 60 turns.) 130k/ 130i

AdvCiv eliminates most of the diplomatic drawbacks associated with **capitulated vassals** (change <u>130v</u>). They have Friendly attitude toward the master, share the master's attitude toward rivals (but no better than Cautious), can't be anyone's worst enemy and are ineligible as war targets and for elections (<u>014</u>). The master civ is held responsible for grievances caused by its capitulated vassals – penalties for razed cities, border troubles and trades with a worst enemy are partially added to the master's relations modifiers –, but the master is not blamed for things that the vassal civ did prior to the vassal agreement, nor for the vassal's religion.

Peacefully acquired vassals still work as in BtS, i.e. as largely independent. I've tweaked the conditions under which an AI agrees to a vassal agreement though: civs only look for a master if they feel threatened – having fallen behind isn't reason enough (112). If a master civ fails to protect its voluntary vassal (35% territorial loss or nuked repeatedly), the vassal cancels the agreement (143). A vassal that gets close to a victory condition also cancels the vassal agreement (112).

The following changes (130h) should make it easier to have productive relations with former vassals after **helping them break free**: Civs in a vassal-master relationship don't consider each other "friends" as far as the "you declared war on our friends" penalty is concerned. When a vassal makes peace or breaks free, its memory about past declarations of war is decreased. When a capitulated vassal is freed because its master capitulates, the freed vassal gives +2 "You granted us independence" to the master of its former master. Freed vassals and their liberator automatically cease fire. 130y

Happiness from vassals ("We influence other civilizations") is now only gained from voluntary vassals, and it's capped at +1. $\underline{142}$

Better Barbarians

I've revised most aspects of Barbarians, mainly for improved game balance.

Barbarian activity increases gradually: The activity peak is reached when two thirds of a continent is claimed by cultural borders. This happens typically by the early Medieval era, which fits historically with the Migration Period in Europe and the Sixteen Kingdoms in China. In contrast, BtS Barbarians peak shortly after they first appear.

Fewer Barbarians on low-yield tiles: The number of Barbarians that appear on a continent is based on the number of (culturally) owned and unowned tiles; in BtS, all land tiles count equally. AdvCiv disregards tiles with 0 food yield, but adds 50% of the number of coastal tiles surrounding the continent. Thus, continents with large (arctic) deserts produce fewer Barbarians than in BtS, whereas snaky continents with long coasts produce more.

Barbarians can no longer appear on tiles with 0 food. They're less likely to appear on tiles with a total yield of 1, i.e. jungle and tundra, and more likely on all other tiles. The aim of this change is to help civs that are surrounded by poor land, and to disadvantage civs that have much good land to settle.

"Fogbusting" nerfed: In BtS, Barbarians can't appear within two tiles of any unit. This makes it easy to keep Barbarians at bay with just a few Warriors. AdvCiv removes this 2-tile restriction. That said, Barbarians still can't appear on tiles visible to any civ. So, fogbusting remains a useful tactic (ideally from hills for extra visibility), but covering the entire frontier is often infeasible.

Adjustment for game speed: The rate at which defeated Barbarians are replaced is now adjusted to the game speed setting. In BtS, Barbarians tend to be much more dangerous on slow settings than on fast ones; this should not be the case in AdvCiv.

The Great Wall reworked: TGW now has two out of the three following abilities depending on whether Barbarians are raging (RB), standard or disabled (no Barbarians, NB):

- +1 trade route in cities on the same continent except when playing with RB;
- prevents Barbarians from entering your borders on this continent except with NB;
- +100% emergence of Great Generals inside your cultural borders if RB or NB.

To match the flavor of the trade route ability, TGW generates **Great Merchant** points instead of Great Spy points. TGW now **requires Archery**, costs **300 production** instead of 150 and requires **two Walls** (i.e. Masonry is still required indirectly). The prerequisite Walls can be in arbitrary cities (like the Monuments for Statue of Zeus). The new abilities should be reasonably balanced for all Barbarian settings. As for the increased cost, bear in mind that Barbarians don't become a major threat until the Classical era in AdvCiv, so there is no need to build this wonder very early.

A high number of extra trade routes can incentivize city spam, therefore, TGW goes **obsolete with Corporation**, and I've taken this opportunity to weaken The **Great Lighthouse** (GLH): Now obsolete with Astronomy instead of Corporation, whereas the **Colossus** goes obsolete with Chemistry instead of Astronomy (and K-Mod increases its cost by 100).

Barbarian naval assaults: Barbarian land units can appear aboard Barbarian Galleys in the fog of war. Once a Galley has cargo, it moves toward some nearby city for a naval assault. The units can also be dropped along the way, randomly, or in order to attack an unprotected non-combat unit. The intention is to make Barbarian Galleys harder to ignore,

especially for civs without seafood at stake.

Great General points (GGP) from Barbarians: In BtS, up to 10 XP per unit can be gained from combat with Barbarians, but that XP doesn't translate into GGP. This is probably to disincentivize "farming" of Barbarians in tiles that are deliberately left unobserved. AdvCiv counts 50% of XP from Barbarians as GGP, rounded down. To avoid farming, XP from attacks on Barbarians is reduced to 75%. This results e.g. in only 1 XP and 0 GGP from a successful attack at 90% odds – no risk, no GGP.

Scouts & Animals: Scouts can now attack animals – after all, Hunting is a requirement for training Scouts – and Scouts get a combat bonus against all Barbarians, not just against animals. A "No Animals" option has been added to the Custom Game screen, taking the place of the poorly implemented "No Espionage" option (see change 309 about restoring that option). "No Barbarians" still means that no animals appear. On Emperor difficulty, the AI starts with one free Scout instead of two; this leaves more Tribal Villages to humans.

Explorers & Tribal Villages: Explorers get the ability to attack Barbarians, but they can't capture cities and no longer receive free promotions. This allows Explorers to enter Tribal Villages guarded by a Barbarian unit.

Starting after turn 50 (on Normal speed; speed-adjusted), most of the Tribal Village effects become gradually stronger and reach their maximal impact on turn 250.

- Gold: By turn 250, the gold is increased tenfold.
- Tech: Initially about 55 progress toward a random pre-Industrial tech, and about 550 by turn 250.
- Map, XP, Heal: These have a chance of triggering an additional positive outcome. The chance reaches 100% around turn 160.
- Scout: Can be replaced by a Worker; same probability as above.
- Warrior and Hostiles: May create Warriors, Archers, Longbows, Musketmen, depending on the tech known to the Barbarians. A friendly unit can start with some free promotions.

Most of these changes are customizable through XML; see Config under 314 and 315.

New World Barbarians: These changes only really affect maps like Terra that have initially unsettled continents.

- Barbarian cities begin to appear on continents without any civs earlier than they do in BtS. This way, a patchy network of Barbarian cities tends to be cover the New World by the time it is discovered; reminiscent of Sid Meier's Colonization. Since these cities produce lots of units by themselves, I've disabled the placement of (free) Barbarian units on continents without civs, and I've added a mechanism that disbands Barbarian units when an area becomes too crowded. Barbarians act relatively peacefully so long as their cities on a continent outnumber those of all civs taken together. This gives civs settling the New World time to establish themselves before the Barbarians undertake concerted attacks.
- The technological progress of Barbarians slows down once they stop sharing a continent with any civ. Once the New World is colonized, Barbarian research catches up quickly, allowing the New World Barbarians to train Musketmen.
- To reinforce the notion that each Barbarian city represents a separate tribe or city state,
 I've made sure that the borders of Barbarian cities don't meet. Barbarians can no longer
 build any cultural buildings, and they don't build culture directly either. Consequently,
 their borders don't expand beyond the inner city ring. When Barbarian cities are
 created, the city site is chosen only based on the inner ring. This is for plausibility, but

also to make conquered Barbarian cities a bit less useful. Barbarian Workers only improve their home cities and don't build roads to other cities.

For more details, see change ids <u>300</u> et seq. in the changelog. On a related note, AdvCiv makes the AI civs more willing to settle on unclaimed continents. (change <u>040</u>).

Immortal Culture

- Eliminating a civ no longer removes that civ's tile culture. The remaining culture can cause anger, now listed as "We resent being ruled by a foreign culture" instead of "We yearn to join our motherland". <u>099</u>
- Revolts can occur in any cities, not just those close to foreign borders, and culture of dead civs can cause revolts. However, only border cities can flip. Cities can never flip from a master to its vassal. If a city can't flip, it loses one population on the third revolt and on subsequent revolts. <u>099c</u>
- The occupation timer after conquest or revolt decreases only with a per-turn probability. That probability is computed based on the city's revolt probability. The nationality bar on the city screen shows both probabilities. The occupation timer after conquest starts at no more than 3 turns (in BtS: 3 + 50% population).

Revolts can happen during occupation unless the city owner is at war with the owner of the foreign culture.

Damage makes units less effective at suppressing revolts, and occupying units heal only as fast as in a friendly non-city tile. $\underline{023}$

- "Cruel oppression" anger in a city makes revolts considerably harder to suppress.
 (Otherwise, Slavery would be a too obvious answer for anger from foreign culture.) 101
- An alert message is shown when a city's revolt chance becomes positive. 210b
- Flipping-after-conquest is enabled by default. (The game option is now called "No City Flipping after Conquest" and it's unchecked by default.) <u>101</u>
- When a tile is culturally contested between two civs and only one of them has a city close enough to work the tile, then the other civ's tile culture is affected by a decay rate.
 This gives the civ that is able to work the tile an edge (especially on Epic and Marathon game speed as the decay rate isn't speed-adjusted). 099b
- K-Mod also makes changes to culture and revolts. AdvCiv keeps some of these changes – see the first few bullets in the next chapter –, and reverses others:
 - Revolt chance is again proportional to the percentage of foreign culture, as in BtS;
 K-Mod sometimes required infeasibly large garrisons to bring the revolt chance down all the way to 0. 101
 - AdvCiv disables culture from trade routes (still optional via XML). 125

K-Mod

See also the K-Mod thread on CFC.

BUG (Better Unaltered Gameplay): Many BUG options are disabled in K-Mod, but can be enabled from the in-game menu. K-Mod does not include <u>BULL</u>, meaning that some help text and unit actions added by BULL are unavailable; cf. this <u>Git Issue</u>. I've merged the

Show Hidden Attitude Mod (included in BULL but not BUG; change <u>advc.sha</u>) and added Sentry behavior to Fortify-Heal (change <u>004l</u>). The decay of invested worker turns (<u>Misc. changes</u>; <u>011</u>) should make BULL's pre-chop action dispensable. So, I don't think there's anything crucial in BULL that isn't in AdvCiv.

For players who aren't familiar with K-Mod, I'm listing the major gameplay changes. For players who *are* familiar with K-Mod, I'm also listing the K-Mod changes that I've reverted (end of this chapter).

- Culture system: Culture levels (e.g. "Influential") matter less in culture wars, and specific
 city culture values matter more. Moreover, the range at which the culture of a city affects
 borders has been increased, meaning that the number of border cities and their culture
 are less decisive. The output of some culture sources has been reduced:
 - Cathedrals, Mosques etc. increase culture by 40% instead of 50% and cost only 240 instead of 300.
 - Free Speech increases culture by 50% instead of 100%.
 - Culture from Great Works ("culture bomb") is adjusted to the game era.
 - Sid's Sushi Co. provides less culture per resource.
 - · About a dozen Great Wonders have their culture output reduced a bit.
 - The Spread Culture mission only affects tile culture, i.e. can no longer be exploited for an "espionage victory".
- City flipping: Revolts happen faster, but cities don't flip until the third revolt. "The net effect of these changes is that (...) it's a bit more predictable and less dependent on luck." (from the K-Mod changelog)

The revolt probability is halved if a unit with the Leadership promotion is present.

- Vassal agreements: Can instruct vassals to start war preparations via "Let's discuss something else". The impact of vassals on number-of-cities maintenance is more noticeable than in BtS.
- The number-of-cities maintenance cost is no longer capped, meaning that very large empires can incur very high city maintenance.
- Expendable units are chosen as defenders when no defender has favorable odds.
 (Lead From Behind mod component)
- Buffed considerably:
 - Serfdom +1 commerce on farms and plantations; -1 on towns
 - All cargo ships +1 capacity
 - · XP from Great Warlord increased based on the number of units in the tile
- Production overflow: In the late game, cities can produce two or more units of a kind within the same turn. (BtS discards the overflow in these cases, the <u>Unofficial Patch</u> turns it into gold.)
- When a religion spreads, one of the older religions is sometimes (randomly) removed.
- The AI never agrees to Cease Fire.
- Trades offered by the AI can come with a discount. The discount is foregone if the

player makes a counter-proposal. (In AdvCiv, the offer can also include more gold than the AI would normally consider; change <u>026</u>.)

- Cities that the AI isn't willing to trade aren't shown in the trade screen, and unrevealed
 AI cities are treated as secret. No BUG alerts about cities founded on unrevealed tiles.
- The AI uses a greater variety of spy missions.
- Nerfed slightly:
 - War Elephant +10 cost
 - The Colossus +100 cost
- Buffed slightly:
 - Vassalage -25% number-of-cities maintenance
 - · Mercantilism upkeep Low
 - Grenadier +10% city attack
 - Machine Gun +10% vs. Mounted units
 - Watermill +1 commerce initially, but only another +1 from Electricity
 - Drill I -15% collateral damage
 - Protective trait production bonus to Security Bureau
 - Aggressive trait production bonus to Jail; Jail gets -2 espionage (regardless of trait)
 - Industrial Park +1 free Engineer (i.e. 2 in total), +50 cost
 - Nuclear Plant meltdowns less disastrous
 - Guided Missile +1 range
 - Space Elevator another +50% production to spaceship parts
 - Forest Preserve +1 commerce
 - Environmentalism doesn't penalize corporations, yields +1 happiness from Public Transportation, but has High upkeep. Environmentalism and Public Transportation both reduce bad health from population instead of granting good health.

(These two lists aren't complete.)

Some that I couldn't put better, quoted from the K-Mod thread:

- "Barbarian Galleys get -10% strength"
- "Tech requirements for corporations changed: (...) Sushi Co: Refrigeration, Cereal Mills: Medicine, Creative Constructions: Steel, Standard Ethanol: Combustion"
- "Mining Inc now uses Aluminium and Uranium instead of Gold and Silver (this should make Mining Inc slightly weaker, and Civ Jewelers more viable)"
- "Cereal Mills also has +0.25 food output"
- "In the diplomacy screen, pressing 'Lets stop this fighting...' will now bring up the trade screen with the AI's suggested peace terms. (Originally, it just made peace instantly without any trades – it was a horrible button.)"
- "Tech trades in which the receiving player is more than 2/3 of the way through

researching the tech or when the tech is two eras behind the 'game era' [the recipient's era in AdvCiv; <u>550e</u>] no longer count toward tech trade memory; i.e. they don't contribute to causing 'We fear you are becoming too advanced'."

 "Global warming has less of an impact on the map, but (in long games) causes unhappiness to those civs contributing to pollution. There's a new advisor screen [Environment tab on the Economics Advisor] about this."

Revised by AdvCiv:

- Changes made in order to smoothen or reinforce K-Mod balance changes:
 - Forest Preserve at Biology instead of Scientific Method. <u>901</u>
 - Watermill takes 4 turns to build, and Lumbermill 5 (instead of 8 both). 902
 - Serfdom has Medium upkeep instead of Low. <u>912a</u>
 - Pacifism costs 1 gold per military unit, not 0.5. <u>912b</u>
 - Colossus is obsolete with Chemistry. 310
 - Great Lighthouse obsolete with Astronomy; cost 250 (300 in K-Mod, 200 in BtS). 310
 - Ship of the Line strength 10 (as in K-Mod), +25% against Frigate (K-Mod 20, BtS 50), reg. Iron (as in BtS), +1 speed with Coal, increased bombard rate, cost -10. 905b
 - Ironclad at Steam Power (no Steel required), +25 % defense on Coast. 905b
- Changes kept from K-Mod versions prior to 1.45:
 - Scientific Method +1 research per specialist (1.45 moves this to Computers and has Scientific Method provide +10% commerce)
 - Lumbermill at Guilds with +1 commerce (902: regardless of river), but no production bonus until Replaceable Parts (1.45 gives them +1 production already at Guilds)
- Fixed AI issues introduced by BBAI and K-Mod:
 - Al razes fewer cities and less randomly; <u>116</u>
 - uses Slavery and Drafting less aggressively; <u>121</u>, <u>017</u>
 - uses malicious espionage only against civs it dislikes; 120

Reverted by AdvCiv:

- See <u>Immortal Culture</u> about reverted changes to culture and revolts.
- Gifting Great People to the AI does not provide a relations bonus. 141
- No impact of global research on inflation; instead, adjusted tech costs based on difficulty for a more historically accurate tech pace, and Immortal games now start on turn 10 and Deity games on turn 20. 251
- Some minor balance changes undone that weren't pulling their weight in terms of added complexity (change <u>200</u>):
 - Colosseum back at cost 80, no culture boost
 - 2 culture from Monastery, not 1; 4 culture from Madrassa, not 3
 - Eiffel Tower back at Radio

- Civilized Jewelers back at Mass Media (not Corporation)
- 1 Artist from Hippodrome (K-Mod 2, originally 0)
- Drill does not lead to additional promotions
- No change to maintenance of individual corporations (all at 100% as in BtS)

Important miscellaneous changes in AdvCiv

- Attacking a Worker or Settler no longer yields a captured Worker; the attacked unit just dies. I.e. no more Worker stealing. <u>010</u>
- Trade routes can only come from revealed cities, and the paths to those cities need to be revealed as well. Cities are temporarily unavailable for trade when in disorder. Trade along rivers doesn't require any tech (as in Warlords/ Vanilla; BtS demands Sailing). When borders of a war enemy block trade, a naval blockade can override this. 124
- When mountain peaks block off part of a landmass, the parts are treated as separate continents. This is relevant for the placement of Barbarians, colony maintenance and wonders that affect only one continent; though the main point is to make things easier for the Al. 030
- Map generation: Clusters of Gold or Gems made less common. No Flood Plains on the corners of rivers. Hidden resources are disregarded when assigning starting locations, meaning that resources are no more likely to be revealed near a starting plot than anywhere else. Starting locations worsened a bit overall. <u>108</u>, <u>129</u>
- When a plot with unfinished Worker builds is left alone for more than four turns, the invested Worker turns begin to decay. This is mainly to disincentivize pre-chopping. <u>011</u>
- Forest and Jungle provide only 25% defense, and none if the tile is owned by the attacker. <u>012</u>
- Workers can no longer chop Forests and Jungles on unowned tiles. 119
- All evacuates land units that can't defend well from cities that are about to be attacked and untenable. <u>139</u>
- When the AI has more happiness or health than it needs, it may refuse to accept resources in trade or may trade away its only copy of a resource.
- Hereditary Rule grants 1 happiness per every 2 military units and +25% happiness from resources. 912c
- Granary stores only 40% food, but provides food also after starvation. 160
- Financial trait grants +1 commerce only on tiles with a natural yield of at least 2 commerce or a total yield of at least 3 commerce.
- Praetorian strength reduced from 8 to 7, cost from 45 to 40, starts with March, still no city attack bonus, and renamed to "Legionary".
- Quechua has no bonus against Archers; cost is 15 (was 20 in K-Mod). 907b
- East Indiamen is a unique Frigate with 3 cargo spaces and +1 speed. Increased bombard rate of Frigate. 905b

- Galley, Trireme and Caravel +1 move. Cost of Galley and Trireme reduced from 50 to 45. Cost of Transport reduced from 125 to 100 and can't attack. Trireme has strength 3, but gets no bonus vs. Galley. 905
- Attack Submarine and Submarine (now called "Nuclear Submarine") switch places in the tech tree. Both units get 6 first strikes, which should make them more dangerous for Battleship, and Destroyer gets to ignore first strikes. Battleship costs 250 instead of 225.
 Stealth Destroyer receives the same anti-air and anti-submarine abilities as Destroyer and 1 cargo space for missiles, but also a cost increase from 220 to 270. 906
- When playing with "Minimize Pop-Ups" (recommended): If more than 3 messages would be displayed at the beginning of a turn, the Event Log is opened instead. In the Event Log, a special entry "Older messages" marks the end of the unread messages. Great Person births in faraway lands are no longer reported. 106
- "Show friendly moves" and "Show enemy moves" (player options) cause much less delay during AI turns: I've disabled most of the pointless AI patrols and excluded Worker moves from being shown to the player. <u>102</u>
- Espionage slider not shown on the main interface if it's at 0. Can adjust the slider on the Espionage screen. <u>120c</u>
 - About other minor user interface changes, see <u>004</u>.
- The Spy unit can investigate rival cities as in Vanilla/Warlords. 103
- Get to choose from more civics and religions when using the "Change civics/religion"
 Spy mission, or when negotiating peace or trading with a vassal. <u>132</u>
- Wonders that have been removed from the production queue generate no "fail gold".
 Also no gold from Missionaries, Executives or when a teammate finishes a wonder. 123f
- Can no longer bypass the Theocracy restriction by gifting missionaries. 123a/dlph.4
- Switched the no-war-probability of Roosevelt and Darius, meaning that Darius can start wars when pleased, and Roosevelt – normally – cannot. <u>005a</u>
- "No Slavery" option that prevents human players from adopting the Slavery civic. 912d

Start Points as Handicap (SPaH)

The SPaH game option gives Advanced Starts only to the AI civs. You might want to use this option if:

- You find the game too easy on moderate difficulty, and dislike the crass ongoing Al bonuses on the high difficulty settings, perhaps for reasons of immersion. A big head start for the AI can be taken to mean that the AI civilizations emerged earlier than yours, like how the Romans appeared later than the Egyptians, whereas the ongoing AI bonuses on Immortal are hard to explain or overlook.
 - A big AI head start can narrow down the viable strategies in the early game though. It helps to assign start points unequally to the AI civs because this leaves some targets for early warfare, and a few far-ahead AI civs can't build all the early wonders.
- You find the game too easy on moderate difficulty, and dislike the big AI head start on the high difficulty settings (e.g. a free Settler and Worker on Deity), perhaps because it makes the early game too tense and narrow (see above). Since Advanced Start

replaces the AI freebies from the difficulty setting, you can reduce the AI head start by setting a modest amount of AI start points, e.g. Deity with 400 start points.

• You don't want every AI civ to receive the exact same freebies because this creates some distortions; for example, the Zulu get one additional tech (Archery) on Immortal instead of three because they start with Hunting and Agriculture in any case.

Usage:

Not entirely intuitive because, sadly, the Custom Game screen can't be modified apart from adding checkboxes. You'll need to check the "Advanced Start" option in order to unlock the "Base Points" box; without Advanced Start, the SPaH option has no effect. If you enter at most 9999 Base Points, then each AI civ simply receives the amount of points entered.

If you enter a five- or six-digit number, SPaH assigns start points unequally. The box is then assumed to contain two distinct numbers: a percentage in the two digits to the right and an integer in the three or four digits to the left. E.g. 80050 means 800 and 50%. The left number says how many start points the bottommost AI civ receives, i.e. the civ in the bottommost AI slot. The topmost AI civ (topmost AI slot) receives a *fraction* of the bottommost's points equal to the percentage. In the example, that's 50% of 800 = 400. The remaining AI civs receive values in between those two bounds. (Combined with Monarch difficulty, the 800/50% setting should be a challenge close to Immortal.)

SPaH never gives an Advanced Start to human civs, i.e. they start as normal with a Settler and Warrior or Scout. Humans receive starting locations based on the difficulty setting, i.e. the best ones on Settler and the (almost) worst ones on Deity. Then, if an unequal point distribution is used, the AI civs with the fewest points (top AI slots) are placed in the locations closest to the human civs, and the AI civs with the most points (bottom AI slots) are placed the farthest away.

Once the game has started, the start point distribution is shown on the Settings tab of the Victory screen. You'll also notice that the game doesn't start on turn 0. This is done to reinforce the notion that the human civs are late arrivals, and to have the game year match the overall development of the world.

An AI civ with a small number of points may have difficulties repelling a human Warrior rush, so I'd recommend against going far below 300. AI civs receive at least the 150 start points needed for a city, even if fewer points are entered. Unequal distributions are incompatible with team games, which is to say, they should technically work, but the assignment algorithm makes no effort to balance the teams' start points and locations. See 250b about how to enable Advanced Start and SPaH in scenarios.

General changes to Advanced Start (250c):

BtS allows start points to be converted 1:1 into production, which is usually far better than a 1:1 conversion into research. In order to make technologies a bit more attractive in Advanced Start, I've changed the conversion rate to 1:1.5 for production, meaning that cities, units and buildings now cost 50% more. Improvements, visibility and culture still seemed overcosted in comparison, so I've lowered the costs of these a bit.

Advanced Start costs are no longer adjusted to the game speed setting. This makes it unnecessary to manually adjust the start points entered on the Custom Game screen to match the game speed. When playing without SPaH and on a difficulty higher than Noble, the AI receives more start points than entered. This was apparently intended by the BtS developers but not correctly implemented. Conversely, human start points are no longer

adjusted based on difficulty (this was working in BtS); humans get exactly as many points as entered.

For reference, the AI freebies for each difficulty setting, and the number of start points that would be needed in order to buy those freebies given the above changes to Advanced Start costs and assuming Standard map size (tech is more expensive on larger maps):

Difficulty	Prince	Monarch	Emperor	Immortal	Deity
Free initial items per AI civ	1 Settler 1 Warrior	1 Settler 1 Archer 1 Warrior	1 Settler 2 Archers 1 Scout ^{see 250e}	1 Settler 1 Worker 3 Archers 2 Scouts	2 Settlers 1 Worker 4 Archers 2 Scouts
		Archery	Archery Hunting	Archery Hunting Agriculture	Archery Hunting Agriculture The Wheel
Worth in pts.	187	298	406	629	890

Includes 15 extra points for the 10 free initial production that the AI civs receive on all difficulty settings. In AdvCiv, the AI civs do not receive this free production after an Advanced Start. On Monarch and below, if an AI civ starts with Hunting, the Warrior becomes a Scout.

Rise and Fall (R&F)

If the R&F game option is enabled on the Custom Game screen, the game gets divided into several *chapters* (of history). During the first chapter, you play as the leader and civ set on the Custom Game screen (random also works). Once a chapter ends, you're asked to select one of the other civs in the game. During the next chapter, you control the selected civ, while your previous civ is controlled by the Al. After each chapter, a score is awarded that measures how much your civ has improved since the start of the chapter. If you manage to fulfill a victory condition, the game ends, and you score a premium, which is, again, based on the standing of your civ at the start of the chapter. To maximize the total score, you need to pick civs that are doing badly, but have the potential for improvement. If you play well, civs will "rise" under you control, and begin to decline after Al control resumes – this is the "fall" part. That is, unlike in the Rhye's and Fall mod, there is no special collapse mechanism. There is no connection with the "Rise & Fall" expansion for Civ 6. The <u>High to Low</u> challenge in Kael's <u>Assimilation</u> mod has been an inspiration.

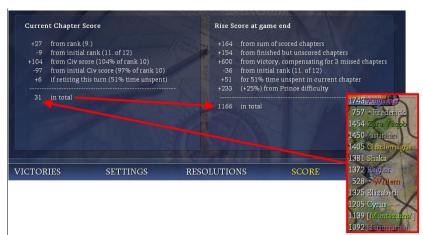

Supported and recommended game settings: Single-player only, no teams or Permanent Alliances. The number of chapters is 6 on Quick speed, 7 on Normal, 8 on Epic and 9 on Marathon, provided that there are enough civs in the game. Since a different civ is supposed to be played in each chapter and some are usually eliminated before the final chapter, it's advisable to configure at least 1.5 times as many civs as chapters. If you dislike playing on Huge maps, you can fit enough civs on a Large map (up to 16 I'd say) or even a Normal map (up to 12) if you set the sea level to Low (assuming a standard map script like Fractal or Continents). You may want to take a look at the "Score" tab of the Victory screen at game start in order to verify that the number and length of chapters is as intended.

I haven't tested unusual settings much, but R&F should, in principle, work with any map script and any scenario where the civs start without cities. Advanced Start should be fine too, but not <u>SPaH</u>. Later-era start results in fewer chapters.

R&F is intended to be played at a difficulty that makes it challenging to take a civ from a

rank near the bottom to a rank near the top over the course of a chapter. That's going to be about three difficulty levels lower than what would normally pose a challenge.

Objective: The objective is to maximize what I'm calling the *Rise* score. When the game ends, that score is computed as the sum of the *chapter* scores plus a premium for victory. What the scoreboard on the main interface shows are scores based on population, technology etc.; this score is computed as in BtS, and I'm calling it *CIV* score to distinguish it from the chapter score. Chapter score is based on the change(!) in CIV score

The CIV score from the scoreboard on the lower right feeds into the chapter score on the left of the Score tab, which feeds into the Rise score on the right of the Score tab.

and rank since the beginning of a chapter. Once the game ends, the final rank between "Dan Quayle" and "Augustus Caesar" is computed from the Rise score. (In non-R&F games, the rank is computed from the CIV score and game end turn.)

Delayed scoring, AI changes: A chapter isn't scored right after it ends, but during the subsequent chapter. This is done to disincentivize shortsighted plays toward the end of a chapter, e.g. conquering cities that aren't tenable in the long run. The first chapter is scored in the middle of the second chapter. With each chapter, the scoring delay decreases a little; the penultimate chapter is scored one quarter into the final chapter. The exact turns on which scoring happens are shown on the upper half of the Score tab. On those turns, a popup with a breakdown of the chapter score appears.

A side-effect of delayed scoring is that you have a stake in two civs during the first portion of each chapter: the one you're currently playing and the one from the previous chapter. This creates an awkward incentive for helping the civ from the previous chapter. Similarly, toward the end of a chapter, there can be an incentive for helping whichever civ you're going to take control of in the next chapter. In order to limit such collusive help, I've made the following changes to the AI:

- Doesn't accept unsolicited gifts, and asks for gifts less frequently than normal. No units can be gifted.
- Rejects offers that are heavily lopsided in favor of the AI. This can also mean that the AI refuses to make peace in exchange for a valuable technology.
- Is reluctant to get paid for things of questionable value to the player: civics and religion changes, embargoes, sponsored war and brokered peace.

These restrictions don't apply: to civs that have already been scored; to vassals of the player; nor to any civs that outrank the player on the scoreboard. During the final chapter, the restrictions only apply to the civ from the penultimate chapter (until that civ is scored).

Intermediate periods: In between every two consecutive chapters, there is an "intermediate" period of 5 to 10 turns (depending on game speed) during which you control no civ. During an intermediate period, most elements of the user interface aren't updated, meaning that you have practically no vision and agency. A countdown on the upper right

shows how many turns remain until the start of the next chapter. The main purpose of the intermediate periods is to prevent military cooperation between the civs played in two consecutive chapters.

Civ selection: When an intermediate period ends, you're prompted to select a civ for the upcoming chapter. Each civ should be played for at most one chapter. Sometimes, this is impossible because too many civs have been eliminated already; therefore, it's allowed to play the same civ repeatedly, but the chapter score is halved then. Playing the same civ for two chapters in a row is not possible, and any vassals of the most recently played civ are off-limits too.

The selection popup lists civs in order of recommendation: First, non-vassals not previously played, inversely ordered by rank, then, vassals not previously played and, last, civs previously played. Civs

Popup for civ selection

known to any previously played civ are listed by name, the others as "unknown". Hovering over an entry shows the civ's current CIV score, whether it's a vassal, and if so, if capitulated or voluntary and the identity of the master, and lists any war enemies. A victory stage between 1 and 4 is shown if the civ is close (at least stage 3) to fulfilling a victory condition. All this information is provided even if the name of the civ is unknown. It's often unwise to take over a civ that is at war with a stronger opponent. If you select a voluntary vassal, you'll be able to cancel the vassal agreement at any time. As a capitulated vassal, you'll have to acquire enough land and population in order to break free.

Chapter scoring function: The computation of the chapter score isn't entirely simple, but it should suffice to know that the more the CIV score has increased between the start of the chapter and scoring, the higher the chapter score.

 When a chapter is scored, 0 to 100 points are awarded based on the rank *r* of the scored civ on the CIV scoreboard at the time of scoring:

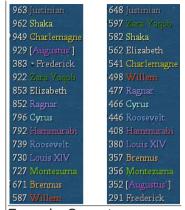

Chapter score breakdown (Score tab)

100 * (worst rank - r) / (worst rank - 1)

That's 100 when ranked first (r=1) and 0 when ranked last. In this context, the civ currently controlled is always considered to be ranked behind the civ that is being scored; this way, success in the current chapter can't hurt the score for the previous one. A score for the *initial* rank, i.e. the rank at the time that the scored civ came under human control, is computed in the same way, and subtracted from the score for the current rank. Thus, the total score from rank is maximized (100 points) by starting in the last place and climbing all the way to first. A civ that starts in rank 1 can at best gain 0 points from rank by staying in rank 1, and otherwise loses points.

 Points are also awarded directly for CIV score; otherwise, it would be pointless to continue a chapter when it's clear that the current civ can't climb another rank. The CIV score of the next best rank is used as a point of reference. In the example on the right, Rome is currently fourth, so its score of 929 is divided by that of the fifth rank (Ethiopia, 922), and the resulting percentage (101) is added to the chapter score. At the start of the chapter, Rome's score of 352 was 65% of the fifth rank (Charlemagne, 541), and that percentage is subtracted, resulting in a net gain of 36 points from CIV score.

• If the chapter was ended prematurely through retirement (see "End of chapter" below), the chapter score from rank and CIV score is increased by half the percentage of the turns remaining at the time of retirement. For example, if 14 out of 65 turns remain, the portion of unspent time is 22%, so the chapter score is increased by 11%.

Example: Current scoreboard (left) and scoreboard at the start of the current chapter

If the bottom line is -10 or worse, a square root is applied in order to reduce the loss of points. This is done so that a single failed chapter can't ruin the total Rise score.

End of chapter: All chapters have the same length except for the last one, which can be a bit longer or shorter than the others. The chapter length depends on the number of chapters and the game speed. To see how many turns remain, hover the mouse over your civ's flag on the main interface. During the last three turns of a chapter, a countdown is shown directly on the main interface, and at the beginning of the final turn, there is a popup reminder.

As the end of a chapter approaches, you should try to put your civ in a state that its Al leader can work with because the civ comes under Al control for some time before scoring happens. E.g. Gandhi might not continue your war of conquest. Don't rely on preprogramming decisions for the Al: When the Al takes over, the mod clears your slider positions, governor settings and the queues for city production, research and unit missions.

You can end a chapter early by selecting "Retire" from the main menu. This button, which normally concedes the entire game, works very differently with R&F. By retiring early, you earn a bonus to your chapter score (see "Chapter scoring function" above) and the chapter continues on AI Auto Play until its regular end turn. One situation in which retiring makes sense is when your civ is getting so far ahead of the others that the AI might run away with the game once the chapter ends.

Chapter	rs .	1		
	Zululand	Turn 0 to 64 (1440 BC)	57 points	Scored on Turn 118
2	England	Turn 73 to 137 (540 AD)	107 points	Scored on Turn 191
3	Rome	Turn 146 to 210 (1500 AD)	154 points	Scored on Turn 264
4	Aztec	Turn 219 to 283 (1826 AD)	31 points (turns remaining: 34)	Scored on Turn 337
		Turn 292 to 356 (1936 AD)		Scored on Turn 410
6		Turn 365 to 429 (2009 AD)		Scored on Turn 483
7		Turn 438 to 499 (2049 AD)	?	Scored on Turn 499
		Total so far:	349	

List of chapters on the Score tab, showing start and end turn (with end year), chapter score and scoring turn for past chapters, the current chapter and future chapters. The chapters with score values in bold have already been scored; score values not shown in bold indicate the score that would be awarded if the chapter were scored right now.

Game end: The game ends immediately when one of the BtS victory conditions is fulfilled by any civ. If the previous chapter hasn't been scored yet, it is scored now. If an AI civ wins, then the current chapter is scored as well and the Rise score is simply the sum of the

chapter scores. If the human civ wins, then the current chapter is not scored, i.e. rank and CIV score don't matter. Instead, a victory premium is added to the total score of the earlier chapters. This is, once again, a bit complicated; in short, the incentive is to win as early as possible if it can be done from a poor position, but not to win a quick victory by picking a civ that is already about to win.

- Premium *P*: 150 points plus 150 for each chapter that hasn't started yet.
- The premium above is reduced based on the rank r_0 at the start of the chapter (initial rank) by subtracting

```
(P/1.5) * (worst rank - r_0) / (worst rank - 1).
```

However, even when the initial rank is 1, the premium is never reduced below a lower bound of P/3.

+164	from sum of scored chapters
+154	from finished but unscored chapters
+600	from victory, compensating for 3 missed chapters
-36	from initial rank (11. of 12)
+51	for 51% time unspent in current chapter
+233	(+25%) from Prince difficulty

Rise score breakdown (Score tab)

- In the endgame, score isn't a good measure of a civ's standing. Therefore, whenever R&F considers ranks, those civs close to a victory condition (stage 3 or 4) are considered to be ranked higher than those not close to any victory, and civs at stage 4 outrank those at stage 3. (Victory stages were introduced by the BBAI mod as an Alinternal heuristic.)
- Regardless of the initial rank, the percentage of turns remaining in the chapter in which victory has been achieved is added.
- Finally, the Rise score is multiplied by a factor based on the difficulty setting.

On the Hall of Fame screen, the Rise score is shown in the "final score" column. Use the "score victory" filter in order to display only results of R&F games.

A defeat of the human civ does not cause the game to end unless it happens in the final chapter. Instead, human defeat causes the game to continue on Auto Play until the chapter ends, and then a new civ is selected as normal. A defeated civ is scored immediately and is treated as having 0 CIV points.

PerfectMongoose (PM)

The PM map script is based cephalo's <u>PerfectWorld3</u> (PW3), which employs models of plate tectonics, wind patterns and hydrology. The basic ideas are best described in the old CFC <u>thread</u> for PerfectWorld2 (PW2). LunarMongoose ported PW2's successor PW3 from Civ 5 to Civ 4, incorporated changes by AlAndy and Fuyu, and made changes of his own, which are listed in the PM thread on CFC.

- PM vs. Tectonics: LDiCesare's Tectonics script, which is included in BtS, also models plate tectonics and wind, but, as far as I can tell, in simpler ways. PM has about three times as many lines of code as Tectonics does if that's any indication. An updated version of Tectonics is also included with AdvCiv (change id <u>021a</u>).
- PM vs. Totestra: <u>Totestra</u> is a PW2 fork by vktj. Totestra offers more custom map options than PM, but PM has a more advanced terrain generator.

I've customized PM (change <u>021b</u>) because I felt that the starting locations were too unbalanced and it played too differently from the standard map scripts. In particular, there was too little arable land and too much dense forest. <u>Civ 4 Reimagined</u> has changed Totestra in similar ways, and I've adopted some of those changes.

In many ways, PM can supersede the Fractal map script, but since PM tends to generate more continents and more chokepoints than Fractal, the space available for expansion tends to be distributed less evenly. Other caveats:

- Huge maps might take a couple of minutes to compute.
- The Old World Start option doesn't always manage to create multiple continents. If you get just one continent, the map is still playable – just be aware that a New World isn't guaranteed to exist.

I've removed the custom map options for using the (legacy) PW2 land generator and climate system, and the option to "break Pangaea with meteors". Instead, the script tries to break Pangaea if and only if the Old World Start option is set.

All-Al games

An all-Al game can be a quick way to to get an impression of the Al behavior in AdvCiv or to check how well the mod handles certain game settings. The procedure is as follows:

- 1. Make sure that cheats are enabled (CheatCode = chipotle in My Games\Beyond the Sword\CivilizationIV.ini). This is a prerequisite for Debug mode and Al Auto Play.
- 2. On turn 0, press Ctrl + Z to switch into Debug mode. This makes the entire map visible.
- 3. Unless the game is set to Noble or Prince difficulty, if you want your own civ to have the same starting conditions as the other AI civs, you'll have to use the WorldBuilder to give additional techs and units to your civ (if the difficulty is higher than Prince; see the table above the Rise & Fall chapter), or to all other civs (if the difficulty is lower than Noble).
- 4. Press Ctrl + Shift + X to have the AI take control of your civ. A popup lets you choose the number of turns to be spent on AI Auto Play. (A mnemonic for the shortcut: control is shifted to the AI for X turns.) AI Auto Play can also be interrupted through Ctrl + Shift + X, though you may have to press these keys repeatedly because key presses are not received reliably during AI Auto Play.

AdvCiv makes a few improvements to the Al Auto Play mod component (change id 127):

- The player's civ plays by the same rules as the AI civs; in particular it plays on the same difficulty level.
- While both Al Auto Play and Debug mode are enabled, messages about major game events such as declarations of war and conquered cities are shown as if the player's civ had perfect knowledge of the game state.
- Unless interrupted, AI Auto Play ends at the start of a human turn. This means that no diplo popups can occur on that turn. (That said, it can still happen that the player is prompted to vote on a UN resolution right after AI Auto Play ends.)

Known issues

- No known serious bugs. It can't hurt to set a narrow AutoSaveInterval in My Games\ Beyond the Sword\CivilizationIV.ini. If <u>UWAI</u> (which contains the bulk of the new code) causes an error, that component can be disabled even in a running game by saving, exiting and setting either UWAI_IN_BACKGROUND OF DISABLE_UWAI in Assets\ XML\GlobalDefines devel.xml, and then restarting and reloading.
- Networked multiplayer has only been tested through AI Auto Play. K-Mod is known to be a stable multiplayer mod, it's just my additions that I'm concerned about, particularly the use of floating point numbers (cf. <u>003g</u>). I've never tried PBEM and PitBoss. Hotseat has been tested a little.
- Some of the Custom Game settings have been tested only superficially through AI Auto Play, and, of course, I haven't been able to test every combination of settings.
- If the mod folder "AdvCiv" is renamed, the name also has to be changed in Assets\XML\Art\CIV4ArtDefines_Misc.xml and (twice) in Resource\Civ4.thm. Otherwise, the mod will crash while loading: "Failed to initialize the primary control theme". This is a side effect of change <u>002b</u>. This change is also the reason why AdvCiv can't be installed in My Games\Beyond the Sword\Mods.
- The current version of the mod can load savegames from earlier versions, but no savegames from other mods, nor from unmodded BtS.
- Translations: German translations are complete (I think), though hardly tested. I don't recommend playing in one of the Romance languages as I've only translated parts of the new game text and the Civilopedia wouldn't reflect the gameplay changes in AdvCiv.
- One player has reported a potential issue with AdvCiv and Windows 7 user account control, so I've listed some steps that might help: <u>link</u>

For developers

The modified source code files are available on <u>GitHub</u>. In all modified files, changes and additions are labeled in-line with "advc.id" or enclosed in XML style: <advc.id> ... </advc.id>, where id is one of several three-digit numbers that I've (somewhat arbitrarily) assigned to sets of related changes. In retrospect, I should've used a version control system from the beginning; I've been using GitHub only since the first release (v0.8).

Changes from K-Mod-Extended are instead marked with kmodx (these are also in K-Mod 1.45, but I had merged them into AdvCiv before 1.45 was released), and those adopted from DarkLunaPhantom (Kek-Mod) with dlph. All changes from the LoR SDK ModMod are tagged with cdtw.

I've gathered bugfixes and UI tweaks that other mods could easily adopt *from* AdvCiv in this CFC post. Multiplayer mods may want to avoid adopting any AdvCiv code that uses floating point numbers (cf. 003g).

Developer documentation for UWAI is not included in this file; the changelog (id 104) only describes the integration of UWAI into BtS. Parts of UWAI are adjustable through AI_Variables_GlobalDefines.xml. If you've enabled logging (LoggingEnabled = 1 in My Files/My Games/Beyond The Sword/CivilizationIV.ini), you can change REPORT_INTERVAL in GlobalDefines_devel.xml in order to have UWAI log AI internals to My Files/.../Logs/uwai.log. The logs are formatted in Textile. I've been using Borgar Porsteinsson's Textile-JS to parse it (free web interface). In Debug mode (Ctrl + Z), AI war plans can be checked in-game by holding down the Alt key and hovering over the AI leaders on the scoreboard; same as in the BBAI mod. If UWAI_SPECTATOR_ENABLED is set to 1 in GlobalDefines_devel.xml and Debug mode is enabled, then announcements about AI war preparations are shown during AI Auto Play. Debug mode, WorldBuilder and AI Auto Play can be enabled in multiplayer through XML; see 135c for details.

If you compile a DLL allowing more than 18 civs (MAX_CIV_PLAYERS in CVDefines.h), be aware that AI turns may become prohibitively slow. In my latest test (v0.94) with just 18 civs, the first 250 turns of an all-AI game took about 17 minutes. This is faster than unmodded BtS (23 minutes), but slower than K-Mod (12 minutes). The difference from K-Mod is almost entirely due to the UWAI component and may increase steeply if more civs are added. I'm hoping to improve scalability in a future version by ruling out some potential war targets through simpler heuristics.

Changelog

Not a chronological record; the change ids are assigned pretty arbitrarily. Changes since v0.8 are also tracked through Git: commit history.

001	Minor bugfixes (not a complete list)
	Fixes merged from other mods: kmodx , dlph . 104z fixes a bug in CvPlayerAI:: AI_eventValue.

Corrected the city culture output shown during disorder by K-Mod/BUG with enabled Building-Actual-Effects option.

Al refuse-to-talk duration was lowered purely based on war success ratio in BtS, not absolute war success. This way, killing a single stray unit before stack combat could make the Al willing to talk. Added a lower bound for enemy war successes.

Barbarians no longer spare a single target city per continent from pillaging. In BtS, they apparently try to conquer that city intact. (CvUnitAI::AI pillageRange)

And Barbarians don't target cities protected by the Great Wall. (CVPlayerAI::AI findTargetCity)

Reduced the chance for building a "priority fort" from 80% to 20%, which, I suspect, was intended. (No clue if it's wise.)

Since K-Mod 1.44, Gunship had been able to capture cities if they contained a visible non-combat unit. Reported by Zholef <u>here</u>. Also fixed in K-Mod 1.45, but I've kept my own fix instead.

Eliminated AI civs can no longer do diplomacy. In BtS, there is a slim chance for this to happen right after an AI is eliminated by another AI.

Al no longer trades for resources needed only for obsolete units (merged from **Better BUG AI**).

Integer overflow when a large amount of culture is added through WorldBuilder. Thanks to xaster for pointing out the issue on <u>CFC</u>. Also fixed in K-Mod 1.46.

Attitude cache updated when the ranks on the scoreboard are updated.

The strategy overlay (dot map) shows up correctly after loading. Bugfix by EmperorFool: <u>source</u> *Tbd.*: Strategy overlay isn't cleared when regenerating the map. And stays disabled after Al Auto Play. And doesn't store the most recently selected color in savegames.

Cottages, Hamlets and Villages don't grow during disorder.

When enemy units and neutral unit are together in a tile, the unit model shown on the map is guaranteed to be an enemy unit. (K-Mod bug in CvPlot::updateCenterUnit)

A resolution for mutual defensive pacts can't be signed if all non-vassal members already have signed defensive pacts. (CvGame::isValidVoteSelection)

001b	Can't build air units in cities already filled with air units.		
Rationale	A bit of a judgment call; could argue that the cap should only matter when construction finishes, but this isn't practical.		
001c	Displayed GP birth probabilities computed based on current GPP per turn		
AdvCiv	AdvCiv BtS		
Corrected t	Corrected the birth probabilities shown on the GPBirth probabilities are based on the GPP		

bar (city screen and BUG GP progress bar). Now collected so far; no projection. The probabilities project the city's current per-turn GPP into the future.

Tbd.	other cities finishing their GP earlier.	oreseeable increase of the GP threshold due to And Golden Age length if currently in a Golden change the way the threshold increases; better to	
	calcPercentages in BUG's GPUtil. progress to be shown as a label on the	py still causes the GP type with the highest ne GP bar.	
001d	In Debug mode, the Top 5 Cities and Wonders tab and Religion, Civics and Espionage screens were not properly switching to the perspective of another civ because of some errors in the Vanilla Civ 4 and BtS Python code.		
See also	007 deals with other changes to Debug mode		
		p 5 cities (K-Mod: "Unknown" only if owner not list of high-culture cities on the Victory screen.	
Rationale	Not really a bugfix on second thought, but consistent with the K-Mod rule that unrevealed cities are secret.		
001e	No more stop-trading requests about a civ that has just stopped being worst enemy; and no offers for Defensive Pact from a civ that has just been attacked.		
Rationale	Because the AI can't immediately contact human players, the conditions for AI requests need to be checked again at the start of the human turn. This is handled outside the SDK and mostly works, but, apparently, some checks had been missing.		
001f	Foreign cities no longer become unrevealed upon conquest by a third party		
	r is conquered, it remains revealed to knew the city prior to conquest.	When a city is conquered, it is treated as a new city, revealed only to the new and former owner, and any third parties that happen to have visibility of the city at the time that it is conquered.	
Rationale	Hard to say if this is really unintentional. The BtS code explicitly sets the city to be revealed to the former owner. Were third parties not considered?		
	Doesn't make sense to me that third parties learn about the conquest, but not about the aftermath.		
001g	Deleted duplicate MemoryAttitude entries about Suleiman and all leaders after him in Civ4LeaderHeadInfos.xml (it's ordered alphabetically); used the mean when two values contradicted each other. Those before Suleiman didn't have duplicates.		

001h	Industrial bad health	
AdvCiv		BtS
When a building leads to bad health with certain strategic resources (Factory, Coal Plant, Industrial Park with Coal or Oil), the AI assumes that the city already has these resources when evaluating the effect of bad health.		Only bad health that the city will suffer directly, i.e. from currently available resources, is taken into account. E.g. Factory counts as just 1 bad health so long as Coal/ Oil aren't available.
doesn't have power yet, the AI treats the city's		The AI does not aim at keeping a health surplus available; just aims at balanced health given the immediate effect of the building.
Increased the (negative) weights of bad health and food deficit in building evaluation.		

	o more (or only minor) population ad health in Industrial AI cities.	Al ends up building Factories and Coal Plants before getting Oil and Coal. If health is just balanced at that point, once Coal and Oil are connected, the city is at -8 health. The Al then shrinks the population gradually by 8 to avoid wasted food (more with Industrial Park, not to mention Poisoned Water). BBAI and K-Mod have largely rewritten the building evaluation code, but this bit works as in BtS.
Rationale	Treating health as one less should lead to some leeway for later bad health, especially from power.	
See also	$\underline{160}$ makes Poisoned Water less dangerous, and $\underline{120e}$ improves the AI response to that mission.	
Tbd.	The bad health effects are badly balanced. Too much at once, bad health for no reward (Factory doesn't actually get better with Coal or Oil), punishing for tall strategies. Shouldn't even be possible to build a Coal Plant without Coal.	

001i	Replaced a couple of isOpenBorders calls with isFriendlyTerritory – had apparently been missed when BtS introduced vassal agreements (which allow passage even without an OB agreement). All evaluation of Missionaries should be improved now.
001j	Deleted two (K-Mod) calls to CvPlayerAI::AI_getNumTrainAIUnits because CvPlayerAI::AI_totalAreaUnitAIs already counts those units.
See also	017 fixes a bug that also has to do with confusing these two function.

001k	Al plot-danger no longer (indirectly) checks isMadeAttack	
AdvCiv		BtS
When the AI checks whether a plot is in danger of being attacked by a unit, it doesn't check whether that unit has already attacked this round. As a side effect, the AI may not be able to tell that shelf ice plots are in no danger from nonsubmarine ships. Rationale Vanilla Civ 4 did not check for an earlier attacked this clause. BtS added this clause. BtS added this clause. BtS added this clause.		
	another civ will be able to attack on that other civ's next turn; it doesn't matter if the unit could <i>immediately</i> attack. Perhaps the BtS developers hadn't realized that the MadeAttack flag persists for an entire round of turns.	
Hard to say how significant this bug is; the plotDanger functions a of contexts. I don't remember how I noticed it; some situation in whunderestimated plot danger.		
See also	Using the canBeEntered function fro	om change <u>030</u> since v0.90.

0011	Fixed an inconsistency in the AI trade value modifier for gold
------	--

See also	Obsoleted by <u>036</u> . Financial trouble no longer affects the trade value of gold.	
AdvCiv		K-Mod
trade value d human propo	of gold regardless of whether a	When one side is in financial trouble and the other isn't, the AI can be brought to propose deals that it won't accept if the player proposes them.

001m	Scoreboard gets updated when a leader name changes	
AdvCiv		BtS
When the player enters a different leader name (Alt + D), the name is immediately updated on the scoreboard after clicking "OK".		The scoreboard isn't updated until end of turn unless the player manually closes and reopens the scoreboard.

The usual cause	es of out-of-sync errors in networked multiplayer are these:
(SorenRandle causes them	(invoked by user input) modifies the game state. All uses of the sync'd PRNG Num) modify the game state. Some Al functions have a bAsync parameter that in to use the asynchronous PRNG (AsyncRand) instead. Also tricky: Functions that return value. There are only a few of these (AI baseBonusVal,
	efenceStrength, AI_techBuildingValue and AI_obsoleteBuildingPenalty, all
	AI, CvPlot::getFoundValue, CvCityAI::AI_buildingValue and maybe a few
,	most have a bConstCache parameter to prevent the cache write. I think the cache dn't actually be a problem if the caches were reliably invalidated, but the formulas

(b) Uninitialized memory

001n

(c) Use of getActivePlayer in global code (not invoked by user input)

depend on so many variables that this is impossible to do.

(a) and (b) are also problematic in singleplayer.

Comprehensive guide by Gerikes about avoiding and debugging OOS errors: CFC thread

CFC post by karadoc on the subject of OOS errors: link

Potential OOS bugs (just 2 so far)

Some posts by EmperorFool: link

By Nightinggale: <u>link</u>

I've disabled some Debug text in multiplayer that was calling CvPlot::getFoundValue because that function doesn't look safe (see (a)).

See also	See <u>007</u> (logging), <u>135c</u> (Debug mode) and <u>127</u> (Al Auto Play) about multiplayer	
	debugging.	
	See 003g about issues with floating point arithmetic.	
	Open K-Mod issue concerning (a): link. I think 036 addresses this.	
Tbd.	I guess I should merge the debug tool by Nightinggale (see his guide linked above).	

001o	Military happiness only from units of the same team or vassal/master	
AdvCiv		BtS
		Any (non-hostile) units cause military happiness.
Hereditary Rule can receive happiness from		

	s only if those units belong to the as the city or to a vassal or master of	
Rationale Comes up rarely, but highly counterintuitive when it does.		

001р	Crash when loading a smaller game from inside a larger game	
AdvCiv		BtS
Reset the data of all cities early in the loading process.		The logic for loading savegames is partly outside the SDK, but the issue appears to be this:
		Cities remain untouched during the first stages of the loading process. As general game data and civs are being reset, the UI keeps getting updated, based on data about cities that are no longer consistent with the other data. This can result in a crash when the camera is near a city of a civ with an id greater than the highest civ id in the game that is being loaded (CvCity::getMusicScriptId), but apparently also in other circumstances (CvCity::isVisible).
Tbd.	Was going to add the bugfix to my <u>list</u> of easy-to-adopt AdvCiv changes, but can't seem to reproduce the error anymore in unmodded BtS. Also still needs to be tested in multiplayer.	
See also	This CFC thread seems to describe	e the bug. (No one posted a fix.)
001q	The price charged by the AI for an embargo was counting all deals of the AI, not just those with the embargo target. (bug in vanilla Civ 4)	
001r	Corrected AI computation of anarchy length in CvPlayerAI::AI_doCivics. (K-Mod bug)	
See also	131 makes further changes to the switch-civics AI. I've posted about this bug on the K-Mod subforum: link (under No. 1, "Update")	
001s	Some code that uses <code>canDefend</code> doesn't seem to take into account that all non-land units are defenseless against land units (yet <code>canDefend</code> returns true for all ships except Work Boat). One such oversight (in K-Mod code) causes the AI to ignore hostile units when stationing idle ships.	
See also	139 further improves the AI code for keeping ships safe from land units.	
001t	Preliminary fix for the following issue in K-Mod: After declaring war, an AI stack may decide to use a different path, even one for which no DoW would've been necessary. If this occurs, the AI now sticks to the original path (if it's legal) for at least one more	

	turn so that a stack that triggers a DoW will immediately enter an enemy tile.	
Rationale	The fix is more about concealing the problem than making the AI smarter; a DoW without crossing a border is a clear mistake, sticking to a suboptimal path isn't.	
Tbd.	I don't see how the DoW affects the best path; perhaps something in the pathCost function (CvGameCoreUtils.cpp). Whatever it is, the pathfinder should anticipate that effect.	

And a fix for a related bug: K-Mod sometimes lets stacks of attackers move to an enemy city when war is imminent. Since these stacks aren't supposed to start the war, this doesn't normally make sense.

(001u	Fixed: K-Mod code had failed to recognize units as obsolete when evaluating a	
		strategic resource that it didn't have access to yet. This had sometimes led the AI to	
		cancel and renew trades for strategic resources (especially Horse) every 10 turns.	

001v	Bugs reported by CFC user vedg.	
See also	046 and 905b address other issues (not bugs, strictly speaking) reported by vedg.	
AdvCiv BtS (presumably also broken in Vanilla Civ		BtS (presumably also broken in Vanilla Civ 4)
When a civ agrees to change both its civics and its religion in a single trade, all changes are applied immediately in a single revolution. The anarchy adds up.		Same if the religion change is added to the trade before the civics changes. Otherwise, only the civics changes are applied.
Rationale	Rationale See my reply to this post.	
K-Mod bug: When a city finished a unit whose national limit was reached, overflow gold equal to that unit's production cost was paid.		
See also	See also Thread with the bug report.	

001w	UI updates ("dirty" bits)		
AdvCiv		BtS	
When the happy or healthy status of a city changes through a resource trade, the indicators on the city billboards are updated.		Usually works – I guess the trade screen (not part of the SDK) does this? But not always. E.g., at least one time, an unhappy indicator appeared due to trades canceled by the AI and was not removed in response to subsequent trades during my own turn.	
After a declaration of war, cached waypoint markers are updated.		After declaring war on a civ that the player didn't have Open Borders with, the cursor is shown in red when plotting a move into an enemy nonborder tile. (At peacetime, this is correct – a move into a border tile triggers the declare-war popup.)	

002	Cosmetic changes

Credits	Merged a few non-functional changes from Roamty's Unofficial Patch 1.7 (<u>link</u>). Not marked in-line because the changes are too minor.
002a	Minimap shows lighter player colors than in BtS on water tiles (like in Military Advisor), and slightly more opaque colors on land tiles. No units are shown on the minimap.
Rationale	CFC forum post (also with screenshots).
	When Desert and Forest shine through too much, player colors can become hard to distinguish.
	Units: Can't make them out properly anyway, and can't tell how many there are because each stack is shown as a single blob.
Config	Switch in GlobalDefines_advc.xml. Also allows uncolored water tiles like in Civ 3.
See also	dlph.21 shows Barbarian territory on the minimap.
002b	Increased font sizes.
	Shortened some leader names, e.g. "Augustus Caesar" \rightarrow "Augustus" when used outside of Civilopedia.
	Shortened "Native American Empire" to "Amerindian Empire".
Rationale	People play on rather high resolutions nowadays, and the fonts don't scale properly.
	Long leader names take up (even) more room with the larger fonts. This is a problem for Native America because the text covers up the civics icons during diplo (at least on my 5:4 display). Would be better to use only short descriptions there, but that seems to be programmed outside the SDK.
Config	The font-size change can be reverted by removing the Resource folder and Assets\ XML\Art\CIV4ArtDefines_Misc.xml.
Credits	Inspired by <u>VIP</u> mod and I also took a look at vincentz's setup. This <u>tutorial</u> was helpful, although neither the downloadable package nor the code in the tutorial actually worked for me.
	This post by CFC user hagnat helped me fix some Vanilla Civ 4 and BtS errors in the theme files, though I don't think these errors were actually causing any problems. They did lead to confusing log output. See also this conversation on CFC.
Tbd.	Can't seem to change font sizes without defining a custom theme, which appears to mandate copying 25 thm text files. I was at least able to avoid copying all the tga files, which make up 15-30 MB – this would've been prohibitive for distribution.
	I think there may be a way to make this work by copying just one or two files, but I can't figure it out (and I don't think other modders have).
	Had to hardcode the mod folder name in $Assets\XML\Art\CIV4ArtDefines_Misc.xml$ in order to plug in the custom theme.
	Several boxes are now a little too small for their text and could use some adjustment. The help text area should be a little wider; has some stupid linebreaks for units with many promotions. Perhaps not possible outside the EXE; HELP_TEXT_MINIMUM_WIDTH doesn't do the trick.
002c	Added a couple of translations for K-Mod game text entries.
Credits	Also merged translations by Zholef. I haven't marked these changes in the XML files.
002d	Changed the icon of the specialist-commerce ability introduced by K-Mod 1.45 to show a Scientist; was Citizen. (Depending on which commerce type gets increased, the icon could also show a different specialist, e.g. Engineer for production.)
002e	Disabled glow effect on units ready for promotion except for the currently selected unit and foreign units.
Rationale	Too obtrusive. Players don't select units just to assign promotions; they select them in

	order to move or heal, and assign promotions at that opportunity. No need to constantly indicate unassigned promotions on the world map.		
	The glow is needed on foreign units because there is no other way of telling that a foreign unit has unassigned promotions. Shouldn't be a secret either. (Rarely relevant in singleplayer as the AI always assigns promotions right away.)		
Config	Can be toggled in GlobalDefines_a	dvc.xml	
002f	Changes to city icons: Defense icon icon removed.	moved behind the defense modifier; city network	
Rationale	Should be easier to guess now that the tower icon isn't some status indicator, but just stands for the word "defense". The city network icon is at best helpful in the early game, though probably not at all for experienced players (and inexperienced players may be unaware of the icon). Can always look at the list of trade routes on the city screen or consult the Trade layer.		
002g	Changes to Main Menu (the one that	opens right after launching BtS)	
AdvCiv	BtS		
In-game ma	ain menu called "Game Menu".	Called "Main Menu", same name as the menu where you go after "Exit to Main Menu".	
Updates" (in the "Advanced" submenu). Update site ha		"BtS Content" leads to an empty screen. The Update site has long been disabled – hangs for some seconds, then reports that the game is up to date.	
Rationale	Can't remove the dead items (handled by the EXE), so it seems that the best I can do is show the text in gray.		
	I had "Play Now! and "Play Scenario" grayed out at first, but "Play Now" shows descriptions of map scripts that aren't visible elsewhere and there's a preview screen for some map types and scenarios (though a pretty bad one).		
	Could rename "Custom Game" to "New Game (Randomized Map)", "Play Now" to something like "World Picker" and "Custom Scenario" to "New Game (Scenario)", but think players are so used to selecting "Custom Game" that this would be an inconvenience.		

002h	Changes to textures			
Credits	I've worked from textures in the <u>Blue Marble</u> (BM) design.			
AdvCiv		BtS	ВМ	
all terrain tex Snow and Pe middle grour BM. I think m saturated tha BM. Coast is than Ocean. I've also ado	nd color balance of ctures except Hill, eak, aiming at a nd between BtS and ny colors are less an either BtS and quite a bit brighter pted the water- errain textures from	The BtS textures have bright colors. They're easy to distinguish except perhaps Coast and Ocean.	Much darker colors than in BtS; Coast and Ocean somewhat hard to distinguish. Also changes several non- terrain textures that depict water (e.g. irrigated farm) to match the new color of water.	

Dark green Forests, medium green Jungle, light green Grassland.		Bilious green Grassland and Jungle, medium to dark green Forest.	Dark green Forest and Jungle, medium green Grassland that contrasts very strongly with river banks.	
though relief	to the texture detail, is might be more to the lower color		More detailed texture reliefs. Makes Grassland in the fog of war and non-fogged Jungle a bit hard to distinguish.	
Clouds disak	oled.	When zooming out far, passing clouds are shown; these clouds also cast shadows.	No shadows; denser, more realistic clouds.	
the map.	o textures outside	Civilopedia and the "Play Now!"	Adjusts these textures to match the BM style. (Compressed size: 6 MB)	
	BM resource d also toned down t and Silk.	World Picker screens for illustration.	Less garish textures for Banana, Rice, Gems and Uranium.	
Roads light brown. Railroads from BM, but with increased contrast for a dotted look.		Roads dark beige, Railroads light gray, difficult to tell apart.	Darker Railroads, no change to Roads.	
Rationale	I mostly wanted something that's easier on the eyes. Blue Marble is pretty good in the regard, but has some other issues (see above) and looks more different from BtS that it has to. I've also gotten the (compressed) file size down to 5 MB from 15 MB. The BM reliefs look kind of nice, but more crayon-like grainy than detailed.			
	All three versions let Coast bleed far into adjacent Ocean, which can make it hard to tell where the Coast ends. Probably can't be helped because the player is – apparently – supposed to be able to tell when there is an unrevealed Coast next to a revealed Ocean.			
Config	Remove Assets\BML.fpk (renaming the file doesn't help) in order to use the BtS textures, or put a different fpk file in Assets (e.g. Blue Marble). If BtS textures are used, clouds should probably be re-enabled through RENDER_GLOBEVIEW_CLOUDS in GlobalDefines_advc.xml because that switch can't remove the shadows.			
	To modify my textures, BML.fpk has to be unpacked first, using <u>PakBuild</u> .			

002i Player color palette revised

See table below. The BtS palette is on top and the AdvCiv palette on the bottom. The empty cells happened by accident. The colors labeled as unused are only used as secondary colors (when multiple leaders of the same civ are in one game), and light black (lower right corner) is entirely unused. I've been less careful about making these colors distinct than about the primary colors.

Made a few colors like the Aztec's green (upper left) and the Persian's blue (top center) less saturated and thus hopefully less painful to look at.

Most colors shifted a little bit to make them easier to distinguish. All player text colors changed to be simply a lighter version of the player color. The darker the player color was, the more I've lightened the text color. (I think most of the BtS player text colors had been chosen in this way too, but some weren't, and now I can be sure it's consistent.)

	duckstab's btsColorEditor with its "Adjust" button could've been useful if I had k about it.						

002j	Changed the sizes of a few 3D models, especially ships.
Rationale	The sizes had already been scaled by hand, but a few units appeared oversized, especially Modern Work Boat. (Of course, all units are kind of oversized, and I've tried making them all 20% smaller, but that made them significantly harder to distinguish.)
Config	Through Art\Civ4ArtDefines_Unit.xml
Credits	Inspired by Elhoim's <u>Better Ship Scale</u> mod, though that mod makes the sailing ships look like nutshells, and the modern ships poke across the tile boundaries.
See also	905b increases the size of East Indiaman a bit because it's supposed to be bigger than Frigate.

002k	Put "AD" (Anno Domini) before the year number in all game text	
Rationale	I understand that "1500 AD" is acceptable, but "AD 1500" is more proper. Not fond of CE/BCE (the abbreviations are too similar to each other).	
Config	Through CIV4GameText_advc.xml	

002I	Play combat audio based on player's era rather than game era.
	I haven't checked, but, <u>apparently</u> , the sound differs for each era, and I think all erabased visuals depend on the (human) player's era, so it seems inconsistent to base the audio on the game era.

002m	Shortened combat animations		
AdvCiv		K-Mod	
game than in the early game, and combat animations per battle take about 30-50% less		From the K-Mod changelog (v1.29b): "Combat animations are now orchestrated to roughly correspond to the events from the actual combat mechanics. (It still isn't a blow-for-blow representation of the actual battle, but events in the animation will at least occur in the same	
Moreover, on the defense, starting in the Renaissance era, combat animations are cut short, meaning that they usually stop before one side has been defeated.		order as the events in the combat log.)" That is, the number of animated combat rounds is based on the number of entries in the combat log. In addition, it's multiplied by an XML-configurable base value.	
"Single Unit	: Grapnics" option (SUG) in single-	Looks like SUG doesn't affect the number of rounds, meaning that the two men are shown hitting each other for about 10 seconds.	
Config	GlobalDefinesAlt.xml (because that's where K-Mod's STANDARD_BATTLE_ANIMATION_ROUNDS is defined)		
Rationale	For attacks by the player, there's the "Quick Combat (Offense)" option is, but "Quick Combat (Defense)" makes attacks against the player difficult to follow, and animating them takes too long in the late game.		
	Sadly, the speed at which the animations are played can, apparently, not be modified. I think the EXE consults functions like <code>getSecsPerTurn</code> in <code>CvDLLUtilityIFaceBase.h</code> for this. (<code>CvUnit::getAnimationMaxSpeed</code> is called during combat but doesn't make any appreciable difference.) Can only speed animations up by making units die after fewer hits or by ending animations before one side has been defeated. The latter doesn't look nice, but the former just isn't enough when large AI stacks attack in the late game. And players still have the option to see fully animated combat on the attack.		
	Fewer hits per kill as the game progresses could be interpreted as weapons becoming deadlier.		
	down. I'm applying my change only to	leman takes bullet after bullet without going o singleplayer mode because I'm not sure if options could lead to synchronization problems in	
See also	Similar arguments in <u>this</u> CFC thread perhaps it does in BtS; not in K-Mod t	. Two users claim that SUG speeds up combat – though.	

002n	Flashing end-turn message disabled
AdvCiv	BtS

turn. No cha	message is shown at the end of a ange to the animation of the end-turn no change to flashing reminder	Once all units have orders and all popups have been dealth with, the end-turn button starts to pulsate and a flashing message "Press enter" is shown until the player ends the turn. The Reminders mod component (Alt+M) replaces the press-enter message with the reminder message set by the player.
Config	Through Civ4GameText_advc.xml	
Rationale	Helpful for first-time players, but a little annoying in regular games, and quite annoying when taking screenshots. Newbies should still be able to notice the (subtly) animated end turn button eventually.	
See also	106 suppresses the Autosave message (also through Civ4GameText_advc.xml).	

003	Minor refactoring, utility functions, comments about unused or otherwise dubious code; in particular:		
	AMREF and TEAMID that I use a lot to shorten code. E.g. (GET_PLAYER(ePlayer).getTeam())		
TEAMREF (EAMREF(ePlayer)		
and one fo	dded an inline wrapper CvCity::AI for casting CvCity pointers to CvCityAI references, r casting CvGame to CvGameAI – though that one is pretty much only useful inside op as all other classes obtain CvGameAI references through GC.getGame.		
See also	003g: Floating point arithmetic 003e (private copy-constructors) makes the cast to CvCityAI safer to use.		
Credits	CFC user Nightinggale suggested the inline wrapper <u>here</u> .		

003b	Misc. performance tweaks
See also	003d: Faster Quick Load 003f: Function inlining <u>045</u> : Rival buildings hidden on main interface.
Tbd.	I can't figure out why these two (seemingly unrelated) functions are called much more frequently in K-Mod than in AdvCiv according to profiler logs:
	CvPlayer::canBuild — took up 3 out of 14 seconds in K-Mod; more than 2 mio. calls, and virtually no time in AdvCiv.
	CvCityAI::AI_updateRouteToCity — took up more than half of K-Mod's time, called at least 4 times as often than in AdvCiv, and took 62 ms per call in K-Mod compared with 1 ms in AdvCiv.
	Is AdvCiv somehow paying elsewhere for the time saved on these calls? Is it using simpler but incorrect results? Why is AdvCiv (with UWAI disabled) still not noticeably faster than K-Mod? Or just an artifact?

003	С	Added an assertion that checks if XML data loaded through GC.getDefineINT actually	
		exists. Found just one (unimportant) error this way and corrected it. Had to change	

some calls that happened before XML was even loaded; no functional change.

003d	Faster loading of savegames	
AdvCiv	1	BtS
mode, the g	Shift+F8 to Quick Load in fullscreen game exits to the main menu for a pre loading the Quick Save slot.	When loading any savegame while playing in fullscreen mode, the game hangs on "Initializing" (doing who-knows-what) for a period of time that appears to depend on the complexity of the game state. Can easily be 30 seconds. This delay does not occur when loading from the main menu (nor when exiting to the main menu).
Rationale	ale This (apparent) bug has been long known, though these three <u>CFC threads</u> are the only web sources I can find that mention it. It's possible that it only occurs on some systems.	
	My fix only covers Quick Load. Since probably all I can do. Workarounds:	the "Load Game" menu is outside the SDK this is
	a) manually exit to the main menu be	fore loading; or
b) play in windowed mode; orc) press Alt+Tab two times when the delay begins. This seems to finish stage immediately.		
		delay begins. This seems to finish the "Initializing"
	Could easily replace the "Initializing" text with a recommendation to minimize the if loading is taking long. I've tested this and found it quite helpful because I keep forgetting about this. But the recommendation would also show up when generating, and this is misleading because Alt+Tab does not speed up the map script. The replacement text also needs to be very short; no room to explain that it only appropriate the savegame. Had to leave it at a regular loading screen hint (008) shows up randomly.	
See also 009 is a prerequisite because it repairs BUG code for finding the M where savegames are located.		rs BUG code for finding the My Games directory
	loading a savegame, but not when it's	ame start. They normally stay enabled when s done via the main menu. Therefore, 004m, bubbles, and 003d restores that status after

003e	Prevent accidental copying of objects	
AdvCiv		BtS
CvPlayer, CvTeam, CvGame, CvMap, CvEntity (base class of CvCity and CvUnit) and their subclasses are non-copyable, meaning that a line like		Calls to the (macro) functions GET_PLAYER, GET_TEAM, getGame and getMap are extremely common in the code base, and new code has to call them all the time too.
CvPlayerAI kPlayer = GET_PLAYER(ePlayer) leads to a compile-time error.		Such a line only leads to a runtime error, and one that is usually difficult to debug.
	Accidental copies are just something that comes with references as return values in C++, and I'm not going to make every class non-copyable that is returned as a	

reference somehwere, but securing these frequently used functions seems prudent.
Git commit by CFC user Nightinggale (We The People mod). He does it only for CvInfoBase, a class which is also very often returned by reference (getInfo). However, this also requires a change to each of the many CvInfoBase subclasses, which seems a bit excessive and makes it harder to extend CvInfoBase further.

003f **Function** inlining

Adopted from the We The People mod (Swati-007, Nightinggale). So far just for the CvArea class (Git commit, related Git issue). I don't think this is going to be a substantial improvement, even once it's done for more classes, but it's easy enough to do. My release DLL actually got smaller as a result, which might suggest that the functions were already being inlined.

003a Floating point arithmetic

I've added utility functions for dealing with floating point numbers, and I'm using floating point arithmetic for most of the new code that involves divisions. It's easier to read and less error-prone than the iSomethingPercent stuff. I also try to round values as late as possible in order to avoid rounding artifacts.

When I decided to use floating point operations, to my embarassment, I was not aware that this can lead to synchronization problems in networked multiplayer. That said, the std::pow function returns floating point numbers, and, in a game that's all about growth, exponentiation with fractional (subquadratic) exponents seems indispensable to me for the AI code. So going back to integer arithmetic isn't really an option. (Although: I guess one could write a pow function for integer percentages that supports only a small set of exponents and returns results from hardcoded tables.)

Tbd. I'll have to see how big the problems in multiplayer are. My old notebook (32-bit AMD

processor, Win XP) and desktop PC (64 bit, also AMD, Win 8) have produced the same game states in (singleplayer) tests on Al Auto Play. If Intel processors produce different results, I could experiment with Microsoft's controlfp function (or possibly the /fp:precise compiler flag):

"At app startup time we call: controlfp(PC 24, MCW PC) controlfp(RC NEAR, MCW RC) Also, every tick we assert that these fpu settings are still set: gpAssert((_controlfp(0, 0) & _MCW_PC) == _PC_24); gpAssert((_controlfp(0, 0) & _MCW_RC) == _RC_NEAR); There are some MS API functions that can change the fpu model on you so you need to manually enforce the fpu mode after those calls to ensure the fpu stays the same across machines. The assert is there to catch if anyone has buggered the fpu mode. FYI We have the compiler floating point model set to Fast /fp:fast (but its not a requirement)" source, similar advice, cf. MS library

These numbers could serve as a test.

004	Minor usability improvements
See also	 101 adds help text to the Nationality bar (city screen). 120c hides the espionage slider when it's at 0. 210 adds BUG-style alerts. 151 shows the previous religion or civic in messages about changed civics/ religions. 152 shows currently offered war trades on the Glance tab. 060 suppresses the add-to-spaceship popup. 048: combat odds help text
Micc	

Show the turns-left countdown only when at most 30 turns away from time victory (instead of 100);

inspired by RFCEurope.

Health from trait shown on city screen as "from Trait" instead of "from Civilization".

Settings tab (Victory screen) shows the initial number of civs and disabled victory conditions.

Announce when a tech that grants a free Great Person is first discovered. Credit: Civ 4 Reimagined <u>1.4</u>.

The trade table no longer shows "you must be joking" resources, i.e. resources that the other side already has (and doesn't need for a corporation). Can still find those resources on the Resources tab of the Foreign Advisor. K-Mod already excluded "cold, dead hands" cities.

BUG wonder list with color coding enabled by default.

BUG Glance tab (Foreign advisor) shows relations values by default, not Smilies. Reduced the column width in games with 18 civs a bit.

Upon closing the Military Advsior screen, the game forgets which players were selected. (BtS: Remembers which players were selected and selects the active human player in addition when reopening the screen.)

ALT key doesn't show combat odds when hovering over one's own units.

Peace treaties are canceled at the start of a round – players never have to do it manually.

		, ,
004a	UI support for the Discover ("bulb") al	bility
AdvCiv		K-Mod/BUG
The help text for the bulb button of a GP unit shows all techs that the GP will be able to discover if an additional tech is researched, e.g. "next tech: Astronomy (with Printing Press)".		The help text only says which tech the GP can discover right now.
GP Research on the Tech Advisor disabled by default.		BUG's "GP Research" option shows bulb paths on the Tech Advisor. Enabled by default.
Rationale For players who don't plan their bulbs (long) in advance, the added help text show usually suffice. I'd like to show only the tech tree on the Tech Advisor.		
Config	GP Research can be enabled on the	Advisors tab of the in-game BUG menu.
If GP Research is enabled, info about techs that a GP could currently discover is shown in the footer area of the Tech Advisor.		Shown to the left of the tech tree, overlapping with the first column of techs. This looks like a bug; the whole tech tree is probably supposed to move to the right a bit.
Credits Idea from RFC: Dawn of Civilization		
Rationale	Want to give the tech tree as much room as possible. Some Advisor screens use the footer for tabs, but since the Tech Advisor has no tabs, it's unused space.	
For each ty applicable:	pe of GP, the following info is shown if	
 Preference order: All techs that the GP could possibly discover, sorted by priority. 		• (same)
 Current tech: Tech that the GP would currently be able to discover. 		• (same)
 Missing requirements: Techs that have a higher priority than the current tech and don't require the current tech. These are techs that will replace the current tech if their preregs 		· ·

are researched. met. · After research: The tech that the GP would • (same) be able to discover if all techs currently Techs with lower priority than the current tech queued for research were already for which all tech requirements will be met discovered. after finishing all gueued research. Improved the help text a bit, though it's still a bit Difficult to guess from the help text (and layout) difficult to understand I think. how all this works. E.g. the "after research" techs are just called "Future Technologies". For optimal bulb paths, it can be necessary to avoid certain techs (example). I'm Rationale guessing that's why the BUG mod shows the lower-priority techs. Or the idea was to show which tech the GP would get if its current tech was discovered, but that's not always true (because the current tech could unlock another high-priority tech). So the BUG info is complicated and misleading. I don't think tech avoidance matters very often, and players that use this tactic probably have their bulb paths memorized or know how to figure them out from the preference order. The missing-requirements list should make the player aware of techs that the GP will be able to discover if one more tech is researched through other means. Example: If the current tech for a Great Scientist (GSc) is Compass, the player can switch his/her research to Compass to find out that the GSc will be able to discover Aesthetics once Compass is finished. This works the same way in BUG as in AdvCiv. But how to tell in BUG that the GSc could also discover Philosophy if Meditation was researched? AdvCiv lists Philosophy (and Paper) under "requirements missing". Config Implemented mostly in CvTechChooser.pv. AdvCiv No "can be researched by a (e.g.) Great Help text on a technology says whether that technology could currently be discovered by a Scientist" help text on technologies. particular GP. If the player does have such a GP, then the player can consult the Discover button of Rationale the GP to find out which techs it can discover. If the player doesn't have the GP, then, by the time a GP is born, the information may no longer be accurate. Most of the time, the help text is just distracting. If the player needs to know about bulb paths, he/she should consult the BUG Tech Advisor. 004b Found button shows projected health, city tile yield and increase in city costs Should also show free initial buildings (Palace, more with Medieval start or later). Thd. AdvCiv BtS The help text for the found ("Build City") button No such projection. Can only quicksave and shows how much the Total Expenses (Economics found to see how costs will increase. Advisor) will increase if a city is founded on the current tile. Does *not* project the gold income of the new city, e.g. from trade routes. The increase is computed as inflation times + maintenance for the new city, including State Property, vassal cities etc.

+ increased maintenance in other cities, including those temporarily exempt because of disorder or celebrations

+ decrease in unit supply and cost from the lost Settler

+ decrease in unit cost (from the +1 population)

+ increased civic upkeep

Tbd.	There's a small (rounding?) error of a	apparently at most 1 gold that I can't figure out.
from featur All features While a Se	ext on the found button shows health res, traits (Expansive) and freshwater. Is revealed in the (full) city radius count of titler is selected, the help text of any health effects.	
	on help text shows the projected city	City tile yield only shown once a city has been founded. Usually just 2 food, 1 production, 1 commerce, but occasionally more.
See also	016 changes the effect of extra yields	s from random events on city tiles.
004c	Changes to bombardment	
	ard at 0 defense in order to prevent e from recovering.	Can't bombard cities with 0 defense. If a city isn't bombarded for a turn, its defense begins to recover on the next turn.
Air units and siege units with the ability to ignore defensive buildings have their bomb(ard) rate increased to match the building defense. For example, when a city that has 100% defense from a Castle, but just 60% from culture, is bombarded by a Cannon (bombard rate 12), city defense is reduced by 20 percentage points. Units that ignore defensive buildings see 48% defense, the others 80%.		The ability of Wall and Castle says "+ defense (except vs. Gunpowder-based units)" and those Gunpowder-based units have the XML tag IgnoreBuildingDefense. However, Siege units with the tag don't actually ignore defensive buildings; they only ignore the bombardment reduction effect that Wall and Castle also have. In the example on the left, the Cannon player would see 60% before bombardment, and 52% after.
Rationale I wouldn't mind Walls and Castles having defensive abilities against post-Med units, but the implementation is unacceptable from a UI pov. By the Modern e often consist entirely of units that ignore building defense, and then the player gets to see the defense from culture, which somehow doesn't decrease as fas should.		ceptable from a UI pov. By the Modern era, stacks ore building defense, and then the player only
	unit is selected; in the example, the p 100% to 88%. Not trivial to implement because siege units still need to igno	now city defense including buildings when a siege player would then see defense decrease from at (can't just take away IgnoreBuildingDefense bre bombardment reduction), and my solution is siege units entirely ignore defensive buildings.
Tbd.	Would be nice to have the help text for the Bombard button state the bombard rate.	
	And, clearly, Walls and Castles could	l use a buff.
004d	Al says "not right now" to peace whe	n war is recent
AdvCiv		K-Mod
Screen say	ayer tries to broker peace, the Trade /s "not right now" if the war is still	Says "we'd love to, but you'd have to ask them" instead. Often, both sides say this.
too recent. The AI will agree to brokered peace with a third civ as part of a peace treaty with the human even if the AI would normally still refuse to talk to that third civ.		(As far as I recall, peace could be brokered even when a war was recent in BtS.)
004e	Leads-to info added to promotion but	itons
AdvCiv		BtS
	ext for promotion buttons lists the senabled by the current promotion.	Can only look this up in Civilopedia.

E.g. "Flankir	ng I	
Leads to Fla	anking II, Navigation, Sentry"	
004f	Disabled celebrations	
No celebrations (We-Love-The-King Day) ever.		If a city has at least 8 population, no anger and no bad health, celebrations happen with a probability of population / 1000. The reward is 0 maintenance for 1 turn.
Rationale	Rationale Celebrations grant just -3% maintenance on average in a size 30 city, which is insignificant. I'm not even listing this as a balance change. Celebrations were pot Civ 2, but already irrelevant in Civ 3. They've only confused players. Something rone will miss who doesn't know it's disabled.	
004g	Misc. changes of confusing help text	(not a complete list)
"Our shared	borders spark tensions"	"Our close borders spark tensions" Too similar to "closed", and doesn't imply that they're touching.
"We don't lik	ke you enough"	"We just don't like you enough" Sounds like this is the only obstacle, but often isn't.
	attacked a y: 22% damage." e minus sign.	"Your x has attacked a y: -22% damage"
"Your x has	died attacking a y."	"Your x has died trying to attack a y."
"Some wonders on this continent are making us happy" for the Notre Dame ability. (Only changed in English and German)		"Some buildings are making us happy", listed twice when there is also e.g. a Colosseum.
Financial Advisor says commerce from "Trade" Credit to <u>Th334</u>		"Foreign trade" in K-Mod (but it's actually all trade)
"The anarch	y is over" in white letters	In red letters, like it's a bad thing.
	aid of their military might" when var refused on account of nukes	"Surely, you must be joking."
Polar desert called "Snow" instead of "Ice".		Both polar desert and shelf ice are called "Ice".
"Show City Radii" (Graphics option) + better explanation text		"Show City Radius" (but doesn't actually show the radius around a selected Settler)
004h	Highlight full city radius when Settler	selected; no yield icons
When a Set highlighted.	tler is selected, the full city radius is	Only the inner radius, i.e. the adjacent tiles are highlighted.
No yield icons are shown (unless they're always shown through "Display Yields"). To implement this, CvDLLInterfaceIFaceBase:: toggleYieldVisibleMode was no help. I had to replace CvUnit::isFound so that the EXE doesn't even know whether a Settler is selected. A hack like this could have undesirable sideeffects, but, so far, everything seems fine. Nothing is highlighted if any non-Settler unit is		Even if "Display Yields" (button above the minimap) is disabled, yield icons are shown when a Settler is selected. The highlighting is based on whether at least one
selected along with a Settler.		Settler is selected (CvDLLInterfaceIFaceBase: canSelectionListFound).

Rationale		lpful at all; it's not even a reliable projection of the some of the highlighted tiles could already be
	The yield icons are useless to me personally, but I know some players always keep them enabled, perhaps, in part, because icons on worked tiles are highlighted, making it easier to tell which tiles are being worked. I'm not sure if anyone wants to see the icons only when a Settler is selected – I normally choose my city sites before even training a Settler. So hopefully an XML switch for this is sufficient; could also add it as a BUG option to the Map tab (using ::getBugOptionBOOL in the DLL).	
Config	Two settings in GlobalDefines_adv	c.xml
Tbd.	When settling o a tile marked with a cremove that marker automatically.	dot on the Strategy layer, it would be nice to
004i	Message about gold stolen by enemy	spies says how much was stolen
Credits	Idea from Civ 4 Reimagined <u>1.2</u>	
See also	120d: The Espionage shows the amo	ount of gold to be stolen in advance.
004j	Changes to "Regenerate Map"	
regenerate	ayer games, the map can be can until (incl.) turn 3. Exception: Can't civs meet each other already on turn 0).	
Rationale	More convenient for testing, but, on second thought, regeneration past turn 0 might no be entirely clean. Regeneration does not reset the game, player and team objects; just destroys all units and cities. Also, it's not such an inconvenience to reload the initial autosave.	
Tbd.	Perhaps a full reset wouldn't be so ha	ard to implement.
	At least I should try to get rid of the have-met exception on turn 0. Resetting the has-met flags is simple. Years-of-peace and perhaps other AI memory starts to count when another civ is met, but that's not a problem on turn 0, and resetting memory counts is also easy enough. A human civ could immediately declare war, so I at-war flags would have to be reset. When starting in a later era though, various trades could be made on turn 0	
(DoM) scre	Tregenerating the map, the Dawn of Man M) screen is shown again, and the camera ers on the player's active unit. The DoM screen isn't shown after regenerating and the game tries to center the camera on the player's starting plot, but somehow this has no effect; camera stays at the previous starting plot.	
Rationale	I don't really have an opinion on whether the DoM screen should appear after regenerating, but, somehow, DoM allows the camera to move (though the line that wants to center it on the starting plot still seems to have no effect).	
See also	704: Other changes to the Dawn of M	lan screen.
004k	Removed Sea Patrol mission	
Rationale	No one seems to use it; leaner interfa	ace is better.
Tbd.	Would prefer to leave the mission available via its keyboard shortcut. That's not so easy to implement. (Shortcuts are handled in handleAction, which checks, ultimately, canDoMission, which is also responsible for the displayed mission buttons.)	
004I	Fortify-Heal works like Sentry-Heal outside cities	
	it is fortified "until healed" outside a nit will ask for orders when a hostile	Units that are fortified until healed only ask for

• •	orders once they're healed. units healing in Forts don't wake up ealed.	
Rationale	BULL has a separate Sentry-Heal mission that is missing from K-Mod. My change to Fortify-Heal should result in the desired behavior in most cases. Units already have so many rarely used buttons; don't want to add another.	
Tbd.	The help text should say "Sentry until Healed" when not in a city. I've written the help text (Civ4GameText_advc.xml), but showing it dynamically based on whether a unit is in a city isn't straightforward. Will have to implement a separate Sentry-Heal mission, and disable Fortify-Heal outside of cities (and disable Sentry-Heal inside cities). And make sure that it works in networked multiplayer; the current implementation should be fine, but new action buttons can introduce OOS bugs.	
004m	Increased initial camera distance, decreased field of view and enabled resource bubbles by default.	
Rationale	I always zoom out a bit at game start, and I recall reading somewhere that customer research (on Civ 4?) had shown that most players play from rather far away.	
	Field of view: The lower the value, the smaller the field of view, i.e. fewer tiles are shown on the main interface and the city screen. If fewer tiles are shown, one has to zoom out farther to get an overview. This, in turn, means that the camera angle becomes more top-down, which is what I want. At the current value (35), I'm seeing just the city radius on the city screen, which is fine, but this depends on the screen resolution; mine is 1280x1024. There's code in CvMainInterface.py that adjusts the field-of-view value set in XML to the screen resolution, but I'm not sure how well that works; players may have to adjust the field of view manually; see below. The initial camera distance may then also have to be adjusted.	
	Due to the smaller field of view, I had to make changes in <code>Civ4DetailManager.xml</code> to keep the camera distance at which textures become blurred the same as in BtS.	
Config	Set in GlobalDefines_advc. Field of view can also be changed from within the game by enabling the field-of-view slider from the Map tab of the BUG menu. If "Remember Field of View" is checked, the value on the slider is stored in My Games\Beyond the Sword\AdvCiv\Settings\BUG Main Interface.ini, and the value set in GlobalDefines_advc is ignored. "Field of View" can then be unchecked again in order to hide the slider.	
Tbd.	Would be better to (re-)store the status of resource bubbles through one of BUG's ini files. The SDK doesn't even say whether the layer is enabled, but I've worked around this (function CvGame::isResourceLayer) for change 003d.	
See als	002h disables the passing clouds.	
004n	Arrow button on city screen shows all local units	
One normal click on the right-arrow button on the city screen shows icons for all local units. One full row of unit icons is shown when opening the city screen. If there are more units in the city tile than fit in one row, each click on the right arrow next to the unit icons shows one additional unit. If Ctrl is held when clicking, 10 more units are shown.		
Rationale	At least at 1280x1024 resolution – and I think most players have that much –, even 100 units don't really obstruct the city screen. Showing them one by one is needlessly slow and complicated.	
0040	No start-revolution button on the new-civic popup	

"No, the old picture". Ex that the play button is sh	e-civic popup only has the buttons I ways are best" and "Let's see the big ception: When there is only one civic yer can change to, the start-revolution own in addition. This usually happens ayer discovers Bronze Working.	
Rationale		changes that could be made along with the one more than one civic becomes available at a easily.
004p	No commerce breakdown in city scre	en if slider at 0
commerce t	ving help text for any of the four types on the city screen, a breakdown merce is shown only when the slider above 0.	Raw commerce is shown even when the slider is 0. E.g. "Culture: 1000 ==== Base commerce: 50 +50% for Capital 0% of 75 = 0"

004s	Economy ("GNP") curve doesn't cour moving average	nt culture and espionage; yield curves show
AdvCiv		K-Mod

The Economy graph on the Info screen is named Called "GNP (Gold)" and shows the sum of all 'GNP (Gold+Research)" and shows the net sum commerce produced by cities, including culture of the gold generated by all cities plus the sum of and espionage. (So far, as in BtS.) Gold is the research generated by all cities. This sum doesn't include any costs (e.g. city maintenance or civic upkeep). It does include (no change) all gold and research modifiers (e.g. Bank, Library) and commerce from trade routes, buildings (Shrine) and specialists.

reduced by the sum of all gold costs, including inflation. Research is increased based on modifiers that apply to the currently researched tech: from tech diffusion and from knowing multiple prerequisite techs.

All the yield curves show moving averages based All curves show the game state at a given turn. on three samples. not an average.

Economy and Industry ("goods produced") curves show a (very short) straight line for revolution turns.

When a revolution turn is sampled for one of the curves, a sharp, brief decline is shown.

Rationale

Culture and Espionage have their own curves. Both can reach far higher rates than research and gold normally do; e.g. a settled Great Spy produces 12 espionage per turn, a settled Great Scientist only 6 research. This makes it hard to tell from the Economy curve if a civ has a strong economy or if it's merely focusing on culture or espionage. A single curve for gold and research is OK; they're on the same scale.

By including costs, the curve would essentially become a research curve, which is probably more useful than some commerce curve, but then it would seem like a "Gold" curve is missing. Excluding costs is also consistent with the Agriculture curve ("crop yield"), which doesn't include food consumption.

As for research modifiers: Any modifiers that apply only to the currently researched tech (which can change any turn) are misleading. (That said, perhaps tech diffusion should be included; if they're behind on the current tech, they may well be behind on the next one ...)

Moving average: The Economy and Industry curve fluctuate a lot in BtS, to the point of being hard to read, and removing culture and espionage (which rarely fluctuate) from the Economy curve makes it worse. The fluctuation is caused by AI juggling of citizens. Apart from usability, the average is also supposed to obscure the changes from one turn to the next a bit. I can't make much sense of them, but it might be possible to derive some specific information, e.g. about AI war planning or wonder building, that the player isn't supposed to have. The power curve has that issue too; however, it might be confusing if the enemy power curve doesn't immediately drop after defeating an enemy stack.

Revolution turns: The negative spikes are confusing because revolution turns aren't always sampled when drawing the curves.

Tbd.

'GNP" is a bad name because "Goods produced" would have to be included in a GNP. Showing yield icons instead of the words "production", "culture" etc. would be nice, but it seems that the Python drop-down menus don't support icons in their labels.

See also

038 uses the GNP curve to determine which civs are "wealthy".

132 uses the GNP curve to predict the cost of anarchy.

<u>UWAI</u> uses the GNP curve for converting war utility into trade value and vice versa, and the production curve for estimating military build-up.

004t	Cick-to-exit-city-screen disabled	
AdvCiv		BtS
The city screen can't be (accidentally or		The city screen can always be exited through

workable tile screen work The flashing	e. All other methods for exiting the city	middle-click, left-click on the mini-map, Esc, Enter, Space, by selecting a garrisoned unit or by accessing an Advisor screen through a function key. Left-click on a non-workable tile also exits the screen; since the BtS expansion, there is an XML switch to disable this.
Rationale	Happens too easily by accident. Especially annoying when the city has just been given production orders because, then, the next popup will appear before the player gets a chance to re-enter the proper city screen.	
	Apparently, the original developers wanted the game to be playable without a keyboard and with just one or two mouse buttons, and I agree with that – fortunately, one can still exit the city screen by clicking on the mini-map. Not very intuitive, but neither is clicking on an unworkable tile.

attack does Warlord by I Cavalry has	The regular message about a unit killed in an attack doesn't mentioned an attached Great Warlord by name, i.e. might just say "Your Cavalry has died attacking a Rifleman." Only the GG death message mentions the name of the Warlord.		
Rationale	The BtS messages are more overtly redundant and not grammatically correct. The grammar is still incorrect in messages about a Warlord surviving combat. These messages are quite frequent, so I've tried putting the "Your %s1_UnitName" phrase into a separate key, but this would've caused problems with gender agreement in the Romance languages.		

004v	Changes to scoreboard text	
AdvCiv	1	BtS
The hint about Ctrl for trade table and Alt for DoW are merged into a single line. Two lines of UI help, one above the line about worst enemy, the other below.

004x	Kill redundant minimized popups; oth	er changes to civics/religion poups
AdvCiv		BtS
When a choose-tech popup is launched or the player chooses a tech, all pending choose-tech popups are killed. When a change-civics popup is launched or civics are changed, all pending change-civics popups are killed. When a change-religion popup is launched or the		When research finishes on a tech and no tech is queued for research, a choose-tech popup is launched and appears minimzed at the start of the next turn (if playing with the "minimize popups" option; otherwise there isn't a problem). For each additional tech that the player receives through e.g. tech trade before choosing his/her next tech, another minimized popup is launched.
religion pop	verts to a religion, all pending change- oups are killed. chy breaks out, all choose-production	All but the latest popup will show outdated research options (not taking into account all the additional techs discovered). Once the next tech
popups are restored.	killed. They reappear when order is	is chosen, any remaining popups disappear once maximized.
restored.		Similarly, multiple change-civics and change- religion popups can appear and don't disappear when the player changes civis/ religion through an advisor screen.
		I don't think multiple choose-production popups for the same city can appear, but the single popup fails to disappear when the player chooses production through the city screen.
Rationale	I'd actually prefer to allow multiple change-civics and change-religion popups, but it's difficult to do this consistently as there appears to be a mechanism in the EXE for preventing multiple change-civics popups, it just doesn't always work. E.g. after discovering Feudalism, BtS shows only one popup for Serfom and none for Vassalage (intended behavior I think, but I'd like it better to also have a popup for Vassalage), but when trading for, say, Code of Laws while the change-to-Serfdom popup is waiting, another change-civics popup will appear for Caste System (OK, but inconsistent with the missing Vassalage popup).	
completed, unless the	Pyramids or Shwedagon Paya is a change-civics popup is shown player already had access to all nt/ Religion civics.	Buildings that unlock an entire column of civics don't trigger a change-civics popup.
When a new civic becomes available (through a technology or a wonder) at a time when no revolution is possible, then the popup is delayed until the player can change civics again.		
Rationale	I've forgotten about switching civics a	Ifter completing the Pyramids one time too many.

004z	Changes to layers	
AdvCiv		BtS
The Resource layer always shows all resources;		
no option in Globe view for filtering the shown		default, and a selection box opens for showing
resources.		only happiness, only health or only strategic

		resources.
	ver shows all units by default of Globe view.	The unit layer shows "Enemies in Territory" by default. In Globe view "All Units" is the default, and several other options can be selected. It appears that the "Enemies in Territory" option was added by the BtS expansion.
Config	_	obalDefines_advc.xml. The default option for nrough the DLL (a hack was required).
Rationale	The Resource options seem almost useless to me. Could make it easier to check which rivals have access to a particular resource, but I've never once used it for that. I'm less sure about the Unit options. Even when one is only interested in e.g. enemy units, showing allied units (in a different color) along with enemies doesn't seem like much of a distraction; after all, they can't occupy the same tiles. That said, showing only "Domestic" units is useful for locating Spies and Workers, though I think few players ever use this. In any case, "Enemies in Territory" isn't a good default option in Standard view; normally there are none. Makes it seem like the Unit layer is broken (help text doesn't say which units are shown).	
Tbd.	It would be nice if the Unit layer could and not just in Globe view.	d somehow communicate stack sizes more clearly
	er without options is selected, the is shown in Globe view.	The scoreboard is never shown in Globe view.
Config	SHOW_SCORE_IN_GLOBE_VIEW in Glob	balDefines_advc.xml
Rationale	·	scoreboard in Globe view, e.g. for following <u>all-Al</u> there are no options to display, the space might
Tbd.	one has to go back to Standard view	toggles the scoreboard in Globe view. Currently, in order to disable the scoreboard. Above the plenty of layer buttons. Doesn't seem trivial to
The Resource layer also highlights goody huts when the "All Resources" option is selected unless the unit action recommendations option (UAR) is enabled. UAR cause huts to be highlighted when any nearby combat unit is selected. Highlights only resources. Tribal Villages aren't highlighted by any layer. If UAR is enabled, Tribal Villages are highlighted with a blue circle when a nearby Recon unit is selected.		
See also	315 increases the size of the goody hut 3D model, but they're still a bit hard to see on Forest tiles. Don't want a UAR circle <i>and</i> an indicator bubble, but the indicator alone isn't good enough when it only works on Recon units. Therefore I've removed the Recon restriction.	
Rationale	Normal map scripts don't place a hut and a resource in the same tile, so the Resource layer seems like a good place for highlighting huts.	
Config	SHOW_GOODY_HUTS_ON_RESOURCE_LAYER in GlobalDefines_advc.xml.	
Tbd.	Even when UAR are disabled, huts can be highlighted with a blue circle at the very beginning of a game. One way to prevent this could be to make the Settler the selected unit at game start (not the Warrior/ Scout).	
When in Globe view, layer icons ("indicators", 'bubbles") are shown at a smaller diameter than in Standard (non-Globe) view. Resource icons are the same size in Globe view as in Standard view. It might be that their size relative to the size of a tile increases with the		

		screen resolution; one CFC user describes the
		icons as "ridiculously big at 1920x1200". (link)
Rationale	Unfortunately, there appears to be <u>no way</u> to shrink the indicators in Standard view. Shrinking them in Globe view is better than nothing.	
according to	ayer colors all revealed tiles the trade network grouping except small groups like water tiles enclosed	The Trade layer colors only tiles owned by the (human) player's team.
Cities that are actively visible to the player (i.e. not fogged) and not connected to their owner's capital are marked in black.		No special marker for disconnected cities.
Rationale	rules. Showing trade along unowned It would be nice if the layer could also coloring is entirely based on the player is that it can give away information at I'm only providing info about currently	etting a better understanding of the trade group coasts (with Sailing) should be an improvement. It is show the trade networks of rivals – in BtS, the er's civ. The problem with showing rival networks bout unrevealed coastlines and routes. Therefore, it visible cities. The black mark should be helpful een cut off from the capital, e.g. through a naval

AdvCiv

MaxWarMinAdjacentLandPercent=2 for Bismarck. While he eventually gave up his reluctance to off-shore colonies, he was never keen on distant parts of Europe (let alone Asia): "The Balkans are not worth the healthy bones of a single Pomeranian grenadier." The Realism Invictus mod even sets it to 4.

Also lowered his attitude threshold for defensive pacts to Cautious (realpolitik, Triple Alliance), and increased his weight for diplomatic victory and lowered the one for domination victory. Conversely, gave Brennus higher weight think they actually have a big impact on the game. for domination and lowered weight for diplo.

While I was at it (further minor changes): Shifted Catherine's weights from conquest toward domination and science. Added a bit of science weight to Ramesses, and reduced his conquest weight. Increased Saladin's weight for diplomacy a bit at the expense of conquest and space.

MaxWarDistantPowerRatio=70 for Napoleon. Napoleonic France fought few off-shore wars and even ceded Louisiana to the US.

MaxWarMinAdjacentLandPercent=2 for Charlemagne and Cyrus. Charlemagne extended his borders gradually in all directions; Cyrus conquered several empires that weren't exactly at his doorstep.

MaxWarRand=150 for Willem, i.e. now a bit less willing to start Was 100. "total" wars. In part, because wars of conquest seem out of character for the small Netherlands; in part, because he's doing a bit too well in AdvCiv games in my experience (and more so than other Financial leaders).

and made him a little less interested in dogpile wars. And increased NoWarAttitude when Pleased to 90.

Increased Roosevelt's NoWarAttitudeProb at Pleased to 100 and at Cautious to 70, but increased his Build-UnitProb to 25. Decreased NoWarAttitudeProb for Brennus at Cautious to 50 and for Darius at Pleased to 90.

Suryvarman's favorite religion is Hinduism and his primary flavor is Religion. He was a Hindu and built large temples. Tbd.: His favorite civic should be Caste System.

Overhauled Unit AI weight modifiers and reduced their impact to at most +50% per Unit AI type. And two small accompanying changes to CvPlayerAI::AI unitValue.

Also overhauled AI improvement weight modifiers and increased their impact to up to 30% per improvement type.

See also: 131 makes minor changes to AI bestUnit, and AI getImprovementValue (both in CvCityAI.cpp), the functions that apply the weight modifiers.

BtS

Was 0. It's a preference for long-distance land wars, ranging between 0 and 4. 0 means Bismarck treats neighboring civs no different from other civs on the same continent when it comes to war planning.

Threshold is at Pleased, like most other leaders.

Victory condition weights have been added by BBAI. I don't

Was 100. A preference for naval war, Napoleon is tied for the highest value, while his MaxWarNearbyPowerRatio (land wars) is only moderate.

Was 1 and 3 respectively.

Also shifted his victory weight a bit from Conquest to Culture Was 80, tied for the lowest value with Alexander, Louis, Mao, Montezuma, Qin, Victoria. 90 is the same as the other 19 leaders who attack when Pleased

> Was 90 at Pleased, 50 at Cautious, 20 BuildUnitProb. Was 70 (Brennus, Cautious) and 100 (Darius, Pleased).

Buddhism. Some later Khmer kings were Buddhists. Primary Gold, secondary Culture. Gandhi the only Hindu.

Each leader (except Hatshepsut) has 100% weight bonus for one particular Unit AI type, namely Worker (Pacal, Frederick, Gandhi), Explorer (Mansa Musa), Attack (Alexander, Brennus, Cyrus, Hannibal, Justinian, Montezuma, Peter), Attack City (Augustus, Chalemagne, Kublai Khan, Louis, Suleiman), Counter (Catherine, Julius, Napoleon, Roosevelt, Saladin, Wang Kon, Willem), City Counter (Darius, Huayna Capac, Lincoln, Tokugawa), City Defense (Churchill, Gilgamesh, Hammurabi, Sitting Bull, Zara Yaqob), *Reserve* (Asoka, Ramesses, Suryavarman, Washington), *Pillage* (Boudica, Genghis Khan, Mao, Shaka), Collateral (Bismarck, Mehmed, Qin), Attack Sea (Isabella, Pericles, Peter), Reserve Sea (Victoria), Assault Sea (Ragnar), Explore Sea (Elizabeth, Joao), ICBM (De Gaulle).

31 leaders have 10% weight bonuses for one or two improvements, namely Farm (Bismarck, De Gaulle, Shaka), Farm & Windmill (Brennus, Boudica, Churchill, Elizabeth, Willem, Napoleon, Peter, Pericles, Cyrus, Hamurabi, Mehmed, Suleiman, Isabella, Joao, Pacal, Washington), Cottage.. Town (Darius, Frederick, Huayna Capac, Ragnar, Victoria, Wang Kon), Cottage.. Town & Windmill (Gandhi, Hannibal, Lincoln, Mansa Musa), Workshop & Watermill

(Mao. Stalin). Roosevelt change: 90/50 NoWarAttitudeProb is the same as the Mongol leaders or Rationale Napoleon. Some peaceful leaders like Mansa Musa and Elizabeth also have it, but along with a low BuildUnitProb. This makes for leaders that are ruthless but powerless. This doesn't fit for Roosevelt at all. He's the leader most representative of the presentday America that doesn't invade partners, but has a big military. Changed Brennus and Darius to keep the overall balance. I don't know if that balance is exactly right, but if anything there are too many leaders that don't normally attack at Pleased. Unit AI weights: Doubling the weight seems extreme, and, for most leaders, a preference for a particular Unit AI type doesn't even make much sense. See Civ4LeaderHeadInfos.xml for the new weights and some handwave rationales. I've tried to avoid reinforcing the AI type(s) of the unique units because the AI already trains these more frequently than the unit stats would justify. About Worker weights, note that Workers are rarely trained through AI bestUnit, so these have very little impact. This may also apply to other unusual bonuses (e.g. Spy). Improvement weights: I can't make much sense of the BtS weights. Looks like the Al didn't build enough Windmills and the developers decided to amend this through weights for all civs that have ever built windmills. This reason should be obsolete because of K-Mod changes in the DLL, and 10% is very little (it said 20% in XML, but the DLL halved that). I've given most leaders two 20% bonuses (no longer halved), and some a single bonus of 30%. The impact of these bonuses still seems very small, perhaps too small. The choice of the improvement is now vaguely based on the leaders' historical policies. I didn't take into account whether an improvement supports a leader's traits, favorite civics or playstyle; the DLL can handle that, and I don't want to make the playstyles (even) more predetermined. Thd. Considering (low-key) changes to make certain leaders more distinct, improve historicity and to increase the number of warlike leaders. Under consideration for becoming more dangerous: Augustus, Brennus, Cyrus, Darius, Churchill, Frederick, Hammurabi, Justinian, Ramesses. Willem is still too aggressive. May need a thorough overhaul to become a small civ interested in culture and only slightly feisty. Increased cap for the relations penalty from 2 for Mao, Stalin and Darius, 4 for Oin, 3 for shared borders to 3 for Mao, Stalin and Darius, Roosevelt. The cap is between 1 (only Willem and decreased the cap to 3 for Qin and to 2 for has this value) and 4 (most of the typical Roosevelt. warmongers). Modern China has plenty of border problems with pretty much all its neighbors. In Rationale Mao's time, border tensions with the Soviet Union escalated. Stalin was impossible to get along with for his western neighbors. I'd set both caps to 4, but that change would be a bit drastic. Both Persian kings invaded most of their neighbors, but let's keep Cyrus somewhat peaceable for now. To counter the increased caps. I've reduced Roosevelt (I don't see why he should be sensitive about border tiles) and Qin. The Qin dynasty secured its northern border with the Wall, but that doesn't quite justify a cap of 4. And it's strange to give Qin a higher cap than Mao. 005b GP names assigned chronologically AdvCiv BtS GP names are assigned in the order they're listed When a GP is born, the name is chosen in Civ4UnitInfo.xml, i.e. roughly ordered by uniformly at random from among the GP with date of birth; no more Ancient Heisenberg, About matching type. 005с	City ruins bear the name of the forme	er city
in a tile with meaning th an improve	n city ruins. Can't pillage city ruins, bey can only be removed by building ement on top.	The name of the former city isn't recorded anywhere. Can pillage city ruins (0 gold).
Rationale	For flavor. No pillaging because the name of a destroyed city could have strategic importance (albeit very little), and I wouldn't want players to destroy ruins in order to monopolize information (in multiplayer). Also, while Sennacherib boasted to have "removed the dust of Babylon for presents to be sent to the most distant peoples," the idea of pillaging ruins doesn't immediately make sense.	
005d	Spurious/ misattributed tech quotes corrected or marked as "ascribed to" (only English and German)	
Credits	CFC discussion about Civ6 tech quot CFC user Steb pointed out a few mo	tes: <u>link;</u> offshoot about BtS: <u>link</u> re in the Dawn of Civilization subforum: <u>link</u>
005e	German text: Changed the name of Galley from "Triere" to "Galeere" and the name Trireme from "Trireme" to "Triere" because "Triere" and "Trireme" are synonyms.	
		nglish: A trireme is a special kind of galley. The le Galley unit is supposed to be a pentekonter. salley that rather obscure name.
005f	City art style based on highest culture	9
,	le of a city's 3D models is that of the highest tile culture in the city.	The city owner's art style is used.
Rationale		nmediately change upon conquest. (It kind of did much of the former population and its culture was ces of the past on the map.
	change for Cottages, Hamlets etc. Lo	izing that there is no way to make the same ooks like the code in the EXE checks the owner of etArtStyleType on the owner and uses the
Config	XML switch in GlobalDefines_advc	
Credits	Idea from Xyth's History Rewritten v1	<u>25</u>

005e	City name tweaks		
Tbd.	All the city lists could use an overhaul: Higher priority for ancient capitals; avoid high priority for cities that were very close to each other; include more remote cities, maybe even some in client states that don't appear in the game. Mods like Realism Invictus and DoC could be of help.		
Angkor W	Angkor Wat removed from the Khmer city list. It's in position 4. Yasodharapura is in position 1.		
Rationale	The temple was in Yasodharapura, also known as Angkor ("capital"), but not as Angkor Wat ("capital temple"). The temple district could be seen as its own city, but isn't commonly seen that way, and having a wonder and a city of the same name is awkward.		

Chichen Itza: Should rename the wonder in this case (Temple of Kukulcan).

006	Disabled some assertions
סטט	Disabled some assemblis

Tbd.

Disabled assertions that are supposed to be rare and were still under investigation by earlier modders. In some cases, I've tried to resolve these myself, in others I've disabled them because they were interfering with my testing of more immediate issues.

Changes to info shown in Debug mode; logging

- No confirmation needed for entering WorldBuilder if already in Debug mode.
- Red circles from BBAI only shown if Show-Yields view was enabled before entering Debug mode. (Can also toggle the circles by toggling Show-Yields and entering and leaving a city screen.)
- Military Advisor shows all foreign units.
- Privateer owner revealed.
- Alt+Ctrl on an owned tile shows the Al resource trade counter (which is divided by 50 to yield the "appreciate the years" relations bonus).
- Can no longer show Info, Victory, Espionage and Foreign Advisor screen for Barbarians. These screens aren't helpful and some had been leading to failed assertions.
- When Alt is held down on a tile, the tile's found values are recomputed ignoring overlap with planned city sites. This value is shown first, then the cached value (planned sites taken into account). (BtS shows the cached value first, then a recomputed value that normally equals the cached value and then then a value computed as if the map was empty, marked with an "s" for "starting location". AdvCiv does not compute this "s"-value.)
- Need to hold down Shift in order to see stack compare values along with combat odds.

See also 001d fixes some Debug mode bugs in various Advisor screens.

XML switch PER_PLAYER_MESSAGE_CONTROL_LOG for creating multiple MPLog.txt when testing multiplayer games on a single PC. These will have to be deleted manually.

Procedure: Set LoggingEnabled = 1 and RandLog = 1 in CivilizationIV.ini. Will probably also have to set MessageLog = 1 and SynchLog = 1. Or rather, put these in a copy of CivilizationIV.ini (Say, MPDebug.ini), Set Mod = Mods\AdvCiv and FullScreen = 0 in the copy and place it in the same folder as Civ4BeyondSword.exe; then create a shortcut targeting "C:\Program Files (x86)\Sid Meier's Civilization 4\Beyond the Sword\Civ4BeyondSword.exe" ini=advcMP.ini multiple, where multiple is for allowing multiple

instances of the BtS process. Launch the game twice through that shortcut, create a Direct IP game named <code>chipotle</code> (see 135c) with one process and join it with the other by connecting to			
127.0.0.1.	127.0.0.1.		
Rationale	Need an MPLog.txt from each player in order to debug OOS errors.		
See also	001n fixes OOS errors		
	135c allows deug tools in multiplayer and refactors CvGameTextMgr::setPlotHelp.		

007b	Cheat and debug shortcuts disabled	unless in Debug mode
AdvCiv		K-Mod
(menu for gr		Numerous shortcuts (<u>list</u> on GameSpot.com) that require only "chipotle" to be entered in CivilizationIV.ini; Debug mode isn't checked. Some of these are easy to trigger by accident, in particular Ctrl+Shift-+Left Click (Object Placer menu) and Plus key while hovering over a city (immediately finishes the city's production).
	If players actually want to use these shortcuts for cheating a little, then it could be annoying that Debug mode is required because Debug mode reveals the map, which can be a spoiler (and so does WorldBuilder). Still, for development purposes, I need to have Debug mode at hand, so I need the cheat mode ("chipotle"), but I don't want to run into other cheat commands, perhaps without even noticing.	
	Chapter on <u>all-Al games</u> : The spectator mode requires Debug mode, which in turn requires cheats to be enabled, so regular players may end up leaving cheats enabled permanently. Don't want these players to stumble onto cheat commands.	
Tbd.	Could add an override in GlobalDefin mode.	es to allow cheat commands without Debug

800	Changes to Civilopedia content and hintsObject Placer (Ctrl+Shift+Left-Click) disabled unless in Debug mode. (BtS probably requires "chipotle" and singleplayer, though I haven't checked. Other developer shortcuts, e.g. Ctrl+Shift+W for wonder movies, do seem to require	
	some content that is no longer accurate. For some Game Concept pages, I left the ne, and merely added a warning at the top that the info could be outdated.	
I've only cha	anged the English and German version.	
Config	The modified bits are in a separate file called CIV4GameText_advc.008.xml.	
Tbd.	Not all the strategy advice is up to date. Especially the tech and building advice is a lot of work to maintain, and much of it is redundant. The tech advice is only shown when Sid's Tips are enabled. Would be best to somehow disable these texts completely for anything past the Ancient era; the early-game texts actually do contain some advice.	
See also	004y: Changes to Civilopedia formatting 033 shows the Privateer's plunder ability in Civilopedia 179 shows the production bonus of the Apostolic Palace in Civilopedia	
008a	Hide abilities in Civilopedia when they don't apply	
Rationale	To unclutter the Civilopedia	
See also	004w unclutters the help texts for buildings on the city screen.	

AdvCiv		BtS	
Showing the "Can be built on X era and earlier starts" restriction only when X is smaller than the current game's start era, i.e. when the restriction applies to the current game. When the Civilopedia is accessed from the main menu, the restriction is shown when X is not equal to the wonder's tech era plus 1.		and regardless of the current game's start era.	
Shwedagon Paya not available on Renaissance start and Statue of Zeus available on Classical start.		Both wonders were added in BtS. Shwed is available on Renaissance start and earlier and Zeus only on Ancient start.	
Versailles n	ot available on Industrial start.	Industrial start or earlier.	
Rationale		when starting two eras after their tech era; spell out ost Ancient wonders are available when starting in 1't).	
	The changes to individual wonders re Civilopedia needs to mention.	educe the number of exceptions that the	
See also	310 changes the start era restriction	of the Great Wall	
Tbd.	civilopedia should list the free buildings from later-era start along with the desc of the later-era start settings.		
	Perhaps prevent civs from constructing a wonder once they reach the threshold era – regardless of the game's start era. This could make wonders scarcer in games with few civs.		
		victory must be enabled") only when accessing ory condition is disabled in the current game.	
008b	(unassigned)		
008c	Updated some of the hints that are shown while loading savegames (only English and German)		
008d	New hints about AdvCiv changes and a few K-Mod changes that weren't previously covered. Gave all hints about modded content a higher probability of being shown than the hints from Vanilla and BtS (Warlords didn't add any). Tried to mimic the tone of the original hints. Only in English and German.		
Config	Increased the probability by duplicating entries in CIV4Hints.xml. Separate file for the new hints: CIV4GameText_advc.008d.xml.		
008e	Changes to the names of wonders a	nd projects	
	No wonder or project name starts with "The" or any other article (translations). Totally inconsistent; e.g. "Angkor Wat", but "The Taj Mahal".		
Rationale	Makes it easier to find wonders in Civilopedia and on the Wonders tab. Just "Pyramids" is a little strange, but most of the names work fine without an article. Could make it "Great Pyramids" (joining Great Lighthouse, Great Wall and Great Library), but I guess "Pyramids" is OK.		
Config	Separate file CIV4GameText_advc.008e.xml. Further changes to wonder names will have to be made there. Can delete the file to undo all name changes.		

009	Setup of configuration files: BUG settings, GlobalDefines, BUG and BBAI help files

AdvCiv		K-Mod
Included the BUG help files in three languages (no French and Spanish translation seem to exist).		No BUG help files included; clicking on "BUG Mod Help" in the BUG options menu results in an error message.
Rationale	The help files also include developer	credits; gotta have those.
See also	002b also deals with file paths	
Tbd.	Would like to rename the Mod/AdvCiv/Settings folder (doesn't actually contain important settings), but that's not so easy to do; see the txt file in that folder.	
	Would be nice to use the <u>SourceForg</u> installations as a fallback when help	ge URL that BugHelp.py tries to access for Mac files aren't found locally.
CvTextScr	eens.cpp removed from CvGameCore	DLL.
Rationale	Apparently doesn't get compiled into	the DLL, so it doesn't serve any purpose.
Credits	alberts2 (Caveman to Cosmos mod): SourceForge revision	
009b	BUG initialization (only relevant for d	evelopers)
AdvCiv		BUG
Catch and discard exceptions that occur in BUG code when scripts are reloaded in response to a change in a script file while the game is running. Python changes at runtime still often require a restart because BUG initialization code tries to access functions (e.g. in CvMainInterface.py) that somehow aren't accessible yet. (Tbd.) Typical error trace:		It seems that the BUG initialization code doesn't support scripts getting reloaded at runtime. Exceptions in the components Civ4lerts and Field-of-View slider can lead to an unresponsive UI and nonfunctional alerts until the game is restarted. So, unlike in unmodded BtS, Python changes at runtime aren't really possible in BUG based mods.
File BugConfig, line 124, in unknown_endtag File BugConfig, line 348, in endChild File BugConfig, line 351, in end File BugConfig, line 332, in process File BugConfig, line 579, in handle File BugUtil, line 642, in getFunction File BugUtil, line 631, in lookupFunction ConfigError: Module 'CvMainInterface' must define function 'onSwitchHotSeatPlayer'		
Reverting this change should fix that, but there are also issues with CvScreensInterface:		
must defin	or: Module 'CvScreensInterface' ne function or class 'init' or: Module 'CvScreensInterface' ne function or class chSplash'	
Rationale	I understand too little about the BUG	mod's design to fix this properly.

010	Worker stealing disabled	
AdvCiv		BtS
Settlers and Workers die when attacked; no captured Worker appears.		Settlers and Workers die and the attacker receives a captured Worker. The AI immediately

	disbands captured units.
Rationale	Unlike human players, the AI doesn't know how to look for exposed Workers and steal them; nor how to disband Workers that are about to be stolen; nor how to guard Workers on border tiles. If the AI could do these things, it would be largely impossible to steal Workers from the AI, and players would have to guard their Workers on border tiles, which would be very tedious. This might be why the original developers abandoned efforts to let the AI steal Workers (CvUnitAI::AI_poach is never called).
	So, Worker stealing as a game mechanism can only work against an unwitting AI. I do like the slave-raid flavor, but I don't think it's worth putting the AI at a considerable disadvantage. Early disruptive wars remain useful for destroying AI Workers (see Tbd.) and for keeping enemy tiles from being improved – I wouldn't want to make this tactic unviable.
	Flocks of Workers captured in conquered cities also contribute to Worker under- employment, which tends to slow player turns down.
	Worker stealing also undermines difficulty settings that give the AI a free Worker.
	The <u>DDiplo</u> changes (decay of AI memory) would make Worker stealing even more attractive than it is in BtS.
Config	Purely an XML change; can re-enable Worker stealing by restoring three values in Civ4UnitInfos.xml (look for advc.010).
Tbd.	Considering to have declarations of war take effect only at the end of a turn, meaning that the attacked side gets to move first. Then Worker stealing could be re-enabled. Variant: Bump Workers out of border tiles when a war is declare, and have all movement points spent when crossing a border (also of units in cargo) so that Workers become impossible to catch on the turn that a war is declared.
	Additionally or alternatively, Workers should have limited charges; this would be another way to nerf Worker stealing.
	If attacks on Workers remain possible, AI improvements would be desirable. See discussion on CFC <u>here</u> .

011	Decay of invested Worker turns	
AdvCiv		BtS
made on any for the fifth to	y of a plot's unfinished Worker builds urn in a row, the number of invested s is reduced by one for all unfinished	
Rationale	BtS allows for some very fiddly micro-optimization, especially pre-chopping, but also e.g. pre-building of Forts to protect strategic resources.	
	I don't want players to worry about leaving an improvement unfinished for some turns, e.g. until a Barbarian unit has been dealt with, but I want decay to be fast enough to make pre-chopping an irrelevant tactic. This balance is a bit difficult to get right.	
Config	Can be adjusted or disabled through GlobalDefines_advc	DELAY_UNTIL_BUILD_DECAY in
Tbd.		to have, if only for any players who disable the /orker build by holding down the Ctrl key.

012	Forest/Jungle defense reduced	
AdvCiv		BtS
	ungle provide no defense if the as the attacked tile, otherwise 25%	50% regardless of ownership.
abilities or W	ack/defense bonuses from unit /oodsman promotion still apply f tile ownership.)	
Rationale	Some players complain that removing Forests in the inner ring of a city is a no-brain because the defense bonus for invading armies is too dangerous. I'm more bothered by the implausibly high defense bonus from Forest and Jungle, which leads to game play problems too, such as Barbarians refusing to attack fortified units. Forested chokepoints are difficult to handle for the AI.	
	It makes some sense that units can defend well in forests (forests offer material for palisades etc.), and it makes sense that the civ that knows its way around in a forest (i.e. the tile owner) has an advantage; I'm assuming that these two factors cancel out when units in a Forest are attacked by the tile owner.	
Config	Tag RivalDefense added to Civ4Fe to 50 to restore BtS behavior.	eatureInfos.xml. Can set that to 0 and Defense
Tbd.	The Woodsman promotions should Jungle. Currently, only Woodsman I	provide a (net) attack bonus against Forest and II does.

014	Capitulated vassals don't pursue victory strategies	
AdvCiv		BtS
		A vassal votes for its master unless the vassal itself stands to be elected; no restriction on that.
Rationale	When even a capitulated vassal has more votes than the master civ's biggest rival, then the game is decided, and the master civ should win a diplo victory with the votes of its minions. And of course a capitulated vassal shouldn't win.	
AdvCiv		BBAI/BtS
Capitulated vassals don't pursue victory strategies, don't build team projects and don't build wonders of the world except Shrines.		Capitulated vassals pursue victory strategies and can actually win the game.
Rationale	Internet and Manhattan are things that the master may not want the vassal to build; SDI is covered by the master (change <u>143b</u>); the other projects are for space victory. Capitulated vassal shouldn't build wonders that the master might want to build or that could hurt the master (UN, AP); it's simplest to block them all.	
See also	130v about capitulated vassals voting along with their master and generally behaving like zombies. 112 about voluntary vassals breaking free when approaching victory. 143b scraps nukes upon capitulation.	

015	Changes to Great People

Tbd.	Will probably allow Priest and Artist to hurry certain wonders; move culture bomb to Spy.	
015a	Changes to tech flavor values	
See also	020	
AdvCiv		BtS
No production flavor for Constitution. I.e. can't be discovered by a Great Engineer.		3 production flavor, 4 gold, 2 culture, 2 growth. Thus a tech that Great Engineers can (and may have to) discover.
Rationale	Engineers inventing constitutions is too far a stretch.	
Tbd.	Fascism is also dubious (6 production flavor).	

016	Extra tile yields from random events	not added to city tile yields
AdvCiv		BtS
events are a	dded to the natural tile yield before lelds to at least 2 food, 1 production,	City tile yield is computed as the yield from terrain, hill, unimproved bonus and river, all assuming that features (incl. Flood Plains) are removed. The result is raised to at least 2 food, 1 production, 1 commerce. Finally, extra yields from random events and yield bonuses from Golden Age are added.
Rationale	Should be treated like all the other y	rield effects; counterintuitive in BtS.
Credit	Pointed out <u>here</u> on CFC by traius.	
Tbd.	Considering to change the city tile yield formula so that bonuses are applied after the raise step.

018	Impact of Crush AI strategy reduced	
AdvCiv		K-Mod
train more ur focus to proc	nits overall, and doesn't shift its yield luction. On the contrary, the Al	Crush makes the AI prioritize production. It also (no change in AdvCiv) lets the AI mobilize some of its defensive units as invaders, and trains more city attackers instead of defenders.
	e enemy doesn't pose much of a	At least with Aggressive AI enabled, some AI leaders adopt Crush in any "total" war that isn't going badly.
		The Crush strategy has been introduced by BBAI.
	In K-Mod, Crush seems to be used in situations where the AI might be able to win decisive victory by concentrating all its resources on the war. This leads the AI to g all-in more often than I'd like. The AI can easily end up training far more units than would be needed in these all-out wars, which sets it on a road toward a military victory. The AI goes for military victories too often in K-Mod.	
	Now the AI should use Crush only to anyway.	b bring war to a quick conclusion when it's winning
See also	115 and 104c also make the Al less	willing to go for a military victory.

019	Lower impact of Aggressive AI mode (AAI) in BBAI/K-Mod code	
AdvCiv	K-Mod	

Only minor and K-Mod	impact of AAI in some of the BBAI code.	Especially K-Mod behavior depends on AAI in many places.
Rationale	For experienced players, I think there is a happy medium between aggressive and non-aggressive AI, and really no need for two modes. Even for inexperienced players, it would be better to tie AI aggressiveness to the difficulty setting instead of a separate game option. (To be fair, BtS does that too: iAIDeclareWarProb is based on difficulty.)	
	In the original Civ 4 code, the non-AAI behavior is very passive, especially on the low and medium difficulty settings; this has been a recurrent player complaint since the Civ 4 release. Therefore, I haven't reduced the impact of Aggressive AI in the original code.	
See also	AAI can only be disabled through XML; see chapter on <u>UWAI</u> . <u>120b</u> : No impact of AAI on malicious espionage.	

020	Changes to AI flavor values	
See also	015a deals with tech flavor changes that determine which techs can be discovered by Great People.	
AdvCiv		BtS/Warlords
maintenance city defense with governing maintenance flavor of coradded to mo (Hollywood, flavor reduct and Cathedrome misc. some happing Broadcast T Religion flavor missing?). Plus some rebuildings. Espionage f Pentagon and Cathedrome misc.	e. Gold flavor no longer associated ment center (reduced distance e) and reduced on Courthouse. Gold porate HQ reduced. Culture flavor odern entertainment wonders. Rock'n'Roll, Broadway) and Growth ed. Culture flavor also on Temples rals (in addition to Religion), and on wonders. Growth flavor added to ness buildings (Colosseum, Market, lower) and National Epic. Added for to Apostolic Palace (how was that minor changes. I went through all llavor removed from West Point, and Forbidden Palace. Instead, Al onsider flavor when evaluating	Since Warlords, each AI leader has one or two flavor values, and prioritizes buildings (and technologies) that match those values. Military flavor is on buildings that increase city defense, grant free XP, increase unit production or reduce war weariness. Gold flavor for extra trade routes, increased gold rate or reduced maintenance. Culture for some of the buildings that generate culture (Monument, Stonehenge, Theater, National Epic, Hermitage, Sistine Chapel, Eiffel Tower). Growth on buildings that improve health or spur population growth, and on a few that increase happiness (Notre Dame, Globe Theater). Espionage flavor for buildings that produce espionage points or Great Spy points. Religion for religious buildings. Production for buildings with (generic) production bonuses.
Rationale	Military leaders don't usually want to get on the defensive and, therefore, shouldn't build Walls and Castles. I'm not removing the military flavor entirely because warlike leaders are also prone to counterattacks, and, (pre-)historically, militaristic cultures tended to build fortifications. Note that Protective leaders are still more inclined to build defensive buildings because of the production discount from the Protective trait; many of the Protective leaders have Military flavor. Reduced maintenance leads to a high science rate, which conflicts with buildings like Market that increase gold output. Gold flavor does give some incentives for growing wide (trade route bonuses), but I still think it's more important not to have the same flavor on Courthouse and Market. The next best choice seems Military; militaristic	

	leadara tand ta canquer wide ampira		
	leaders tend to conquer wide empires.		
	Corporations aren't there for generating gold. The HQs pair well with +gold buildings, but Gold-flavored leaders try to build Markets everywhere, not just in the HQ cities.		
	The missing Culture flavor on Hollywood etc. seems like an oversight. While Cathedrals are more of a religious thing, they're so instrumental to Culture victory that they should also have Culture flavor.		
	If Growth is supposed to support tall cities, it needs an even mix of health and happiness.		
Tbd.	The Trade Mission ability of the Great Merchant also clashes with the plus-gold-rate buildings.		
and about 100 is each tech. The ut		Additively; i.e. a flavor-based value between 0 and about 100 is added to the utility value of each tech. The utility value tends to increase with the economic output of a civ.	
evaluation, so that flavor typically makes about a m 20-30% difference. 1 ty th		Additive in BtS, K-Mod replaced it with a multiplicative formula. Flavor can make up to a 100% difference, though 40-50% seems more typical. Since the building evaluation also affects the tech evaluation in K-Mod (not in BtS), building flavor indirectly affects tech evaluation too.	
Rationale	The BtS formula means that the impact of flavor decreases with the economic output, so that a civ starts making more rational choices when it's doing well, and that flavor matters more when all eligible techs have a low utility value. None of this makes sense to me.		
Tbd.	The flavor values in <code>Civ4TechInfos.xml</code> look loopy; need an overhaul. Doesn't take into account that the utility value counted for unlocked buildings includes the flavor values assigned in <code>Civ4BuildingInfos.xml</code> . Should perhaps treat units and civics in a similar way, i.e. assign flavor values through <code>Civ4UnitInfos.xml</code> (most would simply get sth. like 5 Military flavor) and <code>Civ4CivicInfos.xml</code> (no flavor tag yet) and count them only indirectly in the tech evaluation. This way, the flavor value would be reduced along with the unit value when a tech doesn't immediately unlock a unit, and the flavor values would not have to be changed when making changes to tech requirements.		
	Should ignore first-to-discover abilities when assigning flavor values: already addressed through custom code.		
	Revised flavor values will change GP "bulb" paths though; bad for players who have them memorized.		

021	Adjusted map scripts with simulated tectonics; see also chapter <u>PerfectMongoose</u> .	
See also	Since these map scripts frequently produce mountain chains and large areas of uniform terrain, the improved AI handling of areas separated by Peaks (030) and the reduced probability of large resource lumps (129) are especially relevant.	
	Also tend to generate oblong continents near the poles, and <u>027</u> improves the selection of starting areas in such cases.

types, and a bit more for Pangaea.		Was supposed to be reduced (perhaps to the level of v3.15) only for Pangaea, but due to an apparent bug affected (only) 60% water instead.
Rationale	Corresponding to High, Medium and Low sea level. My 80% option actually does the same as the 70% option in the original script, the new 70% corresponds to the old 60%, and the new 60% is a new setting. I've noticed that far less land is generated than the old percentages said. My percentages are still too high. Actually, the ratios vary a lot. The new 60% option sometimes does lead to 40% land, but other times just 23%	
3.16 generally had more rivers than e.g. Fractal; I didn't like that. Not sure if I really needs special treatment. Seems to receive fewer rivers in any case (all longer ones than on maps with smaller continents).		ns to receive fewer rivers in any case (albeit
Tbd.	Make the script produce reasonable land ratios reliably. Should be the same as Fractal; see the frequencies stated under 021b. I probably won't ever do this because the PerfectMongoose script obsoletes Tectonics in my mind.

terrain and for various sizes match those Fractal frequ approximate 1% peak, 5% tundra, 8% p	ed the relative frequencies of all eature types for Fractal maps of s, and tried to get PM to somewhat frequencies. For reference, the sencies at Low sea level are ly 28.5% land, 7% forest, 2% jungle, 6 hill. 6% river, 3% desert, 3% plains, 12% grassland. Only 20% um sea level, 15% at High.	The land ratio is really hard to predict unless the break-Pangaea option is disabled. Assuming a land ratio of 28.5%, forest typically covers about 10% of all tiles; 2% jungle, 3% peak, 9% hill, 5% river, 4% desert, 5% tundra, 7% plains and 7% grassland.
31% land rat (High). With	cies I've ended up with are closer to tio (Low), 25% (Medium), 19% Old World Starts, the script often a continent up, which results in atios.	
and more pla but shorter o		A larger tile grid is used for all map sizes, leading
Same map sizes as Fractal. to about 40% more tiles.		to about 40% more tiles.
Rationale	One goal is to let players set the same number of civs that they use for most other maps. Although PM now produces more land than Fractal (higher land ratios), the number of decent city spots seems to be about the same, and that's what matters in the end. The main reasons why PM produces more marginal or unusable terrain seer to be the large stretches of plains, clusters of hills and terrain generally being less mixed. I wouldn't know how to change that, and I rather like it. For one, it gives the various regions of the map more character. Marginal terrain can also present a third choice between stopping to expand and waging war; and it's a historically plausible source of Barbarians. That's why I've kept a slightly higher ratio of plains and hills.	
	I don't see realistic terrain proportions as an important objective. E.g. if there isn't quite as much desert as in reality, one can simply assume that a Desert tile repre a larger area than, say, a Grassland tile (i.e. not a scale model), or that some aric regions of the Earth are represented as Plains or Tundra in the game. The LoR SDK ModMod makes some changes to PerfectWorld2, but these are probably obsoleted by LunarMongoose's work. Changes by Fuyu in RevDCM are minor and obsoleted by my own changes. Likewise those by Antmanbrooks for Realism Invictus.	
		Jungle only on grassland. Jungle is less dense than on other maps, but extends a bit farther north and south.
	non-desert tiles are OK. No cold	Oases only on tiles entirely surrounded by desert. Sometimes large deserts are placed right next to tundra.
Rationale	Jungle on plains makes jungles a bit grassland in the tropical latitudes.)	less scattered. (PM places a mix of plains and

	Oases that are totally surrounded by	desert are rarely useful.
Reduced the amount of land near the poles. Often generates an Antarctica-like continent connects temperate continents.		Often generates an Antarctica-like continent that connects temperate continents.
Limit the scope of the map to 80° latitude.		Up to 90° latitude (same as most maps), but configurable in the script.
Rationale		nies can't traverse a polar desert), and wouldn't ortance of ships, and long attack paths are difficult
		egant way to reduce the extent of uninhabitable crificing realism. For reference, the Arctic Circle latitude.
starting plots is handled almost entirely by the DLL functions that most other map scripts use for sometimes at least 2 hills.		
Rationale	The PM normalization code can lead to awful starting locations. BtS might do a bit too much balancing (especially for a map that's supposed to look natural), but, fortunately, I've already made some changes (id 108) that make the balancing a bit less aggressive.	
improvemen	lue from the DLL (with many ts by karadoc and some by myself; for pre-selecting tiles on which civs	A custom function "PotentialValue" is used.
Rationale	AI_foundValue has the same purpose as far as I can tell and is (now) much more sophisticated than PotentialValue.	
Tbd.	Should perhaps also replace Potent	cialValue in other places.
Starts in/ nea islands are r	ar the polar zone and on small uled out.	Starts on small islands and near the poles (not rarely both) are possible
choosing sta	r priority on mutual distance when rting plots, especially when the map	Not rare for civs to start just 5 tiles apart from each other.
•	a function of the number of players, ea level and Old World Starts).	Inland starts practically never occur; probably
Added some code that encourages one starting plot per continent to be placed inland.		mostly because coastal starts lead to greater pairwise distances and because of the shapes continents, low average river length and lack o food on inland tiles.
Rationale	It's nice that civs mostly start at the coasts because most of the early civilizations' capitals were situated at or near a coast. But of course inland starts should also occur	
Tbd.	Inland starts are still too rare. The code for selecting starting locations in the DLL doesn't have this issue, but doesn't take land reachable via Galleys into account, and think the PM code does.	
After PM has selected a starting plot for each civ, the standard algorithm (CvGame) may swap plots based on difficulty setting. For the standard map scripts, CvGame:: assignStartingPlots tries to assign starting locations based on difficulty. PM doesn't call CvGame::assignStartingPlots and doesn't		

		take difficulty into account; locations are randomly assigned.
Rationale	Don't want the game to be easier on PM than on other maps.	
See also	Requires <u>108b</u> (a DLL change).	
Config	If the AdvCiv version of PM were included in another mod, this change would have no effect.	
(CvMapGenerator). Fur can only be placed on flat tiles, and only above a latitude of 35°. This applies to all map scripts.		Custom code for resource placement. Seems to be largely the same as in CvMapGenerator. I guess cephalo wanted to make some changes without changing files other than the map script. The BtS map generator places Fur on flat and hilly Tundra and Snow tiles at any latitude. Since PM uses Tundra and Snow (usually as hills, but not always) to represent high elevations, Fur can appear fairly close to the equator. Deer is restricted to latitudes above 30°.
Rationale	Rationale I want my own changes (129) in CvMapGenerator to apply. Also, for whatever reast the PM code creates large clusters of resources. I've seen e.g. a 2x3 rectangle fille with Ivory on a Small map. Fur near the equator could represent savanna fauna, but, in BtS, that's clearly not	
idea. 35° is still pretty far away from the poles, but, in combination with the no- restriction, it should be OK. Fur on hills doesn't make perfect sense to me any the most widely known fur-bearing animals (beaver, ermine, mink) live near wa which tends to be more abundant in flatlands (mountain valleys too, I guess). F fresh water should be required?		ills doesn't make perfect sense to me anyway as nimals (beaver, ermine, mink) live near water,
Map options for land generator and climate system removed. Always use the defaults: PW3 Square Grid and PW3 Climate System.		Options "PW3 Generator (Square Grid - Accurate)", "PW3 Generator (Hex Grid - Interesting)" and "PW2 Generator" for landmass generation; and "PW3 Climate System" and "PW2 Climate System" for climate.
Rationale	I don't see much reason to use the old PW2 code, and it would've been a lot of work to adjust the land, feature and terrain ratios for PW2. As for the "accurate" versus "interesting" choice – how is a player supposed to decide this? I just went with "accurate" because that code was newer and it was the default setting.	
if and only if the Old World Start option is set. The limit for the number of meteors is based on the map size and sea level; no more than 9 (Huge map, Low sea level). The average diameter of meteors is about 5 tiles. Inside that diameter, the elevation is decreased. The decrement is maximal in the center and becomes gradually smaller toward the edge of the crater. This way, there are usually(?) no Peaks on coastlines created by meteors.		think) based on the <u>betweenness centrality</u> metric. The number of meteors is limited to 15,
		the average diameter appears to be about 15 tiles. The larger the map, the smaller the diameter (this appears to be a bug). All tiles in the diameter have their elevation set to 0. Since Peaks are placed (in a later step) based on differences in elevation, coastlines created by meteors are (always?) covered by Peaks. Since

meteors fail resulting in a total land) or Normal and	a level, its fairly common that to break up the largest continent, a small New World (e.g. 20% of the just a few uninhabited islands. With High sea level, it seems that a New ated pretty reliably.	the total number of Peaks to be placed is limited by a target ratio, few or no Peaks get placed inland. The meteors normally succeed in eliminating any 70%-sized continent, but may remove so much land that the map looks like a plucked goose and the Old World becomes very crowded.
Rationale	My changes make the meteors almost invisible. It's a nice metaphor for explaining how the algorithm works, but the meteor impacts shouldn't actually show up on the map because a real meteor strike doesn't significantly alter coastlines. Since PM is able to identify choke points, a few small meteors can suffice to break up a continent.	
	regenerate the map," but I think som	e "failed to generate multiple continents; please ne uncertainty about whether there's a (sizeable) need to be aware that it's not guaranteed.
Tbd.	Could further minimize the tiles affected by meteors by undoing meteors that fail to break up Pangaea. Not so hard to implement. E.g. first check if any single meteor can do the job, then try pairs etc.	
See also	I've added a recommendation about the number of players to the label of the Old World Start option. This is consistent with change <u>137</u> , which adds such recommendation labels for Low and High sea level.	

022	Changes to AI paranoia	
See also	107 also deals with the Al's defensive strategies 109 sets Economy Focus when no threatening civ is known 130u treats human civs as Cautious toward everyone	
Tbd.	I've considered basing paranoia on enemy war utility (if <u>UWAI</u> is enabled), but, so far, the K-Mod code seems to work well enough alongside UWAI (if it never correctly anticipated UWAI attacks, that would be bad).	
AdvCiv		K-Mod/ BBAI
attitude and versa. Huma moderately to on the AI civ Made a simil	a value of an AI civ is based on the personality of rival civs, not vice an rivals are assumed to be pellicose with an adjustment based is attitude toward them. Ilar change in the computation of (non-immediate military threat v); using a mix of defender and cude there.	Paranoia is computed as a function of vicinity, power ratio, our attitude and personality, their victory strategies and whether we're their worst enemy. Paranoia determines if the BBAI strategies "Economy Focus" (low paranoia) or "Alert1" and "Alert2" (high paranoia) are adopted (neither if medium paranoia).
Decreased i	mpact of rival victory strategy.	Paranoia is greatly increased if a rival is at
Increased impact of geographical closeness; except when not on the same landmass.		stage 3 of Domination or Conquest victory.
Some other, minor changes.		
Rationale	Rationale A K-Mod comment in the CityThreat function says, "For good strategy, this should probably be their attitude rather than ours. But perhaps for role-play it is better the way it is."	

	For CityThreat, I think both arguments have merit, so I'm averaging the attitudes in this case. As for paranoia, producing additional defensive units against a benevolent rival makes little sense roleplay-wise, and can be quite damaging for the AI, therefore, only use the neighbor's attitude in that case.	
See also	107 changes the computation of closeness between civs.	
	Reduced paranoia if the threatening civ is so powerful that resistance is likely futile. The more powerful they are, the more paranoid we get.	
Rationale	tionale "Things without all remedy should be without regard."	

023	Occupation countdown based on revolt probability	
AdvCiv		BtS/ K-Mod
is decremer	tion timer (after conquest or a revolt) nted only with a per-turn probability tenth power of 1 minus the revolt	The occupation timer is decreased by 1 each turn.
	minimum of 3 and the population	Occupation after conquest last for 3 turns plus 50% of the population size, e.g. 13 turns in a size-20 city.
A revolt sets prior revolts	•	Also 2 in BtS and in K-Mod 1.45 (but 3 in earlier K-Mod versions).
		Unlike combat strength, garrison strength is unaffected by damage.
timer is sho	n chance to decrease the occupation wn on the main interface (city tile and on the city screen (Nationality bar	
Rationale	BtS occupation times get too long in Renaissance; one reason why it's difficult to catch up at that point. 10 turns is a very long time when the game may last just 100 more turns, and the city may still have to spend some 20 turns on essential buildings before it starts paying off.	
	By basing the occupation duration on the revolt probability, I hope to reward play that conquer only one or a few cities at a time and can then afford to sit in them to make occupation end quickly. Generally, occupation durations are still going to increase as the game progresses – mature cities tend to have high revolt probabilities. Now, 3 turns is often just the time that units need for healing anyway this would hardly slow down conquests if it weren't for the reduced garrison strength of damaged units.	
	I'm not showing a message when arbecome too much when occupying	n occupation counter is decremented; could several conquered cities.
Config	The conversion of revolt probability into the probability of decrementing occupation can be tweaked in GlobalDefines_advc.xml. Can also restore the BtS rules there (longer but deterministic occupation).	
See also	See also 101 reverts the K-Mod changes to revolt probability. 099c makes revolts more common by allowing them to happen outside of foreign culture range. 023 wouldn't really work without 099c because, in BtS, conquered cities often have 0% revolt chance. 210b displays an alert when occupation ends.	
Revolts can't happen in occupied cities (conquest No revolts during occupation or prior revolt) if the city owner is at war with the cultural owner. If they're not at war, a revolt in occupation is possible, but mitigated by the following special rules:		tNo revolts during occupation.
	t test is only executed if the nt-timer test has failed.	
Revolt pro	obability is halved while in occupation	
	uring occupation does not increase pation timer; it does increases the	

revolt cou	nter and can flip the city.	
Being at war strength.	does not increase culture garrison	Culture garrison strength doubled while at war.
Rationale	If revolts were impossible during occupation, a player could withdraw all units to deliberately prolong occupation, which makes the city worthless for the current owner but also for the cultural owner (can't flip).	
	Regular revolts during occupation would be too punishing though. The halved probability only makes up for the loss of garrison strength when units are damaged part of a revolt.	
	see a better solution. Or perhaps a c	al rules for revolt during occupation, but I don't sity should flip deterministically after spending 10 (unless at war)? That would be a bit simpler.
•	city heals units only as fast as a city tile (15 HP per turn).	An occupied city heals as fast as an unoccupied one (20 HP per turn) except that Hospital doesn't count while in occupation.
Rationale	Ale For plausibility and to slow wars of conquest down a bit more. 10 HP per turn (heal rate in neutral territory) might be even more appropriate, but then players could heal units faster by moving them onto some owned tile adjacent to an occupied city, which would be counterintuitive and tedious.	

024	Order in which AI contacts other AI randomized	
AdvCiv		BtS
When contacting other AI civs for trades, the AI goes through them in a randomized order.		Fixed order based on the player slot id.
Rationale	Some deals aren't mutually exclusive, but the AI can e.g. give away a resource only once, and may only have enough gold to convince one civ of a joint war. The fixed order leads to a slight bias for trading with AI civs with low ids.	

025	Reduced culture spread by capitulated vassal onto master's tiles	
AdvCiv		K-Mod
The tile culture spread by a city onto a tile is halved if the city owner is a capitulated vassal of the tile owner. Capitulated vassals spread their culture no the tile owner.		Capitulated vassals spread their culture normally.
	Even if cities can't flip to vassals (change <u>099c</u>), the revolt-inciting culture spread is still a good reason not to accept capitulations. It's OK if capitulation isn't always the correct choice, and perhaps this is an interesting dilemma, but capitulation should be correct more often than not, and 099c makes it much harder overall to keep revolts in check.	
Config	Through GlobalDefines_advc.xml	
See also	130v neuters capitulated vassals in several ways	

026	More gold offered in Al-proposed deals	
AdvCiv		K-Mod
When an AI civ contacts a human with a trade offer, when trying to balance both sides of the deal, the AI is willing to give away more gold than normally. If the player negotiates, the extra gold is no longer offered.		The AI can offer deals that are slightly more favorable to the player, but the portion of the AI treasury offered for trade isn't increased.
Rationale	The aim of the K-Mod change was to make it "worth considering the deal the AI offer [] rather than going straight to the renegotiate button" (from the K-Mod 1.07 changelog). But a worthwhile offer still seemed very rare, so, while worth considering it didn't exactly hurt to never consider AI proposals.	
Config	AI_OFFER_EXTRA_GOLD_PERCENT in GlobalDefines-advc.xml	
Tbd.	A general problem with any one-time offers: If the player can't just click "renegotiate", then the player doesn't know what else the AI might have. Encourages the player to routinely enter the Foreign Advisor during diplo. The only fix I can think of (other than removing the one-time offers) is to have the AI remember its initial offer. Then, if the deal is renegotiated, that offer remains available through "what would make this deal work": If the player offers to give the AI what it had originally asked for (or that and sth. in addition), or asks for what the AI had originally offered (or a subset of it), the AI suggests the original offer unless it finds an even better one. This way, the player would again always renegotiate, but would still take a look at the original offer in order to possibly get back to it.	
	For now, I've added a loading screen hint about opening the Advisors during dip	
counted for "fair and forthright" trade if		is more attractive: Increase the trade value e if an AI offer is accepted without renegotiation or trade with worst enemy). Or even decrease faired.
		des are often worse than the trade resulting from I make this deal work?". Should check a tech trade to the player.

027	Changes to the selection of starting plots	
AdvCiv		BtS
continent, co tiles that are desert. Take		When starting locations are not determined by the map script (and most map scripts don't), then a starting continent is chosen for each player by CvPlayer::findStartingArea. That function computes a score for each continent and selects the one with the highest score. Part of the score formula is the number of river edges, the number of coastal land tiles (to account for the water surrounding the continent) and the total land tile count. Bonus resources don't count directly, but the total of all tile yields does.
Rationale	Too many civs had been placed on continents near the poles.	
Tbd.	Would be better to evaluate the surrounding water directly (than to count coastal land tiles); should be pretty easy to do through the Shelf class that I've added in change 300. Should perhaps sometimes, at random, leave a small-ish continent empty. This would make Fractal a bit more unpredictable (a good thing in my mind), but could lead to crammed starting locations.	
See also	108 is concerned with the normalization and assignment of starting plots (after they've been selected).	
land tile with	If cheats are enabled, Shift+Ctrl+mouseover on a Various combinations of Ctrl, Shift and Alt reveal land tile without any units shows a breakdown of the starting area score.	
Rationale	I've used this to figure out where the assignment of starting areas goes wrong, and left it in the code for future adjustments.	

028	Submarines as escorts	
AdvCiv		BtS
When a stack with invisible and visible units is attacked, the attacking player sees combat odds against the best visible defender, but an invisible unit may replace that defender once the attack is ordered, i.e. if the invisible unit is the better defender (considering unit cost and combat odds). Invisible units don't defend if all the team's units in the tile are invisible (same in BtS), i.e. an		, ,
	e't stumble upon an invisible stack, e units don't defend units of other	
Rationale	Not plausible for a Submarine to sit by while e.g. a fully loaded Transport gets attacked by another Sub. The new behavior makes Subs worse in situations when the defenders are outnumbered by modern ships, e.g. a Transport (or just a Work Boat) and a Sub against four Battleships. That said, players can easily prevent this by not stacking Subs with visible units. All in all, the change should make Subs (and Stealth Destroyers) a bit more useful.	

029	Changes to recon missions	
AdvCiv		BtS
until the <i>end</i>	of the subsequent turn of the recon	Visibility ends on the <i>start</i> of the owner's subsequent turn. If the options for showing foreign moves are enabled, the player still sees all foreign moves before the fog of war returns.
mission is ca	arried out early in a turn (manually), ther units have moved (auto recon or	Auto recon and queued recon missions are barely usable because tiles are only visible from the end of one turn to the start of the next.
Rationale	During the owner's turn, nothing happens in the fog of war, so there isn't much of a point in hiding the tiles at the start of a turn. (It can make a difference for air strikes.) The advantage of my change is that players no longer need to remember which units had been visible, and it makes it easier to automate recon.	
Tbd.	Would still be nice the have a "Recon until canceled" mission that repeats recon on the same tile every turn (akin to the Blockade mission; on that note "Blockade for one turn" would be nice to have too). OrionVeteran had started to implement something like this, but didn't finish it.	
	I'd like to nerf recon a bit by allowing units on recon to be intercepted, ideally even when not at war (and no OB). And reduce the number of revealed tiles (-2 radius), especially for non-recon air missions (-3 radius).	

030	Peaks can separate areas	
Config	PASSABLE_AREAS flag in GlobalDefines_advc.	
AdvCiv		BtS
landmass un	r several peaks make parts of a preachable by land, that secluded and as separate land area.	Only water can separate land areas.
Rationale	Should make things easier for the Al obstacles because of closed borders	. The AI still has to be able to handle dynamic s, and it can (but not that well).
	landmasses, but that seems like too	olonies and single-continent wonders on BtS much work. When e.g. Notre Dame is completed geBuildingHappiness on all areas with the
Tbd.	The additional areas increase savegame sizes and memory usage by a few KB. Could offset this by not having water areas allocate memory for e.g. each civ's building effects. About a dozen arrays are unnecessary for water areas. Could set these to <code>NULL</code> in the constructor and allocate memory only when an area becomes a water area, i.e. when <code>CvArea::reset(id,true,false)</code> is called. Accessors would have to check whether the arrays are <code>NULL</code> .	
	Could also eliminate water areas that	at are entirely enclosed by ice.
unreachable separate wa let the civs s Warrior (i.e.	ce makes part of a water area, that secluded part is treated as a ter area. Exception: In scenarios that tart with more than just a Settler and don't call CvGame::setInitial er areas are as in BtS.	
(No change	to the trade rules.)	Trade cannot pass through ice (nor peaks).
movement s	e a lot of code related to unit o that the AI recognizes that can pass between adjacent water	The AI handles submarines well, but builds all sorts of ships in cities cordoned off by ice.
areas.	can pass between adjacent water	Barbarian ships can also spawn trapped in ice.
is not suppor	ous canMoveAllTerrain unit ability rted by my code. (Shouldn't crash, on't be aware of potential attacks.)	I don't think the BtS AI supports it either. Anyway, no unit actually has this ability. (Gunships can't enter water.)
global warmi recalculated	added or removed (WorldBuilder, ing), the water areas are not , i.e. the AI remains unaware if e.g. st Passage opens up.	
A city adjacent only to an ice-locked water area of fewer than 10 tiles can't construct buildings like Lighthouse that require an adjacent water area of at least 10 tiles.		
Rationale	Shipbuilding in ice-locked cities makes the AI look very bad.	
Tbd.	Can't recalculate the water areas in a running game because various statistics and Al data are stored at the $CvArea$ objects; hence the exceptions for scenarios and global warming. Another issue is that placing a Peak through WorldBuilder currently leads to recalculated land areas, which should be fine when creating a scenario, but bad when play is supposed to continue after exiting WorldBuilder. Should bite the bullet and	

rite code that preserves per-area d	ata after recalculation.
Also, plot groups (for trade network) aren't currently updated after removing ice. (That's not an issue introduced by change 030, but still)	
Or, if I can't do the above, I should at least change global warming so that Ice can only melt when it is orthogonally surrounded by water (so that water areas are unaffected by global warming).	
Could limit the (step) diameter of water areas (by limiting the search depth of the calculateAreas_visit function), which might help the AI when the geography resembles the American continent (minus the Panama Canal). Then again, distances between coastal cities are rarely long enough to make naval movement between them impractical.	
Regarding Lighthouses in ice-locked cities: Easier to implement this way. Also plausible that a lighthouse isn't helpful in a city that is locked away from maritime trade.	
 033: The checks for naval blockade had relied on water areas not being adjacent to each other, so I had to change these checks. 051 is responsible for calculating areas in scenarios. 	
Fractal-based map scripts are two times less likely to place a Peak on tiles orthogonally adjacent to water than on other tiles. It seems that Peaks are just as likely near as inland. A Peak that is orthogonally adjacent to water than on other tiles. water can make part of a landmass inactive via land. (Inland Peaks could do that too theory, but would have to form a circle.) Almost(?) all map scripts bundled with Cid/Warlords/BtS are based on Fractal, but PerfectMongoose isn't.	
	4/Warlords/BtS are based on Fractal, but
On Earth, a drop in height from above would justify a Peak next to a wate particular in the Central Andes. Still, the traversed even by an army, so Periot realistic. Then again, the Darién Camericas. Rationale	A river (or oasis) without resources in Flood Plains).	s rare, but can be worth settling on (esp. with
		to be careful not to revive the AI habit of planting ritory. I think that used to happen in Vanilla Civ 4
Fixed a likely bug in the K-Mod evaluation of additional copies of a resource near a city site.		Especially extra copies of strategic resources had been way overrated.
Utility of happiness/health/strategic resources (i.e. not the utility from yield) halved when the resource can't be worked yet. Further reduced if there is already an improved copy available.		Utility computed as if the resource could be worked. Unimproved copies not taken into account. This leads the AI to aggressively settle near any Oil sources when Oil isn't yet workable.
Reduced the penalty for bad tiles near a city site by subtracting a multiple of the number of bad tiles rather than dividing by it. Decreased the base utility that the found value starts at.		Sites with 10 or more bad tiles practically never settled. The bad-tiles check seems to be the main guard against settling land that isn't (ever) worth settling.
Utility reduced when a site has very little food; to the point of making the AI unwilling to settle completely dry areas. The penalty is not applied to resource trade values though, so the AI could e.g. settle in the middle of a desert in order to ge access to Oil.		The code that checks the available food only takes into account food on resource tiles, along the lines of "the Grassland Cow will allow this city to work its Plains Hill Gold", but doesn't take into account e.g. regular Grassland Farms, and the low-food penalty is rather moderate. It applies to the trade values of resources though (although trading/ sharing of resources does not require the tile to be worked).
	t and tundra hills counted as bad tiles count as half bad.	Hill and ocean tiles are never counted as bad (nor half bad).
	ource enables units, the AI power XML) of those units are factored	Evaluates the unlocked units only based on how useful they are compared with other currently

into the utility value of the resource (which, in available units. Tends to overrate Iron and turn, factors into found value). underrate Oil and Uranium (once they can be worked). Increased the utility counted for yields from Utility is assigned based on the total yield from bonus resources, especially if these yields are bonus resources (assuming they're all improved provided from a small number of powerful and worked): the number of resources doesn't matter in this context. resources. The per-tile utility values are decreased by a The per-tile values are mostly based on tile constant, then sorted in descending order and vields. The values are summed up without multiplied by decreasing weights. The total is weights (or with uniform weights if you will). A multiplied by a normalization factor to keep it on special penalty is applied for "bad" tiles toward a similar scale as in BtS. The special penalty for the end of the found value computation. bad tiles is much lower than in BtS. The subtracted constant represents the food consumed by the citizen working the tile Rationale and largely replaces the bad-tile penalty. The food consumption is the reason why e.g. a yield of 2 food and 2 production is about twice as good as 2 food and 1 production. The weights give the AI a tendency to prefer a few good tiles over a lot of mediocre (or marginal) ones. A few powerful resources (e.g. Gold, Pig) are preferable to several weak resources (e.g. Silk, Fur) because, in the latter case, it takes longer and costs more food to grow the city enough to work all the resources. Also, while cities with few worthwhile tiles aren't very profitable, they also don't cost much maintenance because the population stavs small. Tbd. Shouldn't count bad tiles at all. The counting of "special" yields from resources is also dubious; should be possible to cover these through the tile weight distribution. The "taken" tiles count also seems redundant. Utility threshold for founding a city increases Increases only based on number-of-cities throughout the second half of the game. maintenance, not game progress. Threshold lowered based on the number of Threshold lowered based on total city owned corporate HQs. maintenance (to prevent overexpansion), which includes corporation maintenance and can lead to very high thresholds once corporations have spread. Rationale Toward the end of the game, too little time remains for cities to become profitable and amortize. Corporations can cause high city maintenance before the Modern era, i.e. not that late in the game. At that point, high city maintenance shouldn't worry the AI too much because the corporations bring in high yields that can be turned into gold if necessary. AdvCiv BBAI Reduced the utility assigned for access to the Code added to encourage coastal cities for more sea, especially when the site doesn't offer much Al shipbuilding, but doesn't take into account how production, when already having many coastal much production these cities would actually have. Also adds a clause that gives a substantial cities and when playing on Pangaea. extra boost to coastal sites when fewer than 25% Nothing to encourage the AI to found at least of the owned cities (rounded down) are coastal. 25% of its cities at a coast. This can lead to coastal cities in totally awful sites. The current code may still encourage more AI coastal cities than would be rational, Rationale and that's OK with me if it helps make naval units viable. But I see no reason to have

The Financi tile yield.	Only done for river tiles, not for coastal tiles. A civs with a unique naval unit or coastal buildin have a preference for coastal spots, but the Financial trait has no such effect.	
See also	The nerfed Financial trait (908a) still	benefits coastal tiles.
Al leaders with Growth flavor are more inclined to settle at a plot distance of exactly 6 tiles from the nearest city than leaders without Growth flavor. Plot distance is computed as max{deltaX,delta+ floor(0.5 * min{deltaX,deltaY}).		plot distance of 6 or more(!) from the nearest city. Plot distance is computed as max{deltaX,deltaY}
Rationale	Growth flavor should mean that a leader likes big cities, so the city radii shouldn't overlap much. Cities that are 6 tiles apart don't overlap; shouldn't encourage even larger distances that may lead to unworkable tiles (or a another city getting crammed in later on) and high distance maintenance in the early game.	
areas), four	When a tile connects two seas (non-Lake water areas), found value is increased based on the size of the smaller of the two seas. The possibility of a canal does not affect found value. The AI considers canals when placing Forts, but only under narrow conditions, and round the tiles, meaning that the AI can't establish a canal after settling in the city radiu around the tile that allows for a canal.	
See also	121 (partly) deals with the Worker A	I for Forts as canals
Tbd.	This only works if the two seas are fully separated from each other by land or (throug change <u>030</u>) ice. Will have to call the pathfinder to identify mere shortcuts like in Panama or at Suez. Could do it as follows:	
	At the start of the game let CvGameAI compute a canal value for every land tile. It would be better to do this e.g. once per turn and for each team independently based on the revealed portion of the map and OB agreements, but I think this would be too costly to compute. The canal value of a tile T should equal the number of movement points saved by ships passing through a canal in T. Algorithm: Iterate over the tiles adjacent to T in clockwise order (very cheap to do). Make a list of all water tiles encountered directly after a land tile. In most cases, that list is going to be empty or a singleton; this means the canal value is 0 or very small; set it to 0. If the length of the list is greater than 1 (maximum: 4), i.e. if there are adjacent water tiles separated by land, run the pathfinder on each pair of tiles in the list. Set an upper bound for the path length somewhere between 30 and 40 (won't care if the shortcut is even greater) for efficiency, and let the pathfinder only worry about water, land and impassable tiles.	

Store the maximum of the computed path lengths as the canal value. Use the canal value for the AI placement of cities and Forts.

032	Signing a peace treaty when there already is one causes turns-to-cancel to be reset	
AdvCiv		BtS
that already to-cancel are through a dip change <u>146</u>)	When a peace treaty is signed between two civs that already have a peace treaty, then the turns-to-cancel are reset to 10 turns. This can happen through a diplo vote or sponsored war (due to change 146). I don't think gifts and demands are possible when there is already a peace treaty.	
Rationale	More intuitive this way. Otherwise, e.g. the target of a UN peace proposal could get attacked just one turn after the vote.	

033	Changes to naval blockades, Privateer		
Tbd.	Try excluding Privateers from "show enemy moves". When are messages about pillaging and Privateer combat shown to the player then? Combat log? Is it still possible to deduce the owner of a Privateer from the turn order? Try delaying these messages too.		
	The movement bonus from circumnavigation can also reveal a Privateer's identity; intend to replace that ability with some trade route bonus.		
	Or give up the secrecy; seems historically dubious anyway. (<u>Wikipedia</u> : "The convention was a vessel must hoist her true colors before firing the first shot.")		
See also	007 reveals the owners of Privateer	s when in Debug mode	
AdvCiv	BBAI		
the plunder	Then collecting gold from Privateers, compute the plunder range based on path distance (e.g. path distance for blockaded tiles, but seems that across an isthmus). BtS does it all based on air distance. BBAI upon the plunder code a well.		
Rationale	Or they had been worried about performance, but I'm only checking cities adjacent to blockaded plots, which should be quick.		
See also	030 (ice-locked water areas) depends on this change. 124: Can use blockade to let trade pass through hostile tiles.		
AdvCiv	BtS (BBAI and K-Mod made some changes to the Privateer AI, but the basics are unchanged)		

leader's attitutech known to doesn't use improvementhis context cattitude is edattitude. AttitudeThattack. This to	ing a city to plunder, the AI takes its ude toward the city owner and the to the city owner into account. The AI Privateers against ships and ts of partners. What a "partner" is in depends on the AI personality. If the qual to DeclareWarThemRefuse reshold or worse, AI Privateers will threshold is Pleased, Cautious or all leaders except Catherine	Al Privateers behave largely like Barbarians and treat all civs except the Privateer's team alike.	
Rationale	It's not smart to use Privateers against one's partners, especially not for attacks and pillaging. An attack puts the Privateer at risk for no gain and the gold from pillaging water improvements is negligible. Plundering a partner should be OK when there is no one else to plunder.		
Tbd.	Privateer attacks on ships should have some upside for the Privateer owner. Stalking ships is fun, but just not rewarding. A ransom mechanism would be nice because it would also curb the losses of the owner of the attacked ship, but too much work to implement at this point, and no other mod seems to have implemented this either. A chance to steal the ship (in a damaged state, and any cargo transformed into a single Worker)? Captured Caravels wouldn't be very useful though		
See also	130v makes vassals Friendly toward their master.		
Civs in a vassal-master relationship can't pillage each other's improvements with Privateers, can't block tiles from being worked (CvUnit:: canSiege) and can't blockade each other's cities. They can still attack each other's ships through Privateers, and no restrictions apply to vassals of the same master.			
The AI never attacks ships of its vassals or master. (That's the idea anyway. Seems difficult to guarantee this) Al Privateers attack anything that comes near them.			

Rationale	be OK, but a master plundering its vassals (voluntary or not) is jarring; the master supposed to protect the vassal. An Al change wouldn't stop a human master from harassing his/her vassals, so this has to be prevented on the rules level.	
	l've considered changing CvUnit::isEnemy and getCombatOwner so that Privateers of vassal/master behave as if they're on the same team, and revealing the Privateer owners' identities between vassal and master. This would entail the following: • can't attack each other and can coexist in the same tile • can heal in each other's territory and enter each other's cities • can't blockade each other • moves shown as friendly • Privateers not seen as a threat by the Al	
	This would be a pretty clean approach, but goes a bit too far I think. Implausible that everyone on the vassal's and master's side knows a Privateer's identity, but other civs have no clue. Submarines aren't revealed between vassal and master either.	
If the owner if a vassal/master Privateer is to remain secret, then it has to remain secret, the remain secret secr		ateers; otherwise one could tell who the owner is. ney should also be allowed to fight back, so, no a little strange that combat is possible, but not
Credits	Cruiser76 raised the issue <u>here</u> on 0	CFC.
See also	123e makes it impossible to plunder Barbarian cities	
Tbd.	When using a Privateer to attack a unit that the Privateer owner is not at war with, and hovering for combat odds, the mouse cursor shows a white circle. I think it should be a red circle like for all other attacks. This isn't a result of my changes; it's a white circle in BtS too.	
	vassals only train Privateers if they ave no other general purpose naval	Capitulation doesn't affect the training and behavior of AI Privateers.
		There is a unit "viability" check
All civs stop training Privateers once the game enters the Industrial era.		(CvPlayerAI::AI_calculateUnitAIViability) to prevent the production of outdated units, but that's based only on units that the same civ can train, not the global tech level.
See also	130v makes capitulated vassals sub	servient to their master in most regards.
Rationale	Capitulated vassals shouldn't even indirectly interfere with their master's goals. Don't want them to use Privateers against civs that the master might like (with a human master, one can never tell) and don't want a blockading Privateer to affect the master indirectly e.g. by cutting off some important sealane.	
Civilopedia and help text. trade bloc		Only mentioned on the BtS concept page about trade blockades. For the Privateer, only the hidden nationality ability is listed.
		A feat message ("Congratulations, you have trained your first Privateer") also explains plundering, but that's a one-time notice.

Rationale	Technically, the Privateer doesn't have a special plunder ability. Any ship can collect plunder if it can manage to blockade a city without declaring war. This rule is very obscure though; need to list plundering as a separate ability.	
	Also, when a player wonders why a Privateer can't plunder a vassal, that player may look up the Privateer in Civilopedia, and there it'll now say that Privateers have the ability to plunder <i>rival</i> cities.	
Al civs don't blockade Barbarian cities. Not sure if the BtS code actually targets Barbarian cities for blockades or only ends u blockading them opportunistically while bombarding.		Barbarian cities for blockades or only ends up blockading them opportunistically while
Rationale	No gain in starving Barbarian cities.	
Tbd.	Naval bombardments of Barbarian cities might still happen, and then the AI would also blockade. There's no point in this because Barbarian cities normally only have building defense, and by the time Frigates become available, most AI land units ignore building defense.	

034 Temporary Open Borders after war	(optional through XML, disabled by default)
AdvCiv	BtS
When a war ends, an Open Borders (OB) agreement is automatically signed between the former belligerents. Units aren't bumped until that agreement ends after a configurable number of turns (recommended: 3 to 5). It's a special OB agreement, internally called a "disengagement" agreement, that does not affect trade and diplomacy; only a right of passage for units.	When a war ends, units are immediately bumped out of rival territory, teleporting to the nearest tile that they can legally occupy. The AI is not programmed to anticipate this.
Details about the temporary OB agreement:	
 No movement bonus from roads and railroads. 	
 No risk of getting caught for idle and moving Spies. 	
 Canceled when a proper OB agreement is signed, or when a Vassal Agreement or Permanent Alliance is signed. 	
Shown as "Open Borders (x turns)" on the scoreboard and in other help text.	
 The turn on which peace is made counts as the first turn. When it says "1 turn" remains, then the agreement is canceled at the end of the round. 	
Unaffected by embargoes.	

Rationale	To allow the AI to reposition its units after a war, in particular, to prevent large AI stacks from getting stranded. This happens quite regularly when the AI conquers a remote city, and it can be very harmful for the AI because it still counts on those uni when when deciding on war/peace against a third party and when calculating need floating defenders. The change also reduces unit bumping, which is a pretty strangmechanism.	
	The ability to explore the territory of a former war enemy just after the war ends is highly immersion-breaking though. It's worse than I had anticipated before implementing this change.	
Config	Increase DISENGAGE_LENGTH in GlobalDefines_advc.xml to enable this change.	
Tbd.	Not properly tested. The "You have made peace with" message (CvTeam::makePeace) should also mention the Open Borders.	
See also	035 (also disabled) would also address the problem of stranded units. 099b (tile culture decay) addresses it a little bit. 046: Al improvements for units stranded on a different landmass and changes to the bump algorithm.	

035	While at peace, civs own all tiles that no other civ could work	
Config	Currently disabled (including the AI changes) through the OWN_EXCLUSIVE_RADIUS switch in GlobalDefines_advc.xml.	
See also	099b replaces 035. If 035 is enabled, then the <code>city_radius_decay</code> part of 099b should arguably be disabled. Revolt chance (101) is adjusted to 035 if it's enabled.	
Tbd.	Try letting civs only own those tiles in the exclusive radius where they're somewhat close to having the majority culture; e.g. set a multiplier $m := 75\%$ and let civ A own tile T in its city radius if culture(A,T) > m *culture(B,T) for every civ B that does not have T in a city radius, and culture(A,T)>culture(C,T) for every civ $C \neq A$ that does have T in a city radius. I guess inner and outer radius should be distinguished too. Perhaps too complicated, but, other than that, it might play better than the decay in 099b.	
AdvCiv	BtS	

A civ can only own a tile when that tile is either within the (workable) radius of one of the civ's cities, or when it's not within the radius of any cities that the civ is at peace with. I.e., at peace, cities own all tiles that they could work and that no rival city could work, and the highest culture value only matters for tiles in overlapping city radii and for tiles that are in no city radius. At war, tile culture matters on all tiles contested between the war parties, and thus some tiles may flip when war is declared and when peace is made. A unit that was about to cross the border can get bumped back upon declaring war.

The civ with the highest tile culture owns a tile so long as that tile is within the culture range of one of the civ's cities (up to 6 tiles depending the city's culture level). Thus, tiles within a city's radius can belong to a civ that is too far away to work the tile, meaning that no civ can work it. War/ peace does not affect tile ownership.

Minor AI changes (more below)

Forts: Don't build them on tiles that will flip when at war.

Pathfinder: When moving to hostile territory and war is not yet declared, try to avoid tiles that are going to flip to the enemy upon DoW, and prefer enemy tiles that are going to become friendly.

Rationale

It's implausible that tiles near a city can't be worked by anyone. At least, this shouldn't happen as commonly as it does in BtS. It's a mechanism that encourages culture, but it does so mostly through punishment (loss of workable tiles). A civ with high culture gains tiles, but it's not much of a reward because that civ can't work them; it only gets bonus resources and a tactical advantage, which is somewhat neutralized by the diplo penalty for stealing tiles. My change preserves the tactical advantage.

Border tensions: When not at war, stolen tiles in overlapping city radii count 50% more than in BtS. Tiles that would flip when at war add to border tensions; the civ that would own them when at war is mad about them.

Rationale

The rules change result in fewer stolen tiles, but I don't want less border tension. The diplo penalty for tiles that flip when at war works against civs with low culture (good), whereas the diplo penalty for stolen tiles works against civs with high culture (not good, as in BtS).

See also

147 also changes the border tensions formula.

Al found value: Don't worry much about foreign culture on tiles near a city site, so long as those tiles are not within the radius of a foreign city. Take into account which tiles will flip when settling near a rival city.

Rationale

The AI should still avoid foreign culture a bit because tiles around the city will flip when the owner of the foreign culture founds a city nearby or when war is declared (making the city difficult to defend). Foreign culture will also add to border tensions (see above), and can cause the city to revolt.

See also

031 makes other changes to found value.

<u>UWAI</u>: Reduced utility penalty from culture-pressure penalty (GreedForAssets aspect).

Tiles lost by war enemies are counted as "lost assets", making the AI more reluctant to make peace when this will flip tiles to the enemy. Flipped tiles could also motivate the AI to start a war that otherwise looks like a stalemate.

Rationale

A peace treaty practically cedes the tiles around any lost cities to the conqueror. The AI needs to be reluctant to do that and factor it into reparations.

The AI assig turn, cash).	ns a fixed trade value to gold (per	The trade value depends on whether the AI is in financial trouble.

Rationale

The BtS approach means that the AI receives less gold in trade when in financial trouble. This makes some sense (you're in a bad position to negotiate when you need money badly), but isn't really intuitive. Finances factor into the amount of gold that the Al makes available for trade; that's good enough to prevent broke civs from overspending.

trade to another civ is adjusted based on the attitude toward that other civ except when the two civs are at war or when the AI civ is a capitulated vassal.

The gold per turn and cash that the AI is willing to The amount of gold that the AI is willing to trade is not affected by attitude.

Rationale

When e.g. an AI civ promises that it'll "never trade" with its worst enemy, that civ shouldn't be perfectly willing to pay gold to that enemy (but shouldn't refuse to pay any gold either).

This change should also make attitude matter more when tech trading is disabled.

Exception for capitulated vassals: Don't want the master or the master's friends to plunder the vassal.

Al memory about cash traded to other civs decays.

The AI keeps track of how much gold it has traded to every other civ. That amount is subtracted from the cash that the AI is willing to trade to another civ. This subtrahend tends to become negligible over time because the AI generally becomes willing to trade larger and larger sums of gold as the game progresses.

Rationale

The amount of gold that a civ is willing to trade (prior to subtracting gold-traded memory) can stagnate, and then the BtS AI can stay unwilling to trade any gold indefinitely. Also, pretty much all other AI memory decays in AdvCiv (cf. 130r).

When asked to "make this deal work", the AI may Never adds non-surplus resources to the table. add resources to the trade table that the human

civ has only one copy of if the human civ doesn't have enough gold per turn available for trade.

If the human player is offering resources to the AI, then the AI offers to buy them with gold per turn if the current human income is negative, and otherwise tries offering surplus resources in return and uses gold per turn to balance the deal. May offer non-surplus resources as a final option.

Tries to give surplus resources, then gold per turn.

Rationale

Had to adjust the counter-propose algorithm to the more flexible AI trade denial behavior (which involved refactoring the entire function).

The human income condition leaves it up to players whether they want the AI to pay in gold or in resources: Just change the gold slider for a moment. Resources are often preferable because the AI doesn't pay much gold, but gold can also be preferable. especially when the player doesn't need the resources of the AI. Players shouldn't have to optimize the deal through trial and error then.

The AI refuses to give away more than 2 nonsurplus resources of the same kind (happiness or surplus resources to their masters. Other civs health) at once, and refuses to accept more than never give away non-surplus resources. 2 resources of a kind at once.

Capitulated vassals give any number of non-

The precomputed resource values are updated after starting or canceling a trade.

No limit on resources accepted at once.

Resource values are precomputed (since the BtS) expansion) for efficiency and only updated once

		per turn.
Rationale	be careful not to buy too many resou each resource independently. I.e. the worth, and simply triples that value w	and health from resources situationally, it must broke at once because the evaluation is done for e AI knows what e.g. one more happiness is when three happiness resources are offered (but the AI can tell whether it can spare e.g. one non-
Tbd.	city network (easier said than done).	each time that the AI connects a resource to its Currently, an AI civ updates its resource values connected during the AI civ's turn aren't taken into civ.

	ng one resource for another with a AI never asks for 1 gold per turn in	Not an issue because all health and happiness resources have the same trade value.
Rationale	Adding the 1 gold to the trade table i	s tedious, and it makes the AI look petty.
AdvCiv		BtS/K-Mod
of bonus im as Cow Pas the value of yet been re	I tech evaluation to increase the value aprovements with high tile yields (such sture or Corn Farm) and to decrease if military units whose bonuses haven't vealed (such as Axeman and in; multiplier now 60%).	proportional to the yield. (BtS code) Military units requiring unrevealed bonuses are
Rationale	Since health in the early game is now (correctly) counted as unimportant, the AI tech values of Agriculture and Animal Husbandry need to be adjusted. Prior to this adjustment, the AI often went for Iron Working(!) before Animal Husbandry, even if it had a Cow next to its capital. (Actually, I suspect that this happens in K-Mod too, despite the overestimation of health, but I haven't checked. In unmodded BtS, it's fine.) K-Mod comment on the Axe and Sword evaluation (AI_techUnitValue): "We're quite optimistic mostly because otherwise we'd risk undervaluing axemen in	
	the early game! (Kludge, sorry.)" Undervaluing Axeman isn't a probler	n currently.
Tbd.	the tech value from resource yields a	underappreciated, but I feel that I shouldn't boost any further. Would have to look into the strategic at Wheel enables Chariot complicates matters.

AdvCiv		BtS

potential for	es surplus resources based on the trading them away, and (as in BtS) prporation yields.	Unless consumed by a corporation, a surplus resource is valued at 20% of the first copy. This value is sometimes so low that the AI doesn't connect surplus resources. (Perhaps also due to K-Mod changes to the Worker AI and the evaluation of the first copy; not sure if this is a problem in unmodded BtS.)
Rationale	The value of the first copy shouldn't affect the value of surplus copies; one resource for trade is as good as another. Tradeable strategic resources might be a bit more valuable than luxury and food resources, but not much; difficult to find buyers for strategics. And the AI needs to connect all its (surplus) resources; it's the correct play most of the time, and can't really hurt.	
See also	Prior to v0.92, this change was tagged with advc.121. Change 121 deals with Al Worker builds.	

037	Prevent masters from stifling their vo	oluntary vassals
Rationale	Voluntary vassals can be difficult to keep, and that's intended. There shouldn't be much that a player can do about this. The game certainly shouldn't reward dirty tricks.	
Tbd.	Voluntary vassals should treat "we'd like you to research" and "join us in preparing war" as recommendations and answer "we'll see what we can do" (as opposed tio "we'll do our best"). Should also give a noncommittal answer to "why don't you attack."	
See also	033 prevents masters from using Pr	ivateers against their vassals
AdvCiv		BtS
when trading	ssals lower their trade value to 67% gresources with their master. vassals charge the full trade value.	50%
_	issals refuse to trade resources that eed themselves.	Are willing to trade all resources.
Rationale	Don't want the master to starve the vassal's cities by buying the vassal's crucial resources.	
	Capitulated vassals aren't a concern because players have no reason to sabotage those (they're not going to break away without outside help). Probably no trade discount in BtS because the master can get resources for free through "time for your tribute"; fair enough.	
Tbd.	Perhaps put some limit on "time for	your tribute".

038	Top Civs popups

039	Reparations (payments for peace) are announced to third parties	
AdvCiv	1	BtS
When two civs make peace and one side pays reparations, then all other civs receive a list of the reparations in the peace-made message.		Third parties only learn that peace was made and, apart from capitulation, nothing about the peace conditions. Can tell though whether a city was ceded – the owner changes, but there is no "captured" message. By monitoring discovered techs and gold available for trade, it's also possible to guess whether a tech or gold was received. No other reparations are possible between AI civs.
Rationale	To make AI behavior more transparent. The peace terms are not so secret anyway (not in the real world either).	
Config	Can be disabled through ANNOUNCE_REPARATIONS in GlobalDefines_advc.xml.	
Tbd.	Would like to make all trades transparent. See Tbd. at <u>210</u> (Civ4lerts). After all, the Al already learns about trades with its worst enemy and all tech trades (for "fear you're becoming too advanced" memory).	

040	Al improvements for settling other co	ontinents
See also	300: Barbarian placement on continents without civilizations. 905a gives ships better stats (cost, speed, cargo capacity). 031 reduces the impact of distance on AI found value.	
Tbd.	Would like a Columbian Exchange n World once a copy is obtained from	nechanism that reveals resources in the Old the New World.
AdvCiv		K-Mod
When an AI civ has no city on a continent, it counts unrevealed tiles in the city radius as average tiles when computing found values (with a number of exceptions and restrictions). The Settler may change its mind once it gets to the spot and reveals its surroundings.		Unrevealed tiles don't add anything to found values. This makes the AI very reluctant to settle a continent that it has only explored from the sea.
Rationale	Could instead try to improve AI exploration. Not so easy; how can the AI tell that a continent is large enough for land exploration (without circumnavigating it first)? Should Caravels be routinely accompanied by a Scout/ Explorer?	
AdvCiv		BBAI
	es Settlers trained in inland cities to s when there are no city sites on the	Inland AI Settlers wait indefinitely for a ship. BBAI comment: "TODO: Go to a good city (like one with a transport)"

041	Can train ships in any coastal cities		
AdvCiv		BtS	
lake can tra The Al igno	ain ships and construct a Dry Dock. ores this change, i.e. builds ships/ Dry n cities at a size 20 water body	Can train ships and construct Dry Dock only in cities adjacent to a water area of at least 20 tiles. Other coastal buildings require only 10 water tiles which is also the threshold for a salt water lake.	
Rationale	can act as canals into larger water a	Since BtS, it can make sense to train naval units in small water areas because Forts can act as canals into larger water areas. Implausible that this should not be allowed. Since the AI doesn't have a notion of canals, it needs to stick to the old rules though.	
	This change also eliminates the confusion about two different area size thresfor buildings, 20 for units). Cities are now either proper coastal cities, or only water) lake-side cities.		
	Don't want to allow shipbuilding at lakes because it's confusing to see shipbuilding options on the city screen of some inland city with a 1-tile lake. Dawn of Mankind players have also <u>argued</u> that small lakes aren't deep enough for constructing and launching oceangoing ships.		
Tbd.	By allowing Lighthouse in lake-side cities, I could remove the awkward incentive founding in tiles that are both coastal and lake-side.		
But I'd rather treat Lake tiles as being a terrain different from Coast and Oo thus unaffected by Lighthouse (and Colossus, Moai); then give Lake +1 for commerce from the start (i.e. like Oasis but 1 less commerce).		Colossus, Moai); then give Lake +1 food, -1	
See also	030 prevents coastal buildings in ice-locked cities.		

042	Currently unassigned	

043	Dan Quayle scale adjusted	
AdvCiv		BtS
of at least 1 victory is at		15 000 suffice for the best victory, the next thresholds are 14 000, 13 000, Dan Quayle is below 3000.
Rationale	Almost all my victories have been "Julius Caesar", so this is apparently too easy to reach for an experienced player. More of a logarithmic scale now, covering a wider interval of scores. It's possible that the original scale worked OK in Vanilla Civ 4; hasn't been changed in either of the expansions.	
The score formula needs work too; increase the weight of victory date and diffice the main incentive should be to win as early as possible on the highest possible difficulty. Though the bigger issue is that yields increase too much in the Industria so a lot of points can scored by drawing the game out.		as early as possible on the highest possible that yields increase too much in the Industrial era,
	Should also move the formula into the	he DLL so that R&F can access it (see comment

	in RFTotalScore::updateString).
See also	707: The Rise & Fall scores are normalized to match this new scale.

044	No auto-save after loading initial auto-save	
AdvCiv		BtS
No auto-save right after loading a savegame. There's still an auto-save after regenerating the map, which replaces the initial auto-save and deletes all other auto-saves.		When the initial auto-save is loaded, the game immediately auto-saves again, overwriting the savegame just loaded and deleting all other autosaves.
	It's unnecessary to save right after loading, and the deletion of other auto-saves is somewhat unexpected; should only happen when a new game is started (via the main menu).	

045	Hide rival buildings		
AdvCiv		BtS	
and that he (small and obuildings th change (Lig models on t	ere the player doesn't have a unit /she can't investigate, only wonders great), defensive buildings and at can be inferred from their plot yield phthouse, Levee) are shown as 3D the main interface. Whether a city is f war (still) doesn't matter.	All buildings are shown in all revealed cities.	
Rationale	Too much information. If a player has all cities of a rival revealed, he/she could chevery turn whether a building was completed, and infer that units or wonders are being produced when no (ordinary) building gets completed for some time. With detailed knowledge about the AI code, it might also be possible to deduce the AI strategies and war plans. No one does this, but the game still shouldn't reward it.		
	The change could improve performance, but probably just reduces the main memory usage, which isn't an issue in AdvCiv.		
And it makes the important buildings (wonders, Walls, Castles		s (wonders, Walls, Castles) easier to spot.	
	Would be more realistic to show the buildings whenever a city is visible (i.e. not fogged), but hiding them seems better for gameplay; I think showing them only when a unit is inside is a good compromise.		
Credits	From Rise of Mankind, though they don't check if the city could be investigated or if there's a unit, and don't show Lighthouse and Levee. Link to source code (1 MB file): Sourceforge.net		
Tbd.	Fog of war should apply to the shown buildings, i.e. only those buildings sho shown that were present when the city was last visible. Doesn't seem that has implement. Since only a handful of buildings are ever shown in the fog of wa additional memory usage should be negligible.		
		s. Now that the player doesn't learn about most generate too many messages. See also Tbd.

See also	Somewhat dependent on 135c, which refactors CvGameTextMgr::setPlotHelp.	

048	Changes to combat odds text	
AdvCiv	1	K-Mod
attacker, the combat odds help text shows which of the selected units is about to attack. Under the breakdown of combat modifiers, the defending unit is shown. (The units are shown as a one-line short description with promotion icons.)		When more than one unit is selected, the next attacking unit is chosen for the human player by the AI. Which unit is chosen can only be inferred from the strength value and odds breakdown. In BtS, the same goes for the defending unit. K-Mod indicates the defending unit through the 3D model shown on the map, but, on the attacker's tile, 3D models of multiple units are shown when multiple units are selected.
No separate		If either of the two combatants is damaged, the current hitpoints are shown after the combat odds.
defending unit are shown by default. ACO is still		By default, ACO shows the defending unit as a one-line short description with promotions. The attacking unit is not shown by default.
Tbd.	When a stack attacks, the map should show only the 3D model of the unit that is about to attack. It's easy enough to set the "center unit" of the attackers' tile accordingly in CvGameTextMgr::setCombatPlotHelp, but the game ignores the center unit and shows a mix of 3D models instead. Not sure if and how this can be changed. In any case, the one-line descriptions are still going to be helpful: can't tell from the 3D model which promotions a unit has.	
Rationale	The UI needs to make clear which units are about to fight. ACO already had an for this, but I don't want to use ACO because I find it too bulky.	
	Hitpoints: The one-line descriptions already include the current strength and the to strength, which is how the UI usually represents hitpoints.	
	It took me a moment to understand what the ACO settings "always", "never", "norma and "alternate" do. The idea is, apparently, to let users configure two sets of settings a "normal" one and an "alternate" one for further details or some special purpose. Th "swap views" checkbox enables the alternate settings. I've set the info about attackir unit to "always" (the defending unit was already set to "always").	
048b	Replaced a few uses of the word "re	treat" with "withdraw" in help text.
Rationale	Game terms should be used consistently. Plus I may want to use the term "retreat" in the context of a <u>combat round limit</u> in the future.	

	The AI doesn't build roads in human territory. (But may upgrade human roads to railroads.)
Rationale	If the human pillages those roads, the AI keeps rebuilding them, which can

	permanently occupy several AI Workers. Also, ultimately, humans should be in control over the roads in their territory.
Tbd.	Implemented through a new pathfinder flag. I'm not sure that I'm using that flag in all the right places; should take another look some time to make sure I'm not preventing pathfinder instances from being reused, which could hurt performance.

050	Earth scenario		
	rld scenario is not part of AdvCiv yet, but I've already made some changes in AdvCiv date that scenario:		
140 reduces despite their	300 prevents large deserts from filling up with Lions. 140 reduces the effects of various world-size modifiers. Earth scenarios tend to be crammed despite their great size, so the BtS modifiers don't work well. 171 lets the AI pick religions in chronological order ("Choose Religions" option) when no favorite is available.		
And all the c	And all the changes with id 05-something.		
Designer's notes: In a scenario, when holding down ALT while hovering over a tile with a resource, the game displays a short text that explains why the resource was placed there if the scenario comes with a game text file containing such designer's notes. See Civ4GameText_Earth18Civs.xml for an example.			
Disabled wh	Disabled when in Debug mode (because ALT key has a different function then).		
Tbd.	I'm not sure if I'm ever going to use this – would have to be done for most resource locations (if not all) to make sense.		

051	Initial game state in scenarios	
AdvCiv		BtS
In scenarios, civs receive free tech from the game difficulty in addition to any free techs defined by the scenario.		Only free units are received based on the game difficulty (but only if the scenario doesn't define any free cities or units; no change).
Rationale	Don't want the game difficulty to have a smaller impact in scenarios like Earth18Civs than in regular games. Also, the absence of free Archers leads to problems with very early Al-on-Al wars in crowded scenarios.	
See also	104u fixes issues with AI initialization in scenarios. 126 grants free tech from game difficulty when starting in a later era.	

See also

ALT key shows combat odds instead of plot help when hovering over a unit. <u>004</u> disables this when the unit is owned by the player – one can't attack one's own units.

052	Adjustments to AI found behavior for scenarios	
See also	Several of the changes under <u>031</u> were made with scenarios in mind, but also have a significant effect on randomized maps.	
AdvCiv		K-Mod
When the AI chooses its city sites, found values are randomly increased or decreased by up to 1.5%, and when deciding which site to settle next choices, e.g. research, scouting, city production		

randomly inc (These rande turn to turn, l	AI), the respective found values are creased or decreased by up to 4%. om adjustments do not change from but stay the same for each tile for the Only applies to scenarios.	and Worker builds, can affect AI found behavior, but the placement of the first couple of cities is often perfectly predictable.
		arios. Not much randomness in the site selection a locally optimal position into one that is Al look bad.
	The AI considers training a Settler in a size-2 capital when that capital is slow to grow. The AI normally lets its capital grow to size 3 before training a Settler. Exception: When the capital isn't growing at all or has no decent unworked tiles left.	
	Capitals with low food but high produsuch captials don't really occur.)	uction shouldn't wait for size 3. (On random maps,

053	No Tundra Farms	
Tbd.	Want to allow Farms only on Grassland, Plains and Floodplains. Not implemented yet, but I'm letting the AI already treat Tundra river tiles with caution. When the change is made, Tundra river without Forest should also be counted as a "bad" tile.	
AdvCiv	BtS	
,		Tundra river tiles are treated the same as other river tiles; quite a bit of utility is added for the river.
Rationale	Earth scenarios have large taiga areas along rivers, and these areas are not supposed to be deforested and farmed. Taiga soils are very badly suited for agriculture (and actual tundra soils are even worse). On randomized maps, this shouldn't make a big difference as they generate few Tundra rivers. Settling the far north can still be worthwhile when there are bonus resources.	

054	Options on the Custom Scenario screen	
See also	250b: Advanced Start and SPaH	
AdvCiv	AdvCiv BtS	
shown on the Custom Scenario screen, but not equivalent to "Always Peace" unless a scen		The option is visible on both screens, but it's equivalent to "Always Peace" unless a scenario sets certain civs to be at war from the beginning.
Rationale	The option is confusing and superfluous in non-scenario games.	
Config	Set to invisible in Civ4GameOptionInfos.xml. Can be toggled to make the option visible on the Custom Game screen too (as in BtS). The AdvCiv DLL makes the option visible on the Custom Scenario screen regardless of the XML setting.	
Tbd.	Would be nicer to add a field to Civ4GameOptionInfos.xml that determines whether an option shows up on Custom Scenario.	

055-059	Still unassigned
---------	------------------

060	Add-to-spaceship not shown after part completed	
AdvCiv		BtS
After completing a Spaceship (SS) part, the player is only taken to the SS screen if the SS is ready to launch.		Except in networked multiplayer, the player is taken to the SS screen after every completed SS part. The SS screen was added in BtS.

099	Culture isn't removed when a civ is destroyed		
See also	Could merge <u>dlph.24</u> fully in order to stop colonial vassals from using the slot of a dead civ (which, I suppose, resets the culture of the dead civ).		
AdvCiv		BtS	
	is eliminated, its culture remains in and keeps causing anger.	When a civ is eliminated, its culture disappears as well.	
The AI play "defeated".		An announcement says the <i>civ</i> was "destroyed".	
	re and after conquest is explained as being ruled by a foreign culture".	Before elimination, anger from culture is explained as "We yearn to join our motherland".	
	% of the foreign population with	No anger after elimination (the motherland is gone).	
Barbarian), 150% times 40% = 60% without OB (or if they're conquered), and 200% times 40% =			
Rationale	Removes one strong incentive for conquering a civ entirely. The goal is to make a vassal agreement the correct choice most of the time – less micro-management that way. Also intended to weaken military strategies.		
	It's also glaringly implausible that a culture would instantly disappear.		
	No AI changes: conquering cities is still very desirable, and the AI doesn't consider anger from culture anyway when deciding whether to accept a capitulation.		
Config	The anger can be tweaked through XML (GlobalDefines_advc), but can't re-enable cultural elimination. This is because BtS doesn't actually set culture to 0 in one place, but checks for elimination in numerous places and treats culture as 0 when appropriate, so making it optional is messy.		
Credits	Contributions by Chronis, Ifgr and vincentz CFC thread		
See also	Chapter about "Immortal Culture"		
	130w adds a diplo penalty for cities v	with high foreign culture.	
099b	Tile culture decays		

Each round, the culture value of each player (civs Tile culture doesn't decay. (But it's treated as 0 and Barbarians) in each tile is decreased by 1%. when a civ is eliminated.)

When a tile is within the city radius of at least one civ, the tile culture of civs that don't have the tile within a city radius decays faster: if the tile is within the outer ring of any city radius, 2 percentage points are added to the decay rate, and 4 percentage points if it's within the inner ring of any city radius. Exception: civs with less culture in the tile than the city owner with the highest culture don't suffer from expedited decay.

(This change does not affect city culture.)

Rationale

Should lead to fewer unworkable tiles (see also the rationale for <u>035</u>) and fewer issues with stranded AI stacks (see also rationale for <u>034</u>). Higher decay rates would accomplish more, but I don't want tiles to flip too easily around conquered cities. That said, in BtS, it's too difficult to culture-flip tiles in the radius of a conquered city, especially in Renaissance or later; tiles have tens of thousands of culture points by then. It generally takes too long for city culture rate to translate into relative tile culture in BtS.

Another way of looking at the decay rates: If a tile receives culture at a constant rate, tile culture can't exceed that rate times the (multiplicative) inverse of the decay rate, e.g. 100 if the decay rate is 1%.

Why not simply tweak the culture spread formula so that tiles near cities receive more culture? The player only sees the culture percentages, so, visually, it doesn't make a difference. I don't want to increase culture on tiles that are near multiple cities of the same civ lest that "two cities would almost always be able to culture press a solo city" (from the K-Mod readme file). The main goal is to allow civs to work tiles in their (exclusive) city radii. That's also why I'm exempting civs with less tile culture than the city owner. It's fine if another civ has 45% tile culture so long as the 55% civ is able to work the tile. The exemption also makes it easier to implement this change without a performance penalty.

Config

TILE_CULTURE_DECAY_PER_MILL and CITY_RADIUS_DECAY in GlobalDefines advc.xml

See also

035 (disabled): City owns all tiles that no other city could work
It turns out that "RoM: A New Dawn" also has a culture decay mechanism
(SourceForge link to revision), but theirs is only triggered every 50 turns and then halves tile culture. For performance reasons I suppose; but I've managed to make the computing time negligibly short in my implementation after some tweaking.

Cities in occupation spread no tile culture.

Cities in occupation produce 0 city culture, but the present city culture generates tile culture as normal.

Rationale

This should give civs that allow their cities to revolt a harder time.

No increased decay in city tiles, nor in tiles owned by Barbarians.

Rationale

Don't care if Barbarians are able to work tiles. Rather give those tiles to civs with strong culture.

Culture in city tiles doesn't affect which tiles are workable. The increased decay would make revolts and anger from foreign culture easier to handle, which isn't what I want. The exception for city tiles can lead to higher culture percentages of the city owner in tiles surrounding the city than in the city tile. This is a bit odd, but not a real problem I

	hope.	
099с	Cities revolt regardless of culture ran	ge
See also	210b adds an alert about positive rev	rolt probabilities
Any city with sufficiently strong foreign culture can revolt, but the revolt can only flip the city if the owner of the foreign culture is alive and has a city nearby. (And can't flip if flipping is disabled in game options.)		
Made some adjustments to AI willingness to accept capitulation vs. trying to capture further cities.		
Rationale	To remove another incentive for elimiculture more relevant.	nating civs, to make conquests more costly and
Resurrecting a prior owner seems needlessly messy; the probabilistic occutimes (change <u>023</u>) should make revolts from dead culture painful enough. Barbarian civ would be easy, but strange, I think, because the city would thunits based on the Barbarian tech level.		olts from dead culture painful enough. Joining the nge, I think, because the city would then train
	Not sure if cities with high living foreign culture but outside of foreign culture range should be allowed to flip. Let's say the rebels only dare joining the homeland if the homeland is near enough to protect them.	
Config	Can (largely) restore BtS behavior the GlobalDefines_advc.xml.	rough revolts_ignore_culture_range in
Barbarian culture can cause cities to revolt. They can't flip to Barbarian control though, and Barbarian culture strength is only counted half in		practically never enough culture range to cause
Surrounding		Culture in tiles adjacent to the city always contributes to the foreign culture strength, and, ultimately, the revolt chance.
Cities can't flip from a master to its vassal; only go into occupation. Increased strength of foreign culture in cities of capitulated vassals.		Can flip between vassal and master. No way then for the master to get the city back.
Rationale Not sure about this. Seems more flavorful/ historical to let conquered Barbarian revolt. Might play better without these revolts; players don't expect them, and conquering Barbarians should be easier than conquering civs. Then again, Bardon't generate much culture, so it doesn't take much effort to suppress them, at not when the surrounding tiles don't count. Could say that only counting the city models the (political) disunity of the Barbarians.		e revolts; players don't expect them, and sier than conquering civs. Then again, Barbarians esn't take much effort to suppress them, at least count. Could say that only counting the city tile
	ould easily implement flipping to Barbarian control. Historically, that hasn't really appened; see the list of colonial uprisings <u>here</u> (Wikipedia). More accurately modeled s a period of unrest.	
	Flipping from master to vassal could incentivize elimination over capitulation. Also find it ultimately more annoying than challenging.	
Config	BARBS_REVOLT Switch in GlobalDefines_advc.xml	
See also	025 reduces culture spread from capitulated vassals	
religions if	chance is increased on account of city o whom the revolt culture belongs is	Only a) increases the revolt chance, and also applies to capitulated vassals. Dead culture can't cause revolts.

alive, not a capitulated vassal of the city owner, has a state religion and that religion in present in the city; or

b) if the city owner has a state religion, and that religion is not present in the city but some other religion is.

No change: The revolt chance is decreased (which may cancel out the above) if the city owner has a state religion, and that religion is present in the city.

The revolt chance is also decreased (but only half as much) if the city owner has no state religion.

All city owner is slightly inclined to switch to the religion of the foreign population.

When there is a non-state religion in the city, then an oppressive state religion (which is not present in the city) is no worse than no state religion.

Rationale

almost removed this complicated stuff entirely, but it's kind of nice that spreading one's state religion can help flip a city. The BtS rule doesn't work for dead culture, so I felt that some replacement was needed to balance out the decreased revolt chance from owner's state religion. The BtS rule also doesn't work well for capitulated vassals of the city owner: The owner can just tell the vassal to switch to a different religion; not an interesting decision, and players that aren't aware of the religion/revolt rules get confused or screwed.

Halved the religion-based modifiers (see above).

Rationale

Spreading one's state religion had made a huge difference previously, going from doubled to halved foreign culture strength, i.e. a factor of 4.

Config

STATE RELIGION MODIFIER parameters in GlobalDefines advc.

If a city can't flip on the third revolt (because the No extra penalty if flipping isn't possible; cultural owner is dead or flipping disabled in options), it loses one population instead (and goes into occupation).

occupation periods just keep getting longer.

Rationale

To discourage players from ignoring revolt probabilities (the lost turns don't become punishing until numerous revolts have taken place). And it would be strange if cities could just keep revolting. The loss of population reduces the revolt probability so that the city should eventually end up depopulated but pacified.

0 revolt chance in the first 10 turns (adjusted to game speed) after a city was founded in the Ancient era.

No such period of grace, but since cities can't be founded within the culture range of a foreign city, revolt chance is always 0 in newly founded cities.

Rationale

Now often an issue in the early game when founding anywhere near a foreign border. Probability tends to decrease quickly as the new city starts spreading tile culture, but can get unlucky with revolts until then. Don't want that randomness, don't want to punish settling near foreign borders (player can't even tell that there is foreign culture; not shown on unowned tiles), and don't want to scare players with an initially high revolt probability.

Extra AI defenders in cities that might revolt.

No code for this at all. The AI tends to put units in border cities though, against external threats.

Rationale

Since revolts no longer occur only in border cities, the AI had to be adjusted.

099d	Can't spread religions during civil disorder.	
AdvCiv		BtS
Missionaries and Executives can't spread religions/ corporations in cities that are in disorder (from occupation, anarchy or a random event).		Can spread regardless of disorder, but there isn't much of a point because happiness and culture from religion have no effect during disorder, and revolt chance is 0.
Rationale	Now that the occupation duration is linked to the revolt probability, spreading a religion right after conquering a city could reduce the (expected) occupation time. Don't want players to micromanage missionaries to spread religions right after conquest. Also seems realistic that religious communities (or corporate branches) can't be	
	established during disorder.	
Tbd.	Would be better to show the Spread Religion button grayed out with explanatory text. Currently, the button isn't shown when a city is in unrest.	

099e	Al for promotions that reduce revolt chance	
AdvCiv		Warlords
promotions and when moving units.		A promotion with revolt protection is chosen based on whether the cultural owner of the current tile differs from the actual owner.
		When moving units, revolt protection is ignored.
		Revolt protection from promotions was added in Warlords, but remained unused. K-Mod gave the Leadership promotion 50% revolt protection.
Rationale	Too much work to do this properly (see <i>Tbd.</i> below). What Warlords does is worse than nothing.	
Tbd.	The promotion should be selected based on the revolt chance in a nearby city, the number of units already stationed there and the revolt protection percentage. When there is a city with a high revolt chance, a unit with revolt protection should be given a defensive Unit AI type and stationed in that city.	

100	Changes to sponsored wars

Config	REVOLT_TOTAL_CULTURE_MODIFIER	in GlobalDefines_advc.
AdvCiv		BtS
city tile cultu have a near owner of a c and the only but also not		Only tile culture of nearby civs matters. The 10% in the example would lead to a high revolt probability because it's much more than the owner's 1%.
Rationale	Don't want to reward civs for just 10% (or so) culture, especially not uninvolved parties in wars. Also implausible that the 10% would find sufficient support for a revolt.	
See also	A somewhat common issue because of <u>099</u> (culture of dead civs sticks around).	
far higher th tile culture is		Revolt strength is increased by up to 100% if owner's tile culture is small, but high owner's culture can't reduce the base strength from population and surrounding tiles.
a couple of	revolts easy to suppress with one or units when the owner's tile culture is foreign tile culture.	Cities with up to 49% tile culture of the owner can still have a high revolt chance.
Rationale	1	sily flip at nearly 50-50 tile culture. The change ulture, even if the owner hasn't (yet) reached
(Actually, flip	after conquest enabled by default. pped the option to "No city flipping est" and kept it disabled by default.)	The option is called "City flipping after conquest" and disabled by default.
Rationale	Part of my efforts to weaken military strategies. I want to build on the revolt mechanism, so it should be (fully) enabled by default.	
(Armored and the DLL. Since v0.94 Cannon, Art	Siege except Machine Gun) to 50% through	E.g. Catapult has CGS 4, same as Axeman; Tank 12, same as Marine. Machine Gun 9, same as Rifleman.

Rationale	More flavorful, hopefully also more intuitive. One would assume Catapults to be less suitable for quelling revolts than Axemen or other infantry. It's asymmetrical warfare. This explanation also fits with early units having relatively high CGS.			
	Important that Machine Guns are exempt because the AI uses these as standard city defenders.			
		nples of tanks being effective at supressing revolts tive. Better to leave the CGS value unchanged		
Config	Civ4UnitInfos.xml			
Tbd.	Consider giving Spy a positive CGS, possibly also recon units. Espionage should somehow help against revolts. ("Spread Culture" does in K-Mod, but needs to happen before conquering the city, which requires some foresight.)			
	hen a city flips while at war, the garrison is mped. Only Barbarian garrisons are killed. The garrison is killed. Bumping only happens when flipping at peace-time.			
Rationale	Killing a stack of units is pretty outlandish. Bumping Barbarians would be unusual, and killing them is less problematic wrt. game balance. I guess they just lay down their arms.			
Credits	The issue had been pointed out (and	d narrowed down) by DarkLunaPhantom <u>here</u> .		
	umber of prior revolts to the elp text, and whether the city will flip revolt.	Help text only shows the revolt probability.		
All civs that I revolt.	know a city are notified about a	Only the actual owner and the cultural owner are notified.		
	ability (if > 0) shown on the main part of the plot help text.	Need to enter city screen to see revolt probability; no way to see revolt probability of a foreign city.		
Tbd.	In addition to the revolt alert (change <u>210b</u>), the main interface should indicate who city has a positive revolt chance (change <u>002f</u> makes room for another indicator). extra column on the Inland Advisor screen would be nice to have.			
	May have to disable the notifications again if they turn out to happen too frequently (given change 099c) in large games.			
	Revolt probability in visible foreign cities shouldn't be secret – all factors are public knowledge.			

population of the city. If the city has ever had a higher population than currently, then, over the course of 75 turns (slightly longer or shorter on speed settings other than Normal), a gradually higher population is assumed, up to a maximum of the highest population ever.

Revolt probability is initially based on the current Always based on the highest-ever population of the city.

Culture in the eight adjacent tiles factors into foreign culture strength; the effect increases over and can increase culture strength significantly. time (same mechanism as above for population). Culture points in those tiles don't count directly. After 50 turns (on Normal speed), culture strength is further increased when adjacent tiles are *owned* by the foreign civ.

Ownership of the adjacent tiles always counts,

While there is hurry anger ("cruel oppression"), foreign culture strength is increased as if the city had 5 population more and the resulting foreign culture strength is increased by 50%. The Al doesn't use Slavery in cities that already have a positive revolt chance.

Rationale	I think the BtS rules are supposed to make cities flip faster once the adjacent tiles have flipped. Loss of tiles will often lead to population loss, which would normally reduce culture strength.	
	I agree that cities enveloped by foreign culture should flip quickly, but I don't want conquered cities to be untenable, and I don't want players to feel compelled to continue their wars in order to push back foreign borders. My rules are supposed to give the conqueror time to build up some culture.	
	That's all overly complicated (already in BtS), but hopefully players don't need to kn the details.	
	Slavery would be an easy way to get around anger from foreign culture, and to keep the population small, making the city easier to pacify.	
See also	If <u>035</u> is enabled, it's <i>cultural</i> ownership (highest tile culture that matters for the revolt chance after 50 turns. 912d allows Slavery to be disabled.	
Barbarian ci	ties flip on the second revolt. Flip on the first revolt.	
Rationale	Given the increased revolt proabilities in K-Mod and AdvCiv and the removal of the range restriction for revolts (099c), a single Barbarian revolt happens (way) too quickly. A holy city conquered by Barbarians in the early game would flip back in something like 10 turns.	

102	Show fewer foreign moves	
AdvCiv		BtS

		Both disabled by default.
moves" enabled by default.		
much of an	eanging the default doesn't have effect because player options are ivilizationIV.ini unless it's a ation.	
Rationale	Now that the biggest problems with these options are fixed, players should use them. Better than having to inspect the map after every round of AI turns to find out which units have moved.	
Config	Civ4PlayerOptions.xml	
See also	108d shows a loading screen hint re	commending the show-moves options
an invisible start plot and unit moving	ve starts in a visible plot and ends in plot, the camera is centered on the d the player gets to see/ glimpse the out of sight. Units that begin and end the turn in	Only moves ending in visible plots are shown. In the case of a multi-tile move ending in an invisible tile, not even the visible portion of the move is shown.
	s, i.e. move only through a visible tile.	
Rationale	Would make sense to show units passing through, but difficult to implement; can't catch the unit as it moves. What's easy to do is show the empty traversed tile, but that's confusing, and it doesn't make sense that the player learns about the tile, but not the unit that moved. Better not to show those moves at all.	
Tbd.	Often the unit moving out of sight is already gone when the camera jumps there. Not sure if this can be helped.	
AI avoids pa		Al constantly patrols within its borders, especially with fast units like Knights.
	nits tend to move in a consistent eads to wider patterns.	Patrol movement is memoryless; narrow patters.
Rationale	point. After all, borders grant visibility scale surprise attacks (can't be sure	ndly moves" unusable, and there isn't much of a y. I guess patrols add some uncertainty to smallhow many units exactly are going to be near a against nukes. Well, anti-nuke AI behavior needs ay.
Tbd.	I didn't disable inner-border patrols entirely because, in order to patrol unowned land, AI units may have to traverse owned land. Moving in one direction for a longer time also helps with that. That said, patrols in unowned land don't seem crucial either. Against Barbarians, the guard-city-site AI routine is probably more effective.	
	If there's too much or too little patrolling, I may have to find a cleaner solution.	
Executives vare no longe moves" option ships, move are always shoves of other controls.	on-hostile Workers, Missionaries and within their owners' cultural borders er shown when the "show friendly on is enabled. As for non-hostile is of human ships and cargo ships shown (except AI ships on patrol), ther ships only when moving into sight or inside the borders of the layer.	All unit moves are shown.

Rationale	These land moves are practically never interesting. Even if Worker stealing weren't disabled (change 010), I doubt that seeing rival Worker moves would help. For ships, it's a bit trickier because a passing Caravel could matter (target for Privateer, or could be carrying a Spy), but mustn't show patrolling Destroyers. Cargo units that can carry city attackers need to be shown in any case.	
		s on patrol, I'm giving away some info about the cargo ship is practically always a patrol, and bying to watch.
Config	SHOW_FRIENDLY_WORKER_MOVES and SHOW_FRIENDLY_SEA_MOVES in GlobalDefines_advc	
Tbd.	Could be an issue for enemy moves as well when there is city visibility from espionage. So, should perhaps apply the change to enemy moves too.	
Related: Fixed a bug that caused AI non-combat units to oscillate between safe cities when at war. See change 001. (Also fixed in K-Mod 1.45, now using the K-Mod fix.)		
"show friendly moves" can be toggled using Shift + M. If the option is toggled this way, the change won't be- visible in the Options menu, and won't be saved upon- leaving the game. (Disabled through a switch in GlobalDefines_advc.xml. Turned out I had never used this.)		
No moves a	re shown when in Globe View.	The camera jumps around, but the moving units aren't visible in Globe View.

103	Spy unit can investigate cities		
AdvCiv		BtS	Vanilla/Warlords
A player can investigate a rival city if that player has a Spy unit in that city, and that unit hasn't moved this turn. (Can still investigate cities through passively accumulated espionage points as well.)		accumulating espionage points. That said, the "Sabotage Building" and "Sabotage Production" missions (and the cost of these	A local spy unit allows city investigation regardless of whether it has moved. City religion can also grant visibility. No visibility from espionage points.
Great Spy c	an also investigate.	Not even Great Spy can investigate.	No Great Spy unit.
	To make Spies more useful for players that don't invest heavily in espionage. Also, constructing wonders is more fun when one can find out who else is in the race. Players don't spend thousands of espionage points just to find out if someone is currently building a wonder.		
	the Spy mustn't have	n was a bit too easy in Vanilla/WL; I'r e moved, which should make quite a n eye on all of them. Moreover, BtS in	difference when hopping from

cost if investigation is too easy now.
120d: Mission cost for Sabotage Production no longer shown on the Espionage screen. It had previously been possible to guess based on that cost whether a city was close to completing a wonder.

104	UWAI: See chapter <u>Utility-Based Wa</u>	<u>r Al</u>	
	,	eated classes. I've added a few auxiliary functions documentation only inline. There are also some e marked with the following sub-ids.	
	Since the skeleton of the code was written before I thought of the name "UWAI", the identifiers in the code are prefixed with "wpai" or "WarAndPeace(AI)".		
See also	210a: UWAI changes that make the	war trades alert less noisy.	
Config	1 2 2 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	" on the Custom Game screen, UWAI can be XML; see instructions under <u>Known Issues</u> .	
	UWAI settings in AI_Variables_Glo	balDefines.xml.	
104b	Code for measuring path lengths bet cities by generating paths for garrisoned units	ween cities. (A hack that measured distances between s was removed in v0.94.)	
104c	Al avoids military victory strategies in	order to spare friends	
AdvCiv/ UV	VAI	BBAI/ K-Mod	
considers v conquest) v	n weighing its victory strategies, the AI iders whether a military victory (esp. uest) will require an attack on a friend. If so, I will pursue different strategies instead.		
may ultimat	I comes close to a military victory, it tely attack friends, depending on the cumstances.	Once stage 4 out of 4 of a military strategy is reached, the AI ignores attitude when it comes to war targets.	
Rationale	See the UWAI chapter. Victory strategies aren't within the scope of UWAI, but, in this case, the strategy weights need to be aligned with the DoW policy.		
Config	Only effective if UWAI is enabled.		
See also	115: Al commitment to victory strategies		
104d	Added a function that evaluates holy cities, shrines and corp. HQ, replacing the (overlapping) code in the targetCityVal and cityTradeVal functions.		
104e	Halved military power values of ships through the DLL.		
	Reduced military power (not combat str.) of Maceman from 9 to 8; Samurai at 9 (no change), Berserker at 9 (was 10), Jaguar at 5 (was 6). Increased power of Infantry to 22 (was 20).		
Rationale	UWAI handles naval and land power separately, so the power of ships relative to land units doesn't matter. But the K-Mod AI uses a single power rating, and, considering that ships are only useful in certain situations, ships contribute too much power. Also, even if UWAI is enabled, some strategic AI choices are based on a single power rating, and the Statistics screen shows only one rating as well.		
	build-up; appears as a better offensive	Al overestimate Maceman when predicting military ve unit than Grenadier. The bonus against melee that point of the game (whereas 7 power for	

	Crossbowman seems OK). UWAI (if enabled) increases the power values of all offensive units that can receive city raider promotions; this gives Maceman another boost.	
	The 25% bonus of Infantry vs. Gunpowder is very valuable, whereas Woodsman I shouldn't be enough to bring Jaguar to the same power as Swordsman (which has 1 more strength). Montezuma is suicidal enough without overestimating his unique unit.	
Config	Civ4UnitInfos.xml	
See also	131 also makes some changes to XML AI settings, e.g. the asset value of Infantry.	
104f	More narrow conditions for Dagger strategy	
	while in a chosen war; Dagger Having started a war doesn't affect Dagger. Itirely when UWAI is enabled.	
Rationale	Staying in the Dagger strategy while at war doesn't make much of a difference for the K-Mod AI, but it gets in the way of my UWAI testing (UWAI running in the background while K-Mod decides).	
	The purpose of the Dagger strategy seems to have shifted from BAI to BBAI to K-Mod. Here's the original description by Blake. The latest purpose was probably to build up units without having a war plan, and thus also without giving away war preparations through WHEOOHRN; then a sudden strike. UWAI solves this problem differently.	
104g	Don't demand tribute from unreachable civs (implemented based on UWAI code)	
104h	Moved the BtS and K-Mod code for negotiation of peace terms into a separate function, and made some minor functional changes too (that also take effect when UWAI is disabled).	
104i	Refusal to talk (RTT) when at war. A new AI memory type, MEMORY_DECLARED_WAR_RECENT is used for distinguishing a DoW at the request of a third party or through a defensive pact (DP) or a vote from a normal DoW.	
Config	The MemoryDecayRand value of the new memory type determines the RTT duration in wars on behalf of a third party. This value can be set through Civ4LeaderHeadInfos.xml, and a default of 22 is hardcoded in the DLL (CvLeaderHeadInfo::getMemoryDecayRand). That default value corresponds to an expected RTT duration of 22/2 = 11 turns. (Though, as in BtS, war success and Al personality can shorten the duration.) 130j is responsible for the division by 2.	
Tbd.	When the AI is already willing to talk according to the BtS rules, adding DECLARED_WAR_RECENT memory has no effect. Thus, a civ could e.g. make peace with the target of a force-war resolution right after the vote. Not sure what to do about this. For a start, the turn on which a vote takes place or a war ally is brought in should be remembered.	
just those tl	When a DP leads to a DoW, then declared-war-recent memory is added for all involved parties, no ust those that join the war through the DP. When peace is made between two civs, the civs become willing to talk to the other side's DP allies.	
Rationale	Otherwise, the target of the original attack would be free to negotiate peace, while the allies that declared war because of the DP would be forced to continue the war.	
See also	dlph.3 allows DP despite war	
Tbd.	War votes should arguably lead to a (10-turn?) period of forced war. The current code based on AI memory can't enforce war between two human civs (or just for 1 turn).	
	civs make peace, all their declared-war-recent memory is set to 0, i.e. both become lk to everyone (unless war utility is too high).	

Rationale	Refusal to talk is a matter of fairness toward a third party (sponsor, DP ally, voting members of the AP). When a war party bows out (possibly said third party itself), it's a big enough change in circumstances to disregard any commitments for continuing the war.	
104j	Change in a master Al's war plans affects war plans of its vassals. The unit stacks decide where to invade first. Active even if UWAI is disabled, meaning that BBAI's CvTeamAI::AI_isOkayVassalTarget function ("Block AI from declaring war on a distant vassal if it shares an area with the master") no longer works.	
Rationale	With K-Mod's AI changes, I doubt that isOkayVassalTarget is really needed, whether UWAI is enabled or not. I'm not allowing unit stacks to anticipate wars triggered by Defensive Pacts (DP) because diplo penalties need to be taken into account, so the strategic side of the AI needs to choose the target for the declaration of war and the tactical side needs to respect that decision.	
See also	003b: It could be important for performance that CvTeam::getMasterTeam is precomputed.	
104k	Moved rounding of trade values into an auxiliary function (no functional change)	
1041	Caching of war utility to keep the user interface fully responsive when checking if a civ is willing to talk or willing to trade certain items. No functional change outside UWAI, but had to put some code to switch caching on and off into CvDLLWidgetData.cpp.	
104m	Handling of tribute demands redirected to UWAI; fewer random AI requests and faster decay of AI memory about human response to tribute demands (only if UWAI enabled).	
	Regardless of whether UWAI is enabled: AI doesn't ask for help, an embargo or (no change) tribute if it's about to declare war on the player (war preparations complete). On Noble difficulty and higher, the AI only makes tribute demands with a significant trade value; e.g. won't just ask for a food resource or some small sum of gold.	
	The AI can demand gold per turn (not possible in BtS). The demanded sum is based on the human player's commerce rate and expenses (not on the current gold income which is often negative or near 0).	
Rationale	This should also address problems with players pillaging their own roads in order to cancel a deal that results from a tribute demand for a resource. That trick doesn't always work (the resource could be next to a river or in a city tile) and requires two roads to be pillaged, which is somewhat costly in the early game. So AI resource demands can make sense; don't want to disable them entirely.	
Tbd.	Resources and gold per turn demanded in tribute should be canceled automatically after 10 turns. This is difficult to implement; see comments in CvPlayer::handleDiploEvent, Case DIPLOEVENT ACCEPT DEMAND.	
	Though perhaps CvGame::handleDiplomacySetAIComment could help.	
104n	Diplo votes	
1040	Handling of sponsored wars and conditions for vassal agreements when UWAI	
1040	enabled.	
104р	Target size for invasion stacks based on difficulty and less random (even when UWAI is disabled). Always choose a target city while war is imminent. (BtS sets no target with one chance in three.)	
Rationale	Except on high difficulty settings, the AI often took too long to get invasions started	

	after finishing preparations.
104q	Changed some K-Mod uses of WarPlanStateCounter to AtWarCounter
104r	Handling of empire split
104s	 Propagate UWAI decisions about limited, total and naval war to other parts of the AI: Treat faraway land targets as only reachable by sea. Change Area AI from Offensive or Massing to a naval assault type when UWAI thinks that the attack should be made via sea. Increase train-invader chance when preparing a total war. (K-Mod: Chance only increased once the war has started.)
104t	Handling of team changes: Permanent Alliances and elimination of a team member
104u	Fixes initialization issues with scenarios
104v	Messages about AI war preparations in all-AI games
See also	Chapter about <u>all-Al games</u>
104w	Make all the Al's cash and gold-per-turn (up to a limit based on total commerce) available for peace deals, and trust the UWAI code not to spend more than peace is worth.
See also	039 announces the conditions of peace deals to third parties. 036 and 550f make more gold available for trades other than peace deals.
104x	Loading of Al-related parameters from AI_Variables_GlobalDefines.xml

104y	No-war probability without Open Borders	
AdvCiv		BtS
Civ4LeaderHeadInfos.xml would be 100% for a civ that the AI doesn't have Open Borders with,		If the no-war probability is 100%, then the AI tends to behave non-aggressively. Depending on AI personality, Pleased or Friendly attitude is needed for 100%.
Rationale	Don't want humans to take advantage of a friendly AI neighbor by closing the borders and thus, possibly, preventing the neighbor from attacking anyone.	

104z	Handling of random events that lead to war/ peace: "Spy Discovered", "Wedding Feud", "Great Mediator", "Heroic Gesture". Random Events disabled by default.	
AdvCiv		BtS/K-Mod
		There is some BtS code for deciding if the AI wants war, and K-Mod improves that code a bit.
to a random event will anger a rival civ that the AI dislikes, the AI picks that response only if the rival is not too powerful.		The event data doesn't say that one of the responses can lead to a DoW; the AI only knows that the response is going to worsen relations.
		If a rival is powerful, the AI is all the more inclined to anger that rival. As a result the AI will, on rare occasions, get into a war with a far too powerful

Great Mediator, Heroic Gesture – Reduced the probability for peace from 50% to 33%.		rival.
Probability to	or peace from 50% to 33%.	The DLL gets no info at all about this event, so the AI has to decide based on the "AIValues" of the two possible responses. Both have the same value, so the AI ends up picking a response at 50-50 odds.
No Change		The other side can still decide to continue the war, but if that's also an AI civ, it never does (no change in AdvCiv).
		Through, what karadoc calls "an ugly hack" in the respective canTrigger functions, K-Mod prevents the event from triggering when either side refuses to talk.
Rationale	random events; the sane approach	ause there are serious issues with almost all is really to disable them. The war/ peace events n, so I'm applying some more band-aids.
	Giving the opponent an option to managoriate via the trade table. And W	ents more or less hinge on irrational AI behavior. ake peace is pointless – the two civs could just /edding Feud lets one civ pay 60 gold for a s simply asked whether it wants to declare war
	EventInfo schema so that the DLL could probably also identify them be CVRandomEventInterface.py WOU	nree events would involve adding tags to the can tell what the events actually do. (The DLL ased on EventTriggerData, but that's messy.) And Id have to call some new Python-exposed DLL ng a war (in the case of Wedding Feud) or always
	LunarMongoose's feature list) would	MongooseMod (see "Event Overhaul" in d have to be the starting point. I don't think it fixes ly through his DLL, which is closed-source).
See also	106g is responsible for recording wa	ar/peace events in replays.
"No Random	Events" enabled by default.	All options on the Custom Game screen are disabled by default.
Rationale	I feel that at this point (v0.94), the mod makes improvements in so many areas that players might expect that Random Events have also been overhauled. So I want to signal somehow that this isn't the case. Renaming the option to "Random Events" (disabled by default) would be more consistent, but players who update from v0.93 would have to toggle the option then.	
See also		onquest" to "No City Flipping after Conquest". That opment when updating was less of a concern.

105	Al relies less on getAnyWarPlanCount	
AdvCiv		BtS
Replaced most calls of getAnyWarPlanCount		
and some of getAtWarCount with a new		
function isFocusWar that ignores wars that are		

probably not	worth focusing on.	
(Other parts of the AI code already take care of		The AI assigns lower utilities (found values) to settlement spots when at war, to the point that AI civs practically don't expand while at war.
Rationale	Just being at war doesn't imply that the AI needs to build up units or switch to wartime civics. It could be that the war enemy can't even reach the AI civ, or has just one city left, is hopelessly backwards etc. In particular, don't want human players to declare meaningless wars in order to hamper the economical development of an AI civ.	
The AI makes no tribute demands when busy		The AI checks if its own military power is greater than the target's defensive power before demanding tribute. The target's defensive power accounts for ongoing wars with third parties, but only in a crude, unreliable manner.

106	Announcements and replays	
See also	004f disables celebrations See 104z about random events. Most messages about random events are irrelevant, but I don't want to fix this because I think players should just disable them. 127 records start and end of AI Auto Play in replays. 120f announces and records spy missions that cause a revolution.	
Tbd.	Would be nice to show and record messages about captured and razed wonders. I think Civ 3 had those. I've already written the code and translations (not on GitHub), but it turns out that CvPlayer::acquireCity isn't the proper place for my code because the raze-city popup isn't resolved until later. This really complicates things.	
AdvCiv	1	BtS
No message	when autosaving	Autosaving message at end of human turn
Rationale	Players who rely on autosave tend to set narrow intervals via CivilizationIV.ini, which makes the frequent messages disruptive. Autosave is known to be reliable; no need to report success.	
Config	TXT_KEY_AUTOSAVING in Civ4GameText_advc	
city owner is	Only GP births of known civs are reported. The city owner is stated if the city isn't revealed, e.g. the city is unrevealed. In the Incan Empire".	
		Entire message in yellow. Makes it harder to pick out the yellow BUG gold-trade alerts.
Rationale	Gotta kill some messages. This one is implausible (how do you learn about GPs on an undiscovered continent?), and doesn't have great strategic value.	

	nders are always reported (no e city is stated if revealed.	Message says "faraway" when the city isn't revealed. If the owner is known, it is listed on the Statistics Screen. The message never states the city, but highlights it on the map.	
No change to the way religions and corps are reported.		When a religion or corp. is founded, if the holy/ HQ city is unrevealed but the city owner known, report only "faraway".	
The name of the city where a GP is born is no longer recorded in replays. Record it as "The Great Scientist Antony van Leeuwenhoek has been born in the Russian Empire." (important infoat the start and the end)		"Antony van Leeuwenhoek (Great Scientist) has been born in St. Petersburg (Catherine)!"	
Rationale	Rationale "In the Incan Empire" is extra information. Reporting "faraway" (as in BtS) is misleading in this case. Not reporting them at all would also be bad. Should either report all GP births of a civ or none. The crucial info is how many GPs a rival civ produces, and not so much which GPs specifically.		
	Wonders: just to be consistent.		
		message a little. The city is irrelevant.	
Tbd.	Perhaps remove the GP name from in the Russian Empire".	replays, i.e. just "A Great Scientist has been born	
AdvCiv		BUG/ Civ4lerts	
No more BUG alerts about civs no longer willing to trade a resource.		The alert about resource trades triggers whenever the set of resources offered by a rival changes from one turn to the next.	
See also	210e makes the alert trigger also wh	en the AI becomes willing to import a resource.	
Rationale	It's a helpful alert, but fires too often. Typically, the willing-to-trade part is more important. The player then either trades for the resource or decides not to. In the latter case, it's not immediately helpful to know that it's no longer available.		
Tbd.	The same reasoning can be applied to the tech trade alert, though techs seem to become unavailable less frequently. Unavailable techs and resources hint at inter-Al trades and/ or changes in Al attitude. The proper solution is to implement a new alert for Al attitude changes and one for inter-Al trades. (Update: The latter has been implemented by now, 210d, but turned out to be too noisy.)		
	Will probably still need the "no longer willing" alert because the AI could also have started building a wonder.		
	Civics changes except to Free Religion excluded from the replay log.		
Replays record when a leader enters a new era. (disabled by default)		Except for Liberalism, technological progress is only recorded indirectly through civics changes	
Replays record the first discovery of each tech. and constructed wonders.			
green. Cities	ns and first discoveries are shown in s founded are shown in the owner's color. Religion changes in light blue.	Cities founded in green, religion and civics changes and random events in white.	
Cities hit by	nukes recorded.	Only announcements; not mentioned in replays.	

Rationale	Civics changes are not very important and occur very frequently; make replays difficult to follow. (Religion changes tend to be rarer and more consequential.)	
	Replays should give some indication of technological progress. Era transitions were my first idea, then I thought first-to-discover would be even better. There's some redundancy when techs cause religions to be founded, but I guess that can't be avoided.	
	Colors: Green should be the color of research. For cities founded, I've tried magenta (the color used by the disabled city-founded Civ4lert) and <code>COLOR_CULTURE_RATE</code> , but they're too hard to read against the brown background of the Replay screen. I've also tried white (now that civics changes and random events are no longer reported), but found player colors easier to follow. (Although replay messages are otherwise not color-coded based on the affected civ; so it's inconsistent.)	
Config	SHOW_FIRST_TO_DISCOVER_IN_REPLAY and SHOW_ENTERED_ERA_IN_REPLAY in GlobalDefines_advc.	
Tbd.	Perhaps recording every tech is too much and era transitions too little. Could do era transitions plus Liberalism plus first discovery of techs granting a free GP.	
	Are nuclear meltdowns announced or recorded?	
106b	Message limit	
This change	only applies when playing with the "Minimize Pop-Ups" (MPU) option.	
Rationale	It's awkward when the Event Log opens along with a popup because then the Event Log can't be closed until the popup is dealt with. This happens all the time when playing without MPU. Also, I suppose players who don't use MPU are fast players that don't pay a lot of attention to each individual message.	
Config	Override: MESSAGE_LIMIT_WITHOUT_MPU in GlobalDefines_advc.xml	
AdvCiv	BtS	

If more than 3 messages are waiting at the beginning of a turn, don't display them on the main interface; open the Event Log instead. Exception: Messages about most major events are always displayed on the main interface.

The following major events are *not* shown on the main interface when the Event Log is opened:

May started! and a library for

- · Golden Age begun
- · city founded
- · city liberated
- · foreign city flipped
- city captured/ razed
- · war declared on or by a vassal
- · peace with a vassal
- · wonder built

Also not shown, and now only a minor events: when a religion or corp spreads in a city, birth of a GP, civics changes, tech discovered.

The signing of a Permanent Alliance is now a major event.

No sound is played when war is declared by or on a non-human vassal, nor when war with a non-human vassal ends.

Also open the Event Log when there are 1 or 2 messages along with a diplo popup (unless that popup is just an Al civ making first contact with the human civ).

In Hotseat, always open the Event Log when there is a new message.

No limit on the number of messages. The Event Log is only ever shown when the player opens it.

Major events are kept in the Event Log indefinitely, whereas minor events are cleared after 20 turns and info messages after 2 turns. The following events are major:

War started/ ended, alliance formed, defensive pact signed, capitulation/ vassal agreement signed/ broken, tech discovered, first to discover Liberalism, circumnavigation, wonder/ team project built, city founded, civics or state religion changed, revolution started/ ended, Legendary culture reached, religion or corp founded, city religion/ corp spread or removed, city liberated/ flipped, game won, GW sustainability reached (K-Mod), vote source established (UN, AP), city captured/ razed, Golden Age begun/ ended, civ conquered, GP born/ GG killed, empire split, spaceship launched/ failed, nuke.

The multiple (pairwise) DoW at the start of a war involving vassals result in a single loud war-horns sound.

The Event Log button becomes inaccessible when a diplo popup opens (hotkey also blocked).

On-screen messages are cleared in between turns, including those that haven't been displayed yet. This means that a player who follows another human in the turn order misses most messages.

Rationale

The main interface really isn't suitable for displaying frequent messages. It's obtrusive; the display delays add up; messages can disappear too fast. My limit guarantees that after waiting for 3 messages, no further messages can arrive.

When a diplo popup opens, any messages on the main interface become difficult to read, so it's important to provide access to the Event Log. The player should be able to learn what happened during the AI turns before making any decisions.

Major events on the main interface: These can easily get buried and missed in the Event Log because they occur already during opponent's turns. Especially when playing without sound. The ones that I've excluded are either not that important or there is some additional mechanism that alerts the player (e.g. tech splash screen when a tech is discovered). Religions are spread all the time; that's not a major event at all.

Config

START OF TURN MESSAGE LIMIT in Global Defines advo

Tbd.

Could repair message delivery in Hotseat; opening the Event Log is only a workaround solution. Would have to store messages within the DLL when they are triggered, and call CVDLLInterfaceIBase::addMessage only at the start of the recipient's turn. Can also rewrite that function in the DLL if necessary; probably just wraps data into a CVTalkingHeadMessage object and calls showMessage.

106 d	Civ4lerts and Scoreboard default settings changed 004v also makes changes to the scoreboard.	
See also	127: Other changes to Al Auto Play	
	Listing all trades upon loading can't be considered a feature either. That info is presented better by the Foreign Advisor.	
Rationale	Arguably a bug. BeginActivePlayerTurn shouldn't fire multiple times per turn, but that's what happens whenever a savegame is loaded.	
Alerts have the same display duration as normal events: 10 seconds.		
Consequently, alerts aren't checked (and aren't displayed) when loading a savegame.		Alerts are checked after loading. Since Civ4lerts doesn't store data in savegames, the alerts assume a blank slate, and display a bunch of messages, e.g. for all technologies that anyone willing to trade.

Presumably, the were only added for consistency – most (all?) the negation of that condition (e.g. willing to wever, reducing the noise from alerts is more triggers because players may want to check the
	I'm not removing any non-"pending" triggers because players may want to check the job assignment when a new citizen is born or when an angry citizen goes back to work. I don't think this reasoning can apply to has-become-healthy, but in this case, I don't want to break the pattern.	

See also	God knows what the "Borders Pending" alert was supposed to be good for. Will remove that one when I need the space for <u>210</u> .		
AdvCiv		K-Mod	
"Happiness Pending" (i.e. about to become unhappy) enabled by default.		All Civ4lerts are disabled by default in K-Mod. (I think BUG as a standalone mod enables them all by default.)	
Rationale	"About to shrink" is often helpful to k cities.	now too, but annoying in recently conquered	
Tbd.	One reason why it pays to be alerted about cities that are about to shrink is that the AI (and thus the governor) doesn't take into account that cities can lose only 1 population per turn. Once it's decided that a city will shrink, the correct play is normally to deprioritize food for one turn. This is tedious, so the governor should do it automatically or there should be some additional penalty for a food deficit when the food store is empty.		
106e	Report all religion and corp changes		
revealed cit the religion religion, or i city. Once tl announce r	Show a message whenever a corp spreads in a revealed city. Announce religion spread only if the religion differs from the city owner's state religion, or if the player owns the city or the holy city. Once the player is in the Industrial era, announce religion spread only if the player owns the city or the holy city. Message only shown to city owner and to players that have the religion as their state religion or own the holy city (in the case of religion spread) or to players that own the HQ (corp spread).		
to the HQ o	When a corp spreads in a city that isn't revealed to the HQ owner, the city becomes revealed to the HQ owner. HQ owner may receive messages about unrevealed cities.		
HQ, and do corporation message w	Don't announce the establishment of a corporate HQ, and don't announce that the HQ spreads the corporation to the HQ city. I.e. show only one message when an HQ is founded, namely (e.g.) Alexander has completed Mining Inc. in Athens".		
Rationale	Update (v0.91): The foreign religion spread messages get too annoying in the mid-/endgame; therefore disabled post-Renaissance. Perhaps there should be a "Show foreign religion spread" Civ4lert, but that would have to be enabled by default, and then players would have to manually disable it in the midgame – if they'd even realiz that this is possible.		
	Update (v0.92): It's actually also too annoying before Renaissance. No longer announcing if the religion is already the city owner's state religion.		
Tbd.	Does a holy city generate gold from unrevealed cities?		
Config	The era threshold for foreign religion spread messages can be changed through STOP_RELIGION_SPREAD_ANNOUNCE_ERA in GlobalDefines_advc.xml.		
	The v0.92 update can be disabled by toggling ANNOUNCE_STATE_RELIGION_SPREAD in GlobalDefines_advc.xml.		
106f	Announce canceled Defensive Pact (DP)		
AdvCiv	-	BtS	
recorded in the replay log.		DP are announced and recorded when signed; only the parties involved are notified of cancelation.	

106g	No random events in replays	
Random eve	nts aren't recorded in replays.	All random events are recorded in replays.
when a decla	ays "in response to a random event" aration of war or a peace treaty was a random event.	
Rationale	Most of the random events are unimportant, and many are quite wordy, making replays difficult to follow. The war and peace events are exceptions.	
Tbd.	There are some other important eve	nts, e.g. fulfilled quests.
See also	104z improves the AI response to w	ar and peace events a little.
106h	Replay lists game settings	
	m the Settings tab (Victory screen) is first entry of a replay.	The relevant info is stored in the replay file, but not displayed anywhere. The Hall of Fame screen only shows difficulty, world size, starting era and game speed.
Rationale	For old replays and replays shared	with other players.
Config	SETTINGS_IN_REPLAYS in GlobalDe	efines_advc.xml
Tbd.	Would be nice to indicate which color is the player color, but I don't think replays support the <color> tag, and I don't want to show an entire entry in the player color.</color>	
106i	Replay file names prefixed with mod	l name
Replay file n	ames start with "[AdvCiv]".	The replay name is composed of the player name, year of the final turn and, apparently, a two-digit random number to avoid name collisions with earlier replays. The mod name is stored in the replay file, but that file has a binary format. BtS associates the .CivBeyondSwordReplay file ending with Civ4BeyondSword.exe, but this does not cause the proper mod to be loaded.
The mod name is shown on the Settings tab (Victory screen).		The mod name is shown on the main menu screen; from within a game, it's not visible.
Config	TXT_KEY_REPLAY_PREFIX_ADVC in (Civ4GameText_advc.xml
Rationale	Given a replay file, one needs to know the name of the mod in order to load it.	
	Ideally, no mod would be required to load AdvCiv replays; they don't require any particular text keys or other XML data. I've added one field to the CvReplayInfo class, but that could easily be folded into another field to restore compatibility with BtS. The problem, though, is that the EXE discards replays whose ModName string differs from the currently loaded mod. If I set that to an empty string in AdvCiv, it should load in the unmodded game, but will no longer load in AdvCiv unless I reimplement gDLL->loadReplays.	
106j	A deal canceled during an AI turn is only immediately announced if it's an open borders agreement, defensive pact or peace treaty; canceled gold and resource deals aren't announced until the start of the next human turn. Exception: If a resource deal is canceled because the trade connection was lost, the announcement is shown immediately.	
Rationale	Only important events should get an immediate announcement. Canceled resource deals are (typically) followed by either a diplo popup or a declaration of war – unless the trade network was severed.	

Pillaged imp	Pillaged improvements are immediately announced.		
Rationale	Not really important, but foreign moves are shown immediately (if the respective player option is enabled) and combat results are announced immediately, so it's more consistent this way.		
106k	City name changes in replays		
name of any the turn. If so	At the end of each turn, the game checks if the name of any city has changed since the start of the turn. If so, the name change is recorded in the replay log. City name changes are not recorded in replays. a city is renamed, future replay messages refer to the city by its new name, but older messages remain unchanged.		
Rationale	l'm recording the change at end of turn because a player who renames a city might change his/her mind once he/she sees the new name on the main interface; don't want to spam the replay log with temporary changes.		

107	Fewer AI defenders	
See also	023 can add some defenders when there is a revolt chance. 017 builds fewer military units overall when there are already a lot. 022 Changes the computation of AI paranoia, which also affects garrison sizes.	
AdvCiv		BtS
	e now assigned like under the	Floating defenders in defensive wars are assigned as under Alert2.
offensive (offensive Area AI), even when a war is recent, the AI relies on its war success rating t		selecting its stance (offensive or defensive Area
Al personality (LimitedWarPowerRatio) slightly factors into the choice between defensive and offensive Area Al.		
Rationale	Need to counterattack more. Shouldn't rely much on war success even in long-ish wars; successes from an initial surprise attack can give a false impression (see also 130r under <i>Tbd.</i>). Unless the power ratio is highly unfavorable, just sitting there isn't the most effective tactic, and it's also boring to play against.	
		f character for some leaders, and very much in er personality factor. Use LimitedWarPowerRationave limited objectives.

	enders when their number exceeds a	Turtling AI civs keep building defenders until they can make peace or the power ratio shifts in their favor.
Rationale	A turtling civ can't recover economically from building Archers for 50 turns.	
AdvCiv		BtS

Al doesn't try to guard non-city tiles when a war starts looking hopeless.		Nothing to prevent guarding of resources or Forts. Not sure if an urgent need for defenders elsewhere can cause the AI to stop guarding non-city tiles.
Rationale		d actually be crucial to keep them, but I don't think gets beaten badly. It's normally more useful to
Reduced implements of the contract of the cont	pact of Space victory stage 3 on city	Extra defenders in capital and all cities building spaceship parts.
Rationale	Space victory is a lengthy process, a Doesn't usually mean that the AI jus	and stage 3 begins with the completion of Apollo. t needs to survive in order to win.
between two	computes the (spacial) closeness civs, cities on different continents ed to be less close to each other.	Cities on different continents are considered to be closer to each other than those on the same continent.
		Closeness mostly affects the distribution of Al defenders, the Alert strategy, raze decisions and the price of sponsored war.
Rationale	Arguably an oversight by S. Johnson (or whoever wrote the PlayerCloseness code). The intention was probably to use a wider search range for cities on other continents, not to treat them as being nearer.	
See also	In some situations, the impact of a land connection is further increased: 022: Alert strategy 1040: WHEOOHRN when already fighting a war (currently disabled)	
	defenders on the highest three ings, fewer on low difficulty.	Difficulty affects how many units the AI manages to train (in particular through the AITTRAINPERCENT modifier), but the target defender counts are the same for all difficulty settings.
Rationale	There's very little war in BtS on the low difficulty settings because the AI only manages to build enough units for defense. It's good that the low-difficulty AI is less aggressive, but it can't be entirely passive. Fewer defenders also make it easier for human players to wage war.	
	Conversely, the high-level AI trains s defenders.	so many units that it can afford some more
	s units that temporarily guard a city in certain situations.	Only units with the approriate (permanent) Unit Al type are counted.
Rationale	I'm not sure how often this comes up, but I think the change can't hurt.	
Credits	Merged from "RoM: A New Dawn" (Afforess). SourceForge revision: link	

108	Starting plot normalization and assignment	
See also	027 is concerned with the selection of starting plots. 129 makes starts with multiple Gold or Gem resources or numerous flood plains much less likely.	
AdvCiv	BtS	

When placing extra bonus resources Tries to make the lowest found value at least 80% (placeExtras) in a singleplayer game, the of the best. game tries to make the worst starting plot at least 70% as good as the best (in terms of found value). No change for multiplayer. Ensures that all land plots around starting plots Transforms most, but not all, bad terrain are decent plots. (Tundra), bad features (Jungle) and mountain peaks around starting plots. Ice is always cleared. In multiplayer games, all peaks are cleared, too, and almost all bad terrain and features. A freshwater source is still quaranteed (no change). The player handicap makes the human starting plot match the desired difficulty; e.g. Rationale Settler puts the human civ into one of the best available starting plots, and Deity in one of the worst. Therefore, equal starting conditions aren't crucial in singleplayer. More unequal starts probably make games on Prince upward more challenging, which don't mind. Low-difficulty games hopefully get a bit more dynamic in terms of warfare due to some AI civs having (much) worse starts than others. Removing all bad plots makes the starting region look unnatural. A few bad plots give a start more character and provide more variety. Reduced normalization also leads to weaker starting plots overall, which should reduce the importance of capitals a bit. Very powerful capitals reward early warfare too much, and make wars generally too much about taking the capital. Config Several parameters in GlobalDefines advc.xml; can restore BtS normalization too. Selecting "Balanced" in the Custom Game screen only affects the map generation before normalization: it does not enable BtS normalization. I wish it did, but once the map has been generated, there is no way to tell if the Balanced option was set. The city cross around the starting plot is No plots are revealed other than those that the revealed when the game starts. starting units can see. Rationale Makes it more attractive to move the starting Settler. Don't want players to settle blindly and hope for the best (or regen) when a starting plot looks poor. When all citycross tiles are revealed upfront, and hidden resources are unlikely (see below), there isn't much to hope for. Can accept the starting plot for what it is or go find a better one. Config START SIGHT RANGE **in** GlobalDefines advc In singleplayer games, initially hidden resources As far as I can tell, vields from all hidden are disregarded when choosing starting plots. resources are fully factored into the found value Hidden resources are no more likely to occur when choosing starting plots. Only their strategic around the starting plot than anywhere else. value is discounted. A poor starting plot can hint

cross.

at a hidden resource in the surrounding city

(Less likely, in a way, because Horse, Copper

and Iron can't be on riverside.)

Rationale

It can't be rationalized historically that a poor starting plot hints at hidden resources.

It seems that BtS and K-Mod don't even take into account in which era a resource is going to be revealed, i.e. Coal would be valued about as highly as Copper. This needed to be fixed one way or another.

The flip side is that AdvCiv can theoretically produce very strong starting plots because addExtras is unaware of hidden resources. That's something to keep an eye

The AI moves its starting Settler if it sees a better The AI always founds its first city on turn 0 spot on turn 0 after moving its exploration units (if without moving the Settler.

any). Most of the time, the AI still founds its first city on turn 0 (possibly after moving the Settler just 1 tile), and it practically always has a city at the end of turn 1.

I've made a few adjustments in the found-value its capital.

In particular, a low-ish value is assumed for unexplored tiles.

This change does not apply to scenarios; Al always settles in place as in BtS.

There is special code in AI foundValue for function to help the AI evaluate potential sites for selecting starting locations, but that's not really AI code. E.g. it evaluates also tiles beyond the city radius.

> Unexplored tiles are normally treated as having 0 value.

Rationale

The starting plot finder doesn't ensure that the starting plot is locally optimal, and moving the Settler is sometimes, perhaps in one out of 10 or 20 games, very advantageous. (More often, moving the Settler is only slightly better than settling in place.)

Credits

Merged from the Better BUG AI mod, mostly by copying the code by Fuyu and Afforess. I've made a few adaptations and added some special clauses to the found value function because neither the tile evaluation for starting tiles nor the normal evaluation was quite right for this AI decision.

Exploration units that civs receive at game start are placed on a different tile than the starting Settlers, Workers and defensive units. If more than one exploration unit is received (AI on Immortal and Deity), each one is placed separately.

Since the starting Warrior that humans receive counts as an exploration unit, nothing changes for human civs under typical game settings. If a human civ receives free defensive units or Workers (low difficulty settings or later-era start). then there is a slight change: Those units are placed on separate tiles in BtS; now they're placed together with the Settler(s).

All units that an Al civ receives at game start are placed in the same tile. For humans, only the Settlers are placed in the same tile; every non-Settler unit is placed alone on a separate tile. The UnitAI type (City Defense, Explore, Worker) of the non-Settlers doesn't matter.

Rationale

My guess is that the separate starting tiles for human units were implemented in order to nudge beginning players away from immediately fortifying the starting Warrior in the first city. The separate placement also reveals a few more tiles and thus makes it easier to move the starting Settler; I like that (though it may not have been the original goal) and, now the AI knows how to move its starting Settler, I want the additional visibility also for the AI.

And of course it's always nice to make the rules for human and AI civs more alike.

	e than 3 seafood; more than 2	More than 3 coastal food ruled out, and more than 3 ocean food ruled out, but both taken together practically unlimited (up to 6).
Rationale	Cities with more than 2 seafood grow unrealistically fast; doesn't play well either. This happens too often.	
Tbd.	1	changes, I intend to reduce the food yield of Pig Should make starts with overabundant food less
108b	Assignment of starting plots

location if the	e, humans receive the median e total number of civs is odd; one ne median if the total number of civs	On Noble, humans always get locations that are slightly better than the median (40% rank), i.e. they get an advantage over the AI civs. (In as much as the game can't accurately determine whether one starting location is better than another.)
Rationale	Noble should only favor human or AI when there is an important reason to do so. And I like giving humans rather bad starts on the higher difficulty settings; it's a more organic handicap than e.g. free tech (see also chapter SPAH about this).	
See also	250d slightly reduces some AI advantages from the difficulty setting.	
Config	Through Civ4HandicapInfos.xml; though I've also changed the way these values are handled by the DLL a bit (see below).	
	hen the human players receive the	Human players only ever receive the second worst starting plot.
Rationale		lidn't trust their starting plot heuristic and worried urts. This shouldn't be an issue with K-Mod
	am games, human starting plots are sed on difficulty setting.	In team games (no change), a round-robin algorithm is used to assign each team starting plots of a similar total value; afterwards, plots may be swapped around to bring members of the same team closer together geographically. In non-team singleplayer (no change), human starting plots are assigned based on difficulty. In non-team multiplayer, humans receive the best starting plots.
Rationale	I see no reason not to use Starting	gLocPercent in multiplayer.
See also	<u>135c</u> : other multiplayer changes	
Tbd.	Difficulty should also matter in team games.	

assigning sta plots through	arting plots, the DLL reassigns those is swaps based on team membership (see above).	The DLL will select new starting plots (based team membership and difficulty) and ignore the plots selected by the map script. I think the script could implement FindStartingPlot and leave AssignStartingPlots entirely to the DLL. The PerfectMongoose (PM) script doesn't do this though.
Rationale	This seemed like the easiest way to let PM use the standard reassignment algorithm.	
See also	Chapter about PM	

109	Al improvements for isolated starts	
AdvCiv		K-Mod
Al civs that haven't met any rival by the second era focus more on Science, and less on the flavor values set in Civ4LeaderHeadInfos.xml until they meet a rival.		Optics is prioritized when isolated, but not Science in general.
Isolated AI civs are reluctant to pursue a culture victory. Adopt the "Economy Focus" strategy when alone, or when no threatening civ is known.		Al civs that haven't met anyone adopt Economy Focus; I don't think that strategy is reliably adopted when there are Friendly or faraway neighbors. Economy Focus (a BBAI-introduced strategy) reduces the production of military units.
Rationale	All naval technologies have a Science flavor, and faster research will reach Optics faster.	
See also	130n delays penalties from different religion. 130p decouples enemy trade penalties from the has-met counter. Both should make it easier to find partners abroad.	

110	Changes to AI military build-up	
See also	104s increases military build-up when preparing for a "total" war.	
AdvCiv		K-Mod
Increased the target commerce surplus for research in the early eras of the game. E.g. 65% in Classical, 45% in renaissance. (If the target isn't met, the AI is reluctant to build more units.) The AI can still build a lot of early units on high difficulty settings because of AI discounts on all upkeep costs, and because the target surplus can be lowered further when at war or preparing for war.		35% regardless of era.
Rationale A low research slider position is especially worrisome in the first third of the game.		
Al production weight lowered. Was 270% of the commerce weight (except when in financial trouble).		
Al food weight lowered to match the reduced Al use of Slavery (change <u>121</u>).		

Rationale	Still high, but that's OK – the AI is better at growing cities than at choosing sensible tech or city production. Would make sense to increase the production weight when Slavery is used less, but 270% was way too high, and resulted in post-Chemistry Workshop spam (without supporting civics). Huge outdated AI armies don't exactly make the game enjoyable either.
	In the late game, it doesn't normally make sense to grow cities further. I'm still giving food a fairly high weight because the AI should only avoid growth, not actually shrink cities (leave that to human players who know what they're doing).

111	Units in neutral tiles prevent pillaging	of routes
AdvCiv		BtS
		No special restrictions for pillaging unowned tiles. Can, in particular, pillage routes in order to slow down another civ's units.
	Not an important change. Yanking out roads from under other civs' stacks is pretty bizarre, and occasionally exploitable.	

112	Al changes for voluntary vassal agreements (VVA; "peace vassalage")	
Tbd.	The VVA code was already messy in K-Mod, and it's worse now. Should be rewritten based on a utility value that replaces the dozens of exclusive clauses.	
See also	037: Rule changes to prevent maste	ers from sabotaging voluntary vassals.
AdvCiv		K-Mod
Al lowers its VVA attitude threshold (Friendly or Pleased for most leaders) only when feeling powerless (as in BtS) <i>and</i> acutely threatened, particularly when in a losing war against a third party.		Al lowers its attitude threshold when it is among those civs with the least military power.
-		Defensive Pacts don't matter for VVA decisions. Once a VVA is signed, Defensive Pacts of the vassal get canceled.
No leader is willing to sign a VVA when Cautious and not threatened. Leaders that have their threshold set to Cautious in XML are instead a bit more willing to lower their threshold when threatened.		E.g. Frederick signs a VVA at Cautious.
	VVA happen too quickly in K-Mod, probably also owing to increased military budgets. The idea that civs without prospects for winning the game should become vassals asap comes from Warlords though. Perhaps they're supposed to catch up under the protection of their master, and then break free again, but it doesn't usually work this way. The AI should certainly prefer independent survival over becoming a vassal and helping another civ win.	
	133 cancels tribute deals once vassalage ends. 143 adds recently-canceled memory for vassal agreement.	
AdvCiv		BtS

"Grown-too-		Al leaders refuse to sign VVAs when the would-be master gets close to a military victory: "You've grown too powerful for us."
Rationale	Just prolongs the inevitable.	
agreements prospective its power ra	s too far away" rules out vassal only until the Industrial era. If the master is in the Industrial era or later ting is decreased when not sharing a th the vassal, but a vassal agreemen

territory of tl tiles large. T tiles left whe	ne vassal is treated as at least 10	A capitulated vassal with, say, 12 tiles initially gets to break free after losing 6 tiles (from war or culture pressure). Voluntary vassals don't care if they lose tiles.
Rationale	Through change <u>143</u> (cancelation of little territory left can end up changin	voluntary vassal agreements), vassals with very ghands a lot.
Civs that are at stage 3 or 4 of any victory strategy refuse to sign vassal agreements, and break free if they can: "We'd rather win the game." The leader of AP or UN also refuses/ breaks free.		Civs that are close to domination victory refuse to become vassals (such civs will normally also be way too powerful to accept, so this is pretty pointless). In K-Mod, civs refuse to accept vassals that are at stage 3 or 4 of Culture or Space victory ("Surely, you must be joking"); may also cancel the agreement. Diplomacy victory not covered.
Rationale		ile hiding behind a master who can't cancel the master. Important to let the vassal refuse (not the e human.
See also	e also 115 prevents civs with too little production capacity from pursuing a Space victory, which is important for this change: Technologically advanced civs might otherwise refuse to ever capitulate once they have the Apollo Project. 143b prevents vassals from having nukes. 014 prevents capitulated vassals from pursuing victory strategies.	
An independent colony can break free if its power Only attitude can cause an independent col is at least 80% of its master's power. break away. And since the +10 "granted us independence" bonus doesn't decay, this happens practically never.		break away. And since the +10 "granted us independence" bonus doesn't decay, this
Rationale	A War of Independence should at lea	ast be a possibility.
See also	130r causes "granted us independence" memory to decay.	

An AI civ ready to become a vassal contacts the prospective master only with a per-turn probability. The probability is based on the scoreboard rank of the master – between 1 in 20 only a 1 in 80 chance of implementing a if the master is ranked in the middle of the scoreboard, and 1 in 40 if the master is at the top. Increased by 400% if at war with anyone.

The same contact-delay is used for vassal agreements as for permanent alliances, but this only affects offers to human players. There is permanent alliance, but no such probability for voluntary vassal agreements; they're checked each turn and are directly implemented.

Rationale

It's possible that the Warlords developers had meant to use the permanent alliance probability also for vassal agreements and misplaced a closing curly brace. Be that as it may, civs are too quick to sign vassal agreements when their power ratio takes a dip, which doesn't only happen in defensive wars, but also when an Al focuses on its economy (AI strategies Economy Focus or Get Better Units) or after an unsuccessful aggressive war.

The change only affects AI-AI vassal agreements. Could also implement it in a way that makes civs more reluctant to become vassals of human civs, but that's a bit more work, and I think it's still difficult enough for humans to obtain AI vassals because humans can't generally afford large enough armies to impress the AI.

Probability based on rank should reduce snowball effects.

When a vassal is more advanced than its master, The master may gift techs to the vassal, but not the vassal may decide to gift tech to the master vice versa. from time to time. This is contigent on a sufficiently high relations value (Cautious when capitulated, otherwise Pleased).

Rationale

The master should gradually catch up with a technologically more advanced vassal. Normally this happens through tech trading, but sometimes the vassal is too far ahead. Not (historically) plausible that it takes a civ forever to absorb the tech of its vassal. From the vassal's point of view, one can argue that a voluntary vassal is - to an extent – invested in its master's success. A capitulated vassal prefers to break free. but this is always a long shot and, if relations have thawed, helping the master win is still better than a rival victory.

See also

130v makes vassals always Friendly toward their master – this does not apply when deciding whether to gift tech.

In this demo game of mine with an earlier version of AdvCiv, Tokugawa managed to make Willem capitulate in the midgame despite being some 10 techs behind: the two remained unable to trade tech for much of the rest of the game because it took Tokugawa too long to catch up.

130z deals with tech gifted between non-vassal rivals.

AdvCiv BBAI (<u>v0.83</u>) Disabled BBAI's human-as-vassal option. This option had allowed human players to offer themselves as vassals to an AI master. The option was disabled by default (through XML). K-Mod enabled the option, but K-Mod AI changes CvTeamAI::AI surrenderTrade Seem to have broken it. At least in K-Mod 1.45. I can't bring any Al civ to accept a human vassal, and the explanations (denial text) don't make much sense. Looks like too much work to make this work. Also, it's rarely smart to accept a human Rationale vassal – it's not going to send military assistance and will work hard on breaking free.

136

	Rise & Fall and Debug mode allow human players to take control of a vassal. This still works; I've only disabled the option of becoming a vassal through diplomacy.	
0	Can re-enable it through BBAI_Game_Options_GlobalDefines.xml, but I don't think the AI is ever going to accept.	

112b	Al changes to surrender decision	
See also	123d blocks an exploit where cities gifted to a war ally can lead to faster capitulation.	
AdvCiv		K-Mod
numerous er	nemy units in its territory on an	Enemy positions matter for peace treaties, but surrender is only a matter of power and war success.
	to surrender If 30% or more of the ion are on a landmass with few	
Response is dead hands"		That response isn't used anymore at all. BtS used it for cities that the AI didn't want to trade.
Rationale	Let the enemy demonstrate that the capitulating.	y can reach our important cities before
Don't surrend the master's	der while there are units en route to territory.	This is checked before signing peace treaties, but not when considering surrender.
•		The worst enemy's power is treated as 25% lower regardless of attitude.
Rationale	Should perhaps disable this power adjustment entirely. It makes some sense flavorwise, but makes capitulation easier to achieve when the winning side already has a much larger army when the war starts; otherwise, it'll take time to get the uppe hand, and "This war spoils our relationship" will typically lead to a Furious attitude. From a human pov, it's annoying if the AI won't capitulate when a war has already become tiresome.	
Tbd.	Attitude could play a bigger role whe	en there is more than one powerful war enemy.
When considering capitulation, the power modifier based on war success is applied to the vassal's power, meaning that war success matters not just for the vassal-master power ratio, but when comparing the vassal's power with the average power of other civs. The master's power is modified based war success, and therefore only matters when comparing the vassal's power with that of the master.		
	A civ refuses to capitulate unless its power rating The threshold is 80%. s at most 76% of the global average power rating.	
reduced a bi	The impact of war success on capitulation is educed a bit overall. Can reduce the vassal's power by at most 45%.	
Rationale	Perhaps the average power shouldn when the master's war success is hi	't matter at all for capitulation. Now matters less gh.

113	Al builds more Workers			
AdvCiv		BtS		
number of needed Workers is reached.		Workers prioritized only when there are far too few of them; otherwise, any decent building takes		
		precedence.		
Rationale	The BtS/K-Mod AI tends to train 1 Worker per city, which is about right for an experienced human player, but the AI is far worse than such a player at scheduling its Workers, so 1/city isn't enough. If Workers are everywhere, scheduling is much less of an issue. Also note that the AI generally isn't good at choosing city production. Can't go too wrong with a Worker (unless there are evidently too many already).			
	Should be about 1.5/city now. (Also cities so it varies a lot.)	Should be about 1.5/city now. (Also a matter of traits, leader personality, coastal cities so it varies a lot.)		
Config	WORKER-RESERVE_PERCENT in Globa	lDefines_advc		
Tbd.	Should take into account currently researched tech (e.g. Calendar, Railroad).			
Fuyu has tried to get the AI to build more Workers as well. His co- sophisticated than mine. Should perhaps merge the parts in his co- marked with "Build more Workers" (also "Worker Counting"?).		haps merge the parts in his CvCityAI.cpp		
See also	117: Al chopping; 121: Forts			
Al cities receive more Workers for local jobs.		A rather large portion of Workers gets assigned to no city and builds "territory" roads.		
Rationale	Territory roads aren't that useful; rather improve tiles around a city before they're actually worked. Once a citizen is assigned to an unimproved tile, the AI will send a Worker, but it may take some 10 turns until the tile is actually improved. Better to do it ahead of time.			
		· · · · · · · · · · · · · · · · · · ·		
Rationale	Given the number of Workers that the AI trains now, it doesn't seem to benefit much from having super fast Workers on Immortal and Deity after the Ancient era. Double Worker speed mostly means that the AI quickly improves and routes every tile it can, which looks ugly and rather unintelligent. One approach would be to factor the speed bonus into the target number of AI Workers, i.e. have the AI train fewer Workers on Immortal and Deity. But I don't like this bonus anyway; it makes the AI get ahead too fast in the early game, and might provide an extra incentive for attacking AI Workers.

114	Changes to AI attack courage	
114a	Breaking sea blockades	
AdvCiv	В	BAI

ships. Will at	ttack at near-0 odds if the defenders	Al keeps building e.g. Triremes, but never dares to attack even a single Privateer. (Not sure if it would attack with Caravels.)
Rationale	Known issue in BBAI, not fixed by K-Mod. I've also posted about this on <u>CFC</u> , but the code I posted there is now outdated; doesn't fully solve the problem.	
Tbd.		uilding primitive ships, and wait for better tech. code for breaking blockades – why should the be inadequate for this?
114b	Attacks on valuable units at poor ode	ds
AdvCiv		K-Mod/ Lead From Behind
Changed the attack courage computation so that AI leaders and the Barbarians calculate with the cost of the involved units is given less weight optimistically increased attack odds. Based on when the odds are one-sided. these inflated odds, K-Mod does a kind of expected value computation: attacking a Tank with a Warrior at 5% odds is wise because the Tank is much more expensive than the Warrior. (Of course, the true odds are much lower.)		
Rationale	Warrior against Tank doesn't matter much, but K-Mod Barbarians are also too happy to attack advanced units in fortified positions.	
See also	Koshling has addressed this by making the attack odds increase multiplicative; see this revision of "RoM: A New Dawn".	
114c	Increased AI willingness to skip bom	bardment of city defenses a little bit
Config	Through AI_Variables_GlobalDef	ines
Rationale	Haven't looked into it in detail, but had a situation when the AI should've definitely attacked instead of bombarding.	
114d	Decreased random portion of attack	courage
The random summand added to AI attack courage is between 0 and 12 for AI civs and between 0 and 27 for Barbarians. Increased the base attack odds change of Barbarians by 2. AI units have a bias toward attacking based of leader personality. The bias is composed of a deterministic base value between 0 (e.g. Asol Barbarians) and 6 (Ragnar and Napoleon) and portion chosen at random once per turn betw 0 and 32 for the Barbarians and between 0 and 16 for all civ leaders.		
Rationale	If the AI attacks completely rationally, defensive tactics won't really work anymore; but I think making the AI a bit more rational won't hurt.	
Config	Partly through the DLL, partly throug	h Civ4LeaderHeadInfos.xml.

115	Al less willing to commit to victory strategies	
See also	112: AI civs less willing to become vassals. 018: AI uses Crush strategy less. 019 makes the AI a bit less inclined to use military strategies in Aggressive AI mode.	
AdvCiv	K-Mod	

In a game with 7 civs, the AI enters stage 3 (of The thresholds are 50% for stage 3 and 80% for 4) of the Domination victory strategy when stage 4, and don't depend on the number of civs. meeting 55% of the (land and population) However, the requirements themselves do requirements. More generally, the target depend on the number of civs (e.g. 64% with 7 percentage for stage 3 is 62 minus the number civs, 51% with 16). of civs, and 87 minus the number of civs for Victory strategies with stages 1 to 4 were stage 4. introduced by BBAI. At stage 4, victory is imminent. The K-Mod AI goes for military victories too often (or early) for my taste. The BBAI Rationale approach of letting the AI play more rationally is fine, but let's not turn it into a wannabe HoF player. 50% means 24% of the world population and 32% of the land, i.e. about a "double share" in a standard game: 2 in 7 is 28.5%. This shouldn't quite be enough to trigger domination 3. 55% means that 35% of the land is needed for stage 3. That's right between 3 in 7 (42.8%) and 2 in 7. I'm factoring in the number of civs because it is easier to conquer more land when that land is divided among several weak opponents than when it is owned by a few powerful ones. Added a condition that makes the AI less willing No such condition. to go for Conquest victory if there are many rivals on other continents. The half-rivals-defeated condition is checked for Escalated the conditions so that the conquest stage is essentially one less than in BBAI/K-Mod. stage 4 (which becomes stage 3 in AdvCiv), but Added requirements for stage 4: half of the initial there are also alternative conditions for that rivals, rounded down, need to be defeated. stage. Rationale As above: military victories are too commonly pursued. Also: It's problematic when an Al civ goes for a military victory before naval invasions become feasible, because it's too difficult for players on other continents to interfere in time. Made the conditions for culture victory strategies more narrow. Rationale Culture-loving Als can be unpleasant to play against (culture pressure, wonder grabbing), so the AI should only go for it when there is a realistic chance of success. (Only relevant if UWAI is disabled.) When in multiple wars at once, the AI ignores its AI in Conquest 4 or Domination 4 never ends a military victory stage and applies the normal chosen war so long as war successes are decision process to any war that is no longer favorable. recent. I.e. multiple wars are still possible, but the AI won't just refuse to talk.

Rationale

It's OK that an AI close to a military victory likes to fight wars, but it doesn't have to insist on fighting everyone at once.

Conquest 4 only when owning at least half of the world's cities.

Rationale Even when militarily superior, conquering so many cities is going to take time.

Space victory not pursued if total production clearly insufficient.

Once Apollo Project is built, stage 3 can be reached just through technological progress.

Rationale	To discourage small civs, say, with just three cities, from pursuing a space victory. If they want to have a chance, they'll need to expand instead.	
	very large total production rate in the a bit more advanced technological	e end game, Space victory is considered even if y.
Rationale	Mostly to allow civs that are pursuing they run into a stalemate with anothe	g a military victory to switch to Space victory if er very powerful civ.
115b	Stages for Diplo victory revised	
AdvCiv		BBAI
of the own te and randomr	y on the current (voting) population eam, vassals and friends. Personality ness still factor in; game options Diplo victory disabled).	Based on leader personality, randomness and, a little bit, on Aggressive AI and Always Peace game options.
Stages 3 and victory stage	d 4 can be run regardless of other s.	Stages 3 and 4 are impossible if already in stage 3 or 4 of another victory condition.
AI prioritizes	food a bit at stage 4 (grow votes).	
Rationale	This part of the victory-stage code hadn't been revised by karadoc and it didn't do anything intelligent. Checking for peaceful game options isn't good: Diplo victories a usually half conquest, half diplomacy.	
		e for the AI. I've made the changes mostly for estimating voting populations for <u>UWAI</u> .
		avoidance. (NB: Building evaluation also affects AI tech paths, i.e. the AI is able to aim at Mass Media – if
Tbd.	Doesn't look reliable; at best, it'll no longer build the UN when it's <i>obviously</i> a terrible blunder.	
See also	178 is supposed to improve CityAI d	ecisions about the AP.
AdvCiv		BtS
When near a religious victory, the AI is more inclined to pursue the "Missionary" strategy, and its vassals switch out of Theocracy.		"Missionary" is a BtS strategy that is adopted based on AI flavor and the number of civs with Open Borders and whether they've already converted. Victory doesn't play a role.
		The AI makes no effort to deal with Theocracy.
Rationale	Should at least allow the AI to win an AP victory when all human players are already members of the AP. Will otherwise have to use Holy Wars to bring down the humans.	
Tbd.	AP victory conditions need to be overhauled. It's silly that a single converted city makes all the difference in war and victory votes.	
gets the cha	The AI proposes the victory resolution when it gets the chance and a team member is at Diplo victory stage 4. AI chooses uniformly at random from all the resolutions that it supports.	
Voting AI abstains if it likes two candidates equally.		Votes for the candidate with the lowest internal id; normally humans have lower ids than AI civs.
Tbd.	The AI still proposes random resolutions in all other cases, and this is often agonizing to watch.	
	1	

115c	Victory strategies in zero-sum games	
Al doesn't pursue Diplo victory when there's just one other team left; Al does pursue Conquest if there is just one other team to begin with.		Diplo2 possible with just one rival, but UN and AP require at least two other teams. Conquest1 requires at least one civ to be a vassal or eliminated; doesn't work if there are only two teams at game start.
Rationale	Both only really relevant for games a	
115d	Show human victory stage in debug	mode
Debug mode	e has no bearing on victory stages.	The victory stage of human civs is computed as if they were AI civs when in debug mode.
(No change.)		Also, human civs can never be at stage 1 or 2 of a victory strategy, only 0, 3 or 4.
Rationale	Since R&F, UWAI and other parts of the AdvCiv AI code use victory stage in order to determine whether a (rival) civ is getting close to a victory condition, it's important to see the human victory stage the same way that the AI sees it.	
	Stage 1 and 2 are probably too unreliable and might lead to peculiar decisions for governors of human cities. I'm guessing that's why BBAI restricts human victory stages. Fair enough; the AI only needs to know when a human is close to victory and 2 don't (need to) make a difference.	
Tbd.	The AI_calculateVictoryStage functions aren't ideal for determining how close a civ is to victory. The main purpose of these functions is to determine whether and how much the AI should focus on a particular victory condition; therefore, e.g. AI flavor values factor in. Would be better to write separate code for measuring the progress toward victory.	

116	Changes to raze decisions	
See also	250b moves the No City Razing option to the bottom of the Custom Game screen. 122 makes the AI raze cities in awful sites. 300 deals with razing by Barbarians. cdtw.1: razing by vassals.	
Tbd.	Try to use code from the <u>UWAI</u> evaluation of conquered cities and from CvPlayer::AI_cityTradeVal.	
AdvCiv		K-Mod 1.44
If the AI raze value plus a random number between 0 and 5 is above 0, the city is razed. 0 to 5 is very little; it's hardly random at all.		Raze value is used as the probability of razing a city, i.e. even if the value is just 1, the city might be razed (with probability 1%).
The Al leader's RazeCityProb adds at most 15 to the raze value. Settled Great People count as 5 against razing.		RazeCityProb adds up to 75 ro raze value. Settled GP count as 2 against.
Impact of distance and finances lowered; impact Citie of distance adjusted to map size.		Cities past a distance threshold are usually razed.
		Cities conquered in a very early rush are usually razed because of the distance.
When no other city on the continent is owned by K-Mod hathe conquering AI civ or when the city is very far the war plant.		l

r9700		(Some improvements in K-Mod 1.45, but my changes are more comprehensive.)
Rationale	K-Mod razes too much and too randomly, and this is among the most common complaints about K-Mod. Leader personality has far too much impact: Genghis Khan has 75 RazeCityProb while some leaders have 0. A city would have to have e.g. 15 settled GP to make up for that difference (assuming each GP counts as 5; in K-Mod it's actually only 2), or 5 active wonders (each counts as 15).	
AdvCiv		BtS
		Tile culture is ignored. The AI incurs diplo penalties by razing cities with cultural majority of a third party.
Rationale	The Diplo penalty is usually not worth costly. (The AI knows how to do that	n it. Can give the city away if it becomes too too.)
AdvCiv		BBAI
When an AI civ conquers a city that, if reconquered, may soon lead to a Culture victory of the previous owner, the conquering civ razes the city if reconquest seems plausible (based on power ratios and nearby units).		The dangerous city is razed in any case.
Rationale	The BBAI comment actually said to r check was there.	aze unless we "overpower" them, but no power

117	Al chops more Forests	
AdvCiv		K-Mod
. •		Only chops while building something urgent, or a building in a small city. Then assigns a priority P that is proportional to the chopping yield.
situations w	ically, assigns a priority of 0.5 * P in here the K-Mod AI is unwilling to .5 * P otherwise.	
	pportunities are taken into account.	Chopping seems to happen only opportunistically, i.e. when a Worker is assigned to a city in order to build improvements, it may (afterwards) be instructed to chop if there happen to be Forests.
Rationale	reducing or delaying chopping yields	chopping, but I don't think this can work without s further (beyond what patch 1.61 did). As it on early chopping yields. See also this discussion
	In particular, there are few reasons not to cut down Forests along rivers and on hills. With Replaceable Parts, a hill Lumbermill yields only one more commerce than a Mine, and, in part due to change 902, a river Lumbermill can't compete with Watermill. As a result of my changes, AI Lumbermills on hills/ at rivers don't seem to occur anymore at all. The other Forests remain largely intact.	

Tbd.	Chopping along rivers is historically sound, but on hills not so much. Perhaps I'll allow Mines to coexist with Forest (though some areas were deforested for producing charcoal for smelting ores).		
	The AI should arguably chop even more. I intend to nerf chopping instead, probably by restricting the yield to apply only to buildings and ships.		
See also	113 also includes chopping opportunities in the estimated Worker tasks.		
Al chops Fo Restrictions:	rests outside of city radii. :	The AI never chops Forests on tiles that no city can work on.	
 Only wher 	n there is nothing else to do.		
	automated and chopping is d in options.		
 Not if there warming. 	e is already anger from global		
	ure cities, distance and the correct chop aren't considered.		
Rationale	My conditions are simplistic and rather conservative. At least the AI now fells unworked Forests within its own borders at some point.		
Tbd.	The code seems to say that the AI always builds a route before chopping a Fores haven't verified this, and I'm not sure if it's reasonable.		
	Considering to set 0 yield from chopping outside the BFC; then this change will be obsolete.		
See also	119 prohibits chopping on unowned tiles, i.e. the AI doesn't have to worry about those tiles.		
	012 gives Forest and Jungle a defensive bonus that only the tile owner benefits from. Therefore this change in K-Mod 1.45, which makes the AI more inclined to chop Forests in the inner city ring, has no effect unless change 012 is disabled. (I've still merged that K-Mod change.)		

118	Al changes regarding peacekeeping votes		
AdvCiv		K-Mod	
· ·		Al only seeks peace if it likes the losing side or dislikes the winning side.	
"Like" means that the attitude is strictly greater than DeclareWarThemRefuse-AttitudeThreshold.		"Like" means attitude greater than or equal to DeclareWarThemRefuseAttitudeThreshold.	
Rationale A minor thing that vexed me in one game. The AI should stop inconclusive wars between its partners.			
	The second part is probably a bug in K-Mod. A comment says, "if [we] like them enough to not declare war on them", and this isn't what the code does.		
See also	UWAI (<u>104n</u>) partly handles peace v	ote decisions, but 118 still applies.	

Can't chop Forest, Jungle outside borders	
---	--

Worker builds that remove features can only be built in plots owned by the Worker's team.		Features can be removed from unowned plots and even from plots owned by a war enemy.
Rationale	problem lies with Workers working for free, but large-scale deforestation without nearby human settlement is strange in itself. Moreover, the AI doesn't chop outside of its borders, and it's easier to change the rules than to change the AI.	
	Part of an overall effort to reduce and delay deforestation (without inhibiting the AI).	
See also	117: Al chopping on owned tiles that aren't workable.	

120	Usability and AI improvements for espionage	
See also	132 makes the AI use the force-religion mission less (also changes the mission cost).	
Rationale	Espionage in BtS is beyond redemption. Focus on the few parts that somewhat work, and try to make the rest easier to ignore.	
AdvCiv	K-Mod	
Default esp	oionage weight set to 0.	1 in K-Mod (since v1.30), was 0 in BtS.
Rationale	Important in the (frequent) situation where a player sets some espionage weights before meeting all rivals. When meeting another rival, a default weight of 0 means that no points are assigned to that rival until the player readjusts the weights in the espionage screen. 1 could mean that a few points are assigned or a lot, depending on the weights set previously.	
	ried (50%) about war opponents g up in espionage.	
Not likelier to train Spies when fighting a war, only during war preparations.		War plans increase the odds for training a Spy as if running the Espionage Economy strategy.
Rationale	It's better to focus commerce on research or entertainment when at war, and production on military units. Espionage is for cold-war situations.	
	That said, when war is declared, relations take a dive and the enemy may quickly order some malicious Spy missions. It's good to prepare for that, and some extra Spies for lowering city defenses could also be helpful (although the AI rarely manage to use that mission).	
120b	Al Spies less malicious	
Tbd.	Higher AI diplo penalty for malicious missions, and no diplo penalty for failed missions. E.g. 2/3 chance of a diplo penalty (and spy identity revealed) for successful malicious missions, 1/3(4?) for successful non-malicious missions. Espionage screen should then indicate which missions are considered to be malicious.	
See also	130v makes Spies less likely to attack capitulated vassals.	
Cautious or no-war thre malicious a malicious a Aggressive	alicious" espionage only when r Annoyed, depending on the leader's shold. (If no war at Pleased, then at Annoyed; if no war at Friendly, then at Cautious.) Al has no impact on Al malice.	Attitude threshold not leader-specific. With Aggressive AI, malicious unless Friendly, otherwise malicious unless at least Pleased.

against a civ	v that is close to victory; no change.)	
Rationale	them quite well). I like them for flavor	eneficial for the AI (although the K-Mod AI uses , but, flavor-wise, malicious espionage only essive AI still has an indirect effect because war AI leads to more AI war plans.
sabotaged building while a city is in disorder.		Cities in disorder are only exempt from sabotaged building K-Mod comment: "disorder messes up the evaluation of production and of building value"
Rationale	Cities in disorder won't lose food.	
	cited when city defenders are d by a factor of 8:1 or worse.	The K-Mod code only make sure that the defenders aren't too powerful. Will even use the revolt mission against undefended cities. (Whereas BBAI had a clause – disabled in K-Mod – that blocked the revolt mission when the attackers were more than twice as powerful as the defenders.)
Rationale	2:1 as in BBAI would be too strict. Ju inciting a revolt doesn't mean that a r	st because a city can be conquered without evolt isn't worthwhile.
The Espionage Economy strategy greatly reduces AI espionage weights against civs from whom no techs could be stolen.		K-Mod added this strategy; comment in AI_Defines.h: "run high espionage slider to steal techs at a discount." When hoping to steal a tech from a particular civ,
	chance malicious missions further pionage Economy.	the weights of other civs are halved. Espionage Economy already decreases the chance of malicious missions.
Rationale	Espionage Economy tends leads to a much higher espionage output than normal. Even 10% of that can amount to a lot of wasted commerce if it's spent on frivolous missions.	
120c	Hide the espionage slider when it's at 0	
AdvCiv	1	BtS
Espionage slider not shown on the main interface Once Writing is discovered, the Espionage when it's at 0. Added the slider to the Espionage is shown on the main interface, city screen screen.		is shown on the main interface, city screen and
Rationale	More room on the main interface. Ma	ny players hardly ever touch the espionage slider.
Config	Optional through the "General" tab of the BUG menu.	

120d	Info on Espionage screen revised	
AdvCiv		BtS
·		Says "Cost"; same as the heading for the espionage mission cost.
Thresholds that the player has reached and mission costs that he/she could pay are shown in green.		All in white.
Rationale	If it isn't paid, it isn't a cost.	

Credits	The green numbers I've seen in anot	her mod, probably BULL or BUFFY.	
train Spies	costs are listed if the player can't (i.e. prior to Alphabet). Exception: hown if the player controls a Great	Mission costs are listed as soon as the player learns the location of a rival city.	
Rationale	Rather distracting to see the costs ea	arly in the game.	
See also	Ties in with change <u>004w</u> (uncluttering	ng the UI).	
	A Great Spy prior to Alphabet is a rather academic possibility since the Great Wall r longer provides Great Spy points (change 310).		
Production/Improvement/Building missions are shown as a single item "Sabotage" with mission cost "?". except Sabotage Improvement. The cost for Sabotage Production gives away the number hammers spent on the target city's unfinished		Sabotage Production gives away the number of hammers spent on the target city's unfinished production. The cost for Sabotage Building is	
Rationale	The Sabotage Building cost is mostly unhelpful – unlikely that the player wants to sabotage the cheapest building.		
	The amount of invested production is useful information (close to completing a Wonder?), but arguably information that the player shouldn't get for free.		
	The cost for Sabotage Project doesn't give anything away I think; Spaceship Parts are listed on the Victory screen.		
See also	103 allows Spy units to investigate cities; that's the fair way to find Wonders under construction. 045 hides buildings in rival cities (meaning that the Sabotage Building cost does give away secret information)		
See also	Should show the missions as in BtS when able to investigate the city. And should additionally name the cheapest building and the current production and its progress as "hammers/hammers needed".		
'Steal Technology" is shown without a cost if the player is unable to trade techs with the owner of the target city. If they can trade, the cheapest tech (on which the mission cost is based) is shown in parentheses in addition to the cost.			
would curre	sury" shows the amount of gold that ently be stolen (and on which the sion cost is based).	Can compute the amount of gold from the shown mission cost.	
Rationale	Don't want to give away the cheapest tech in situations when tech is otherwise secret (pre-Alphabet, No Tech Trading option). If a cost is shown, the cheapest tech can be deduced; more convenient and transparent to just name the tech. Same with gold.		
See also	004i tells a player from whom gold was stolen how much was stolen.		

120e	Al response to poisoned water and unrest	
AdvClv	BtS	

unrest don't meaning tha after a spy a	of poisoned water and formented affect the AI population target, at the AI tends to prioritize food more attack (in order to keep the current despite food lost due to anger and bac	The effects of spy attacks are treated just like other causes of bad health and anger when setting a population target, meaning that the Al lets its population shrink after a spy attack (may leven de-prioritize food).
See also	160 slows down starvation	
Tbd.	The AI should be more upset about poisoned water and formented unrest than about other spy missions. Could implement that, but spies get identified too rarely (25%; ESPIONAGE_SPY_REVEAL_IDENTITY_PERCENT) for it to matter. Perhaps give these missions a 50% chance of revealing spy identity even when the spy isn't caught? See also <i>Tbd.</i> under 120b.	

120f	Spy missions announced to third parties		
AdvClv		BtS	
Spy missions that cause a revolution are announced to third parties that know the mission target. The owner of the spy unit is not named in the notification. Missions that change the religion of a civ are recorded in replays along with the spy owner.		Third parties are notified of revolutions (and they're recorded in replays), but only the target of a spy mission learns about the mission, and no missions are recorded in replays. I'm not sure if the BtS AI uses the revolution missions much; the K-Mod AI does use them from from time to time.	
		of a spy mission and to assume that something civ switches to a suboptimal civic or religion, turns.	
	I don't think there is generally a way to infer whether a revolution was triggered by a spy. A normal revolution causes anarchy, but that anarchy has normally already ended when the next human turn starts. So this change reveals information that players don't have in BtS. I don't like that, but I like an AI that looks incompetent even less.		
Config	Switch in GloablDefines_advc.xml	(doesn't affect the replay message though)	

121	Misc AI changes to Worker builds and citizen assignment	
See also	131: Other minor misc. AI changes	
AdvCiv	BtS/ K-Mod	

For deciding whether to build a Fort or a cheaper The Worker AI frequently builds Forts on improvement to connect unworkable resources. resources that aren't (vet) workable. Forts are the AI uses a heuristic that considers the always preferred on these tiles. following circumstances: How busy Workers currently are overall; whether the tile has natural defenses; and if a Fort would function as a canal. Al always prefers any improvement with a Once Fort tiles become workable, the AI is positive yield over Forts on workable tiles, and hesitant to replace Forts with yield improvements. replaces the Fort when a tile with a Fort becomes workable (once a Worker finds time to Also likes to build Farms and Cottages on revealed but yet unusable resources, and doesn't do it: not necessarily high priority). replace them with improvements that connect the (Fixed a possible bug that may have prevented improveresource later on. ments that connect a resource – like Forts – from being replaced – even by an improvement that also connects the resource). Probably not a bug after all. I think my change only gives higher priority to replacing Forts. I've posted some screenshots about the K-Mod problems here. Rationale Forts cost a lot of Worker turns and often have to be replaced later on, so the Al should be hesitant to build them. Possibly a bug in BtS: The AI picks the most expensive improvement; was perhaps intended to be the cheapest (hard to say). My heuristic using natural tile defense leads to a reasonable number of Forts in reasonable locations. Not really smart, but looks good on the surface. Forts can theoretically be better than yield improvements even on workable tiles. A Silk Fort preserves the underlying forest, which is worth 1 production vs. the 3 commerce from a Plantation, 3 commerce is generally preferable to 1 production, and don't think the AI can figure out when 1 production is better. Better stick to the obvious improvements. Tbd. I'm still seeing Forts on workable Silk. I intend to add one commerce to Silk Plantation and Fur Camp anyway, will hopefully no longer happen then. Could also look into Fuyu's Better BUG AI code marked with "Forts Connect Resources but should never be built"; seems to address the same problem as my code. I don't think I've actually seen an AI canal yet (not through CvPlayerAI:: AI getPlotCanalValue either). See also 117 also deals with Worker builds (chopping). 017 makes the AI draft fewer units. 036 improves the evaluation of surplus resources, and this fixes issues with the AI not connecting those resources. AdvCiv K-Mod Al more reluctant to use Slavery. The K-Mod AI whips a lot; the BtS AI rarely. Al prioritizes food more when choosing Worker

builds and when assigning citizens.

Rationale	The AI can't judge well which city production is useful or urgent, whereas a larger population tends to lead to faster research, and that's always good. Short-term production is good for expert players, but the AI should better focus on long-term development. Team NP of the Civ 4 Reimagined mod have (independently) arrived at the same conclusion: "AI doesn't use slavery as extensively as before which results in bigger cities and stronger AI overall." (source)	
	The AdvCiv AI still whips more than the BtS AI.	
See also	110 shifts yield priorities to match the decreased use of Slavery. 912d allows Slavery to be disabled for human players.	
Increased the value assigned to GPP when choosing jobs for citizens by 38%, but made the value decrease faster with each additional GP. K-Mod comment: "[] because of the flawed we that food is currently evaluated, I need to dilute the value of GPP so that specialists don't get value more highly than food tiles. (I hope to correct this later.)"		
Rationale	I've noticed that the AI doesn't create enough GPs in the first half of the game and rather too many in the second half. I didn't look into the food evaluation issue mentioned by karadoc, but AI cities still seem to grow normally in tests.	

122	Changes to city trades	
Tbd.	Make the AI willing to trade cities with high foreign culture at peace and allow the AI to accept or give any trade items for cities (currently: only gives cities in peace deals or as gifts, and never pays for cities except with a peace treaty). This is already work in progress for v0.95, and there is some temporary code tagged with "advc.tmp" in CvPlayer::updateTradeList and CvPlayerAI::AI_cityTrade.	
See also	139 reduces the trade value assigned 104h: Slightly changes the conditions	d by the AI to evacuating cities. s under which the AI adds cities to peace deals.
AdvCiv		BtS
as reparat decreased	ty is traded, e.g. through liberation or ions, the tile culture of the old owner is I in the city tile and in the city cross (21 ept for tiles assigned to other cities of oner.	
The tile culture of the new owner is increased by the same amount that the old owner's culture is decreased. The amount of converted culture is equal to 50% of the old owner's culture or 100% of the new owner's culture, whichever is smaller. I.e. the new owner's culture can at most triple,		The new owner doesn't gain any tile culture. If the city is liberated, then the new owner's city culture (not: city tile culture) is increased by 50% of the old owner's city culture. The old owner doesn't lose any city culture. K-Mod disables the culture increase when the new owner had already owned the city at some earlier time; this
into culture increase tl	e old owner's city culture is converted e of the new owner. This doesn't he city's total culture (sum over all should be safe in multiplayer.	was done to block an exploit in multiplayer mode. City trades that don't count as liberation don't affect city culture.
Rationale	should have some (appeasing) effect	StS is jarring. That said, the mutual agreement ton the population, so I'm halving the removed lead to strange borderlines with foreign enclaves.
	The culture is converted to make the	city suffer less from culture pressure, to account

	for the consensual change in ownership (as opposed to violent conquest), to avoid strengthening the influence of third parties, and because culture shouldn't just vanish.		
	The converted city culture can't be based on the new owner's city culture because the new owner doesn't normally have any city culture. Therefore, I'm not using the tile culture conversion formula for city culture.		
Config	CITY_TRADE_CULTURE_THRESH in Glo	balDefines_advc.txt	
See also	dlph.23 removes the distinction between liberation and regular city trade when it comes to city culture.		
In order to be able to receive a city through trade a civ needs to have at least 10 percent tile culture there.		All cities can be traded between humans. The Al accepts all cities from humans where it has at least 1% culture, and otherwise refuses only if the city is 10 or more tiles away from the nearest Al city, or when in financial trouble (which rarely occurs).	
		Outside of peace negotiations, cities change hands between AI civs only through liberation (which requires much more than 10 percent tile culture).	
		Vassals can only receive cities through liberation; see next blue box.	
Rationale	Should make it harder to gift worthless cities to the AI. It's also implausible that a city could be given over to a nation that has no history there. Tile culture also implies geographical vicinity.		
the vassal h vassal may	A master civ can gift any cities to its vassal where Can only <i>liberate</i> cities to vassals. If a vassal isn'the vassal has more culture than the master. The the civ that would receive a city upon liberation, vassal may reject the city; will then appear in red then the vassal can't receive the city at all. on the Trade screen.		
A vassal ca other civ); r	n't offer cities to its master (or any no change.		
Rationale	vassals' cities, and that the inverse d	in place to prevent masters from demanding their irection had been assumed to be covered by that is culturally contested between a vassal	
	Giving cities to vassals means less he (and allowed, to begin with).	uman city management; should be encouraged	
	The culture clause is just flavor. I sup ruled by the vassal.	pose the master population wouldn't want to be	
Can liberate a city even if there is an enemy sea unit or non-combat unit visible from the city.		There must not be any unit hostile to the prospective city owner visible from the city. Otherwise, the city can still be traded, but it doesn't count as a liberation (no diplo bonus).	
Rationale		nable – if the new owner has to fight for the city, it can't attack the city shouldn't block liberation.	
are near a o war enemy.	city, that city can only be traded to a	Only liberation cares about hostile units, and that clause is only about units hostile to the new owner.	
While at wa	r with the previous owner of a city,		

that city can't be traded to civs that aren't at war with the previous owner.			
These two r	estrictions don't apply to liberation.		
Rationale	To prevent players from giving threatened (and possibly untenable) cities to an uninvolved party. In reality other civs (including the enemy at the gates) would simply not recognize such a change in ownership.		
Only reveal	Only revealed cities can be traded for. Can receive previously unknown cities as part of a peace deal. All cives accept unknown cities from human cives as gifts.		
	" make a trade proposal" option hidden when there are no eligible trade items. Proposal can lead to an empty Trade Screen.		
Rationale	A minor change while I'm at it. Not plausible that the AI is (supposedly) able to decide whether to accept a city that it has no knowledge of. Moreover, unrevealed cities are, in principle, secret in K-Mod, and the Trade screen can leak that info.		
	An empty Trade screen is a bit confus the early game after I excluded unrev	sing, and became a more common ocurrence in ealed cities.	
Tbd.	"What do you think of" - "Yes?" "Let's discuss something else" is also confusing (when there is no third civ to talk about), but funny enough to leave it alone.		
The AI recognizes awful city sites, doesn't accept If a city is close enough and has enough culture, such cities in trade and razes them after conquest.			
Rationale	The BtS behavior can be exploited by be thankful for it (fair trade diplo bonu	y gifting the AI useless cities, and the AI will even is). See strategy advise here (CFC).	
	That strategy still works, the city site	ust mustn't be <i>extremely</i> bad.	

123	Blocked exploits		
See also	Meatgrinder exploit: <u>139</u> . Worker stealing (<u>010</u>) is a bit of an exploit too I guess. Flat maps for lower distance maintenance: <u>140</u> . Gifting GP for diplo victory: <u>141</u> . Neutral units shielding cities from nukes: <u>dlph.7</u> . Gifting the AI useless cities: <u>122</u> . Gifting nukes: <u>143b</u> . Extra gold in Advanced Start with Expansive trait: <u>dlph.11</u> . Rival wonders under construction deduced through Sabotage Production mission cost: <u>120d</u> .		
	Loopholes closed by K-Mod (not a complete list I think): Prevent overflow shenanigans (or at least rein them in) by allowing multiple units to be produced within the same turn. Al never agrees to Cease Fire. Spread Culture spy mission doesn't increase city culture.		
Tbd.	If I ever want to write AI code for C would be the place (see comment	Cease Fire: CvPlayerAI::AI_considerOffer near the start of that function).	
123a	Can't gift Missionaries to bypass Theocracy		
AdvCiv		BtS	
		Can bypass the Theocracy restriction by gifting Missionaries. The AI will normally use them too.	
		Can gift Missionaries inside Caravels in order to spread a religion without OB.	
Rationale Arguably an exploit because the The		heocracy restriction is pretty pointless this way. And	

	keeping borders closed should keep	o Missionaries out, period.	
Credits	DarkLunaPhantom fixed the Theocracy part independently. I hadn't thought of cargo units (other than Caravels), so I've adopted part of DLPh's fix.		
See also	dlph.4		
123b	Blocked AI paths		
AdvCiv		K-Mod/ BtS	
	der should have no more problems units along the way.	Reportedly, the BtS AI is generally unable to plot around enemy units; in K-Mod, I can only recreate this for Barbarians vs. units blocking the entire inner ring of a city.	
Tbd.	Passing MOVE_ATTACK_STACK to AI sure about side effects.	cityAttack might be a cleaner fix, but I'm not	
123c	Chains of cargo units		
	can only be loaded as cargo if they st 1 move left.	Loading and unloading don't require moves (although Loading consumes all moves).	
	Can exploit this to move land units across arbitrary distances over water within a single turber rebasing. by using a chain of dispersed cargo units.		
123d	Reduce war success when trading away a city while at war		
the war suc	against the enemy), gift it to a war ally (no change to war success), wait for the enemy to conquer the city again (+25 war success again the player's ally), and repeat. The war enemy was then assume that the war against the player is going very badly.		
Rationale	Not so easy to exploit, but occasionally leads to quick capitulation.		
	Reducing the war success against <i>all</i> earlier owners can be overkill, but this is difficu to avoid.		
Tbd.	The war success counted for a cnquered (or traded) city should be based on the importance of the city. Currently, every city counts as WAR_SUCCESS_CITY_CAPTURING—which should remain the base value, to be multiplied by some modifier—except the capital, which already has a modifier of 1.5 (was 2 in BBAI; I've reduced it). The function that records war success is CvUnit::setXY.		
123e	Can no longer plunder gold from Barbarian cities		
Credits	Civ 4 Reimagined <u>1.2</u>		
See also	033 prevents Privateers from plundering vassal cities.		
123f	Fail gold only for great wonders and at most once per wonder		
Tbd.	Perhaps convert only 50% of the invested production into gold and the rest into city culture. That should be a separate change id though because it's a balance change rather than just blocking an exploit. For now, fail gold remains a valid tactic, and this gives wonders with very weak abilties (e.g. Chichen Itza) at least some use.		
AdvCiv		BtS	
	eat wonder is completed in a city, that mmediately removed from the	After a message about a rival finishing a wonder, another turn passes before the game removes

Exception: Members of the team that has completed the wonder never receive fail gold.		No such exception.	
wonder, but r	er has invested production into a removed that wonder from the ueue, no fail gold is generated.	Fail gold is generating regardless of whether the wonder is queued. This allows <u>crafty players</u> to cash in multiple times per wonder.	
	ts are treated just like wonders. tional wonders never produce fail	Units, national wonders, great wonders, world and team projects are all treated alike, meaning that fail gold can also be obtained from e.g. Missionaries (see e.g. this CFC thread).	
Rationale	already a pretty efficient conversion namely when a civ is beaten to a wo	for converting production into gold, and that's . Award fail gold only when it has to be done, onder by a rival. If there was no such ome too unattractive and frustrating. (Civ 6	
AdvCiv		K-Mod	
Units never produce overflow gold.		K-Mod uses excess production on additional units of the same type. Overflow can still occur I think, but only on units with a national limit.	
	As for buildings (no change): BtS 3.19 with the unofficial patch converts production into gold, becancels out building-specific modifiers like Ston for Walls.		
Rationale	A side-effect of disabling fail gold for units, and I don't think that overflow gold should be a worthwhile tactic.		
Config	MAXED_UNIT_GOLD_PERCENT in Glo	oalDefines_advc.xml.	
Tbd.	Once I remove the whip ability (hurry through population), it should be all but impossible to use the overflow rules for converting production into gold.		
124g	Need to choose research a.s.a.p. at the start of a game		
Once the player has founded a city, a choose-research popup appears. If the player ends the turn without addressing the popup or sets research back to "no technology" after dealing with the popup, the AI chooses a tech for the player and the popup appears again on the next turn. A choose-research popup appears one turn af founding the first city. If the player manages to avoid choosing a tech to research, then, during the first five turns, research is stored as overflown research; that research is spent once the player does select a tech and research modifiers are applied based on the selected tech. After five turns, the AI chooses for the player. Not choose a tech for five turns can yield a little bit of extra research due to known-tech modifiers; see the			
After founding the first city, the choose-research popup appears before the choose-production popup.		description <u>here</u> on CFC. The choose-production popup appears first.	
Rationale	turn to make the first turn easier for the player might move the Settler a this wouldn't make sense, and is a r	beginners, and set the limit to five turns because round a bit before founding a city. For this mod, needless (and exploitable) complication.	
	Choosing tech before production sh	ould actually be a bit easier for experienced

normal OB t	B at attitude one level below the threshold when sharing a war, but, if there is a revealed owned tile.	AI signs OB regardless of attitude when sharing a war.	
OB to a hun	tes OB with another AI (or proposes nan) 10 turns (on average) after villing to agree to an OB proposal.	20 turns	
20-turn dela	n Epic speed and a 40-turn delay on	20 turns regardless of game speed	
Rationale	Signing OB on the first meeting has a	llways struck me as strange.	
	Once the AI is willing to sign OB with 20 turns.	another AI, it shouldn't wait for another (up to)	
	About the speed adjustment, see the	discussion here on CFC.	
Credits	Got the idea for signing OB more quickly from Civ 4 Reimagined <u>1.3</u> . They even set it to 5 turns.		
Tbd.	With Paper, one can still get the AI to sign OB right away through map trading. AI should check if it can actually reach any foreign tile before signing OB.		
	The AI makes it a high priority to build at least one naval explorer once it knows Sailing. The AI prioritizes exploration only until meeting all civs.		
AI considers	s Galley to be suitable for exploration.	Unit AI types for Galley are only Transport and Attack. Before Caravels, only Work Boat and Trireme have the Explore AI type.	
Rationale	Due to the trade route rule change, the AI needs to explore coasts more reliably. Should use Galleys too because Work Boats get picked off by Barbarians at some point and Triremes come too late.		
See also	905a increases the speed of Galleys;	this makes them more suitable as explorers.	
Trade can pass through hostile plots if these plots are affected by a naval blockade by a party that is not hostile to the trading civ. In particular, the trading civ itself could blockade the plots. Trade can never pass through hostile plots and blockades can only prohibit trade.			
The AI does	not use blockades to enable trade.		
	h a friendly unit can be worked despite being- sabled again. It's a bit more sensible, but too bother.	Blockade prevents tiles from being worked despite the presence of units protecting the tile. Those units will have to engage the blockading unit to make the tile workable.	
Rationale	Occasionally, a declaration of war sev	vers important maritime trade connections	

between cities of one of the war parties or with some third party. This should not happen to a civ that has naval superiority. Would be too much work to get the AI to use blockades this way. Should the mere presence of a unit in a (land) tile cause that tile to be blockaded? How do you operate, say, a winery in a tile that is occupied by enemy military? Could argue that wine remains available from a stockpile for one turn, and after that turn the enemy has had an opportunity to pillage the tile. Would be nice to have the option of blocking a resource for several turns without billaging, but I worry that resources would get disrupted too frequently for just one turn. causing (human) trades to be canceled and citizens to be reassigned. Anyway, CvPlot::isTradeNetwork would be the place to implement such a change. A structure (route, fort or city) can only be part of If the tile is owned by another civ, then not even a civ's trade network, if that structure is revealed the tile needs to be revealed in order to carry trade. Otherwise, it's sufficient if the tile is to the civ. revealed, even if the tile is fogged and no structure existed the last time that it was visible. (Structures on unowned tiles are unusual though, so this isn't really a problem in BtS.) Rationale Consistent with the (AdvCiv) rule that trade only works along revealed tiles and can only be conducted with revealed cities. Somewhat important for <u>004z</u>, which lets the trade layer show trade connections on See also unowned tiles. Don't want the Trade layer to give away structures hidden in the Fog of

125	Culture from trade routes disabled		
AdvCiv		K-Mod	
,		Trade routes generate foreign tile culture in addition to raw commerce.	
Rationale	The only real upside of trade culture is flavor, and I don't think this justifies the added complexity. The confusing part is that trade culture could also be added to city culture (but it isn't). Tile culture from faraway trade partners may be a disadvantage in local border disputes; difficult to say.		
	Unimportant culture in plot help text is another problem. Very small percentages aren't shown, but this means plot culture sums up to just, say, 97% sometimes, which is confusing. (99% is OK – everyone's used to that.)		
	Another issue: The Nationality bar on the city screen can show only culture of up to four different civs, and this can't be changed within the SDK.		
Config	USE_KMOD_TRADE_CULTURE in Globa	lDefines_advc

126	Changes to the later-era start option	
See also	138 changes the religion assignment when starting in a later era 307 makes Machine Gun ineligible as a free starting unit (because it can't stop Barbarians from pillaging).	
AdvCiv		BtS
(except Fut grants free	free tech for each era after Ancient (ure) to each difficulty setting that technology to the AI. These free nly granted when starting in the era.	When starting in a later era, every civ receives at least all Ancient techs. Neither human nor Al receive free techs beyond those.
	e human player receives additional on Chieftain and Settler.	
the new free Mathematic	to Chieftain and Monarch to Immortal, e techs are cs, Machinery, Printing Press, er and Plastics.	
receive Ironworking	to those, Al Deity and human Settler g (only Al), Alphabet (only human), Gunpowder, Steel and Refrigeration.	
On difficulty settings that grant free units to the AI, more units are granted when starting in a later era: another defensive unit for each era beyond Ancient, another Worker for every 2 eras and another Scout or Explorer for every 3 eras. Every civ receives additional free units in later eras. AI civs also receive free units granted by difficulty setting. All free units are chosen base on the start era, e.g. Riflemen as defensive units in later eras.		
Rationale	Games starting in later eras tend to be much easier to win than normal games, surely in no small part, because the AI doesn't get a proper head start. No tech advantage, and the extra free units are relatively few compared with the total number of free units, which may even allow a human player to conquer a high-level AI right away.	
Config	The free tech is configured in Civ4HandicapInfo.xml.	
See also	301 prevents Barbarians from using Copper and Horse until these resources are connected by some city. This used to be a problem with Classical starts – Barbarians would have Axemen and Horse Archers right away, whereas the (AI) civs needed some 50 turns to establish access to Copper or Horse.	
Tbd.	The free techs aren't carefully chosen. At some point, I want to change the era of sor techs; can reconsider the freebies after that.	
	Later-era starts probably still have balance issues that make them too easy or too difficult to win; I've never even finished a test game starting in a later era. Would be nice to make at least Classical and Medieval starts playable; these aren't <i>that</i> different from normal games, but could be different enough to be refreshing.	
(GP) are not affected by the start era. are decreased by		When starting in Renaissance, the GP thresholds are decreased by 10%, by 20% for Industrial, 30% Modern and 40% Future.
Rationale	than when a normal game reaches the population each, free Forges and Me Engineers. This is pretty strange, so	er when starting in Renaissance (namely 100) hat era, and, with the two initial cities with two ercantilism, civs can and will immediately breed I was going to increase the initial GP thresholds wever, when starting in Renaissance, it takes way

	too long to discover essential Renaissance techs like Astronomy, and easy access to Great People can mitigate this problem. Now I'm simply using the standard thresholds as a compromise.		
Config	Civ4EraInfos.xml		
See also	005b skips early GP names when starting in a later era. 008a makes minor changes to the wonders available in later start eras.		
	The non-Ancient scenarios of the Danumber of GP have already been both	wn of Civilization mod pretend that a certain rn. Git commit: <u>GitHub</u>	
Free buildin	buildings per start era: When starting in the Medieval era or later, all cities founded throughout the game receive some free buildings.		
Renaissanc Industrial: A Modern: Co	Medieval: Granary, Lighthouse (if coastal) Renaissance: Aqueduct, Forge Industrial: Market, Harbor (if coastal) Modern: Library, Courthouse, Jail Factory, Recycling Center Medieval: Granary, Lighthouse (if coastal) Renaissance: Aqueduct, Forge Industrial: Market, Harbor (if coastal) Modern: Library, Courthouse, Jail Future: Factory		
Rationale	Want to keep it at two buildings added per era. Walls kind of spoil the fun, but Medieval rush tactics seem too potent in BtS. Free Walls in the Industrial era are immediately obsolete, but still raise city defense. No more room then for the coastal buildings. I also don't like that these give a somewhat obscure extra incentive (an additional free building) for settling at the coast.		
	Library instead of Forge in Renaissance should help jump-start research, especially through Great Scientists. Aqueduct should stick with Forge as it helps against the health penalty.		
	I suspect Jail was added in the Modern era because espionage was the big novelty when the later-era start option was implemented.		
Config	Civ4BuildingInfos.xml; to disable Walls (and Dunn) in the Industrial era, set their MaxStartEra to ERA_RENAISSANCE.		
Tbd.	Test this to see if the tech cost modifiers based on start era need to be adjusted.		
Decreased	the start turn for Medieval and Renais	sance start a little.	
Rationale	Should match the tech pace better (o	r less badly).	
Config	Civ4EraInfos.xml		

127 <i>Tbd.</i>	Changes to Al Auto Play Options One City Challenge and Always War should apply while in Auto Play. Lots of isOption (GAMEOPTION) &&isHuman() checks to be replaced with new functions like	
	CvPlayer::isOneCityChallenge and CvPlayer::isAlwaysWar that check isHuman() isHumanDisabled().	
AdvCiv	Al Auto Play mod	

While Auto Play is enabled, the proxy AI civs (i.e. Auto Play doesn't affect player handicaps: originally human-controlled) adopt the AI handicap.

E.g. in a singleplayer game on Emperor difficulty, the human civ normally incurs 100% inflation, and the AI civs 90% times 80% = 72%, from Emperor. The 90% comes from the AI handicap (Noble), and the 80% from the AI adjustment of the game handicap (Emperor). On Auto Play, the proxy Al civ also incurs 72% inflation.

however, proxy AI civs do benefit from AI bonuses defined by the game handicap.

In the example, the proxy AI civ incurs 100% times 80% = 80% inflation. Both factors come

Rationale

For simulating all-Al games, proxy Al civs should play by the exact same rules as the normal AI civs. AI Auto Play could also be used for fast-forwarding a normal singleplayer game e.g. when a human victory looks inevitable. In this case, the human Al civ should play by the same rules as a normal human. That's not what the original Al Auto Play does (see example above), and implementing it like that actually looks difficult. For development purposes, it's far more useful to treat proxy AI civs like normal AI civs.

This change makes it unnecessary to take the human AI civ out of the game (e.g. by surrounding it with Ice) when running a "Battle Royale"-style AI tournament.

Tbd.

Should scenarios with unequal AI handicap settings (e.g. Earth1000AD) be exempt from this change? E.g. the default handicap of France is Chieftain. If a player plays as France, sets the game difficulty to Emperor and starts AI Auto Play, what should the AI handicap be? Currently, it's the average of the other AI handicaps: Prince. I don't think the difficulty from the scenario is accessible from the DLL if the player configures a different one on the Custom Game screen.

The proxy AI ignores player options, in particular Proxy AI civs don't replace improvements and "Workers leave improvements/ forests". (Probably don't chop Forests if the respective options are also fixed in K-Mod 1.45, but I'm keeping my fix to be on the safe side.)

set.

Minimized popups (from the "minimize-popups" option) are killed when Auto Play starts.

Minimized popups can remain on the screen for some time.

Reminders (Alt+M) are not shown while in Auto Play.

Reminder messages and popups scheduled before starting Auto Play appear during Auto Play.

Rationale Probably just things idog hadn't thought of.

Auto Play ends at the end of a round, i.e. normally at the end of a Barbarian turn. That means, the human civ is treated as an AI civ during the AI turns. In particular, they can't send diplo messages to the human civ, so there can't be diplo popups when human control resumes.

Auto Play ends at the end of a proxy-AI turn. During the subsequent round of AI turns, the human civ is already treated as human.

If the human civ is not in slot 0, e.g. in a scenario, it is also already treated as human during the Al turns in lower slots.

Rationale	It's counterintuitive that e.g. running Auto Play for a single turn only skips over the human turn, but not the AI turns.		
	Diplo messages upon resuming are problematic because they force the human player to make decisions. Makes it impossible to simulate an all-Al game in chunks of e.g. 50 turns without any human influence. More generally, running Auto Play in multiple short chunks produces markedly different results than a single long run; not good.		
	Caveat: While there can't be diplo popups anymore right after Auto Play ends, popups are unusually frequent on the next turn. This is because the last-contacted timers of the AI civs keep decreasing during Auto Play. Put differently: The AI has much to say if you haven't spoken in a while.		
	For a fair all-AI game on Noble or Prince difficulty, it should now suffice to activate Auto Play on turn 0; for other difficulties, the WorldBuilder is needed for giving the human civ the same initial freebies as the AI civs. Could automate this (special treatment for Auto Play on turn 0), but it seems not quite worth the effort.		
Config	A Python change (AIAutoPlay.py)		
Tbd.	The player can still be forced to mak ends.	e a proposal or vote on one right after Auto Play	
Spectator m	ode		
following macivs and citic known to the Pact or Perragreement scity culture-fwonder comresolution of Legendary claunched/int The messagcan be locat by clicking or complete the control of the control of the messagcan be locat by clicking or control of the contro	es mentioned in the messages are e player's civ: war/peace, Defensive manent Alliance signed, vassal started/ended, city conquered/razed, pleted, Golden Age started/ended, aded, state religion changed, the Apostolic Palace or UN passed, culture reached, nuke sercepted. Jes are shown in the usual colors and the map once Auto Play ends on them in the Event Log.	I think the original Auto Play mod delivered messages as if the human player was in control, including indicator bubbles on the map that weren't cleared until Auto Play ended. No indicator bubbles in K-Mod (good), but colors and location info were also removed.	
Rationale	Civics changes (except Free Religion) and random events aren't reported because they occur too frequently.		
	It would be nice if messages did not refer to the player's civ as "you" (e.g. "You declared war on Alexander!"), but it's too much work to change this.		
	Sadly, one can't use the Event Log to jump to locations that aren't revealed to the active player. Looks like the EXE checks <code>isRevealed</code> with <code>bDebug=false</code> before moving the camera.		
See also	104v shows messages about AI war	plans when in Spectator mode.	
Tbd.	Also show messages about diplo resolutions that don't pass?		

ENABLE_AUG	Auto Play in multiplayer by setting TOPLAY_MULTIPLAYER to 1 in ines_devel.xml. All players become and de-automated at once.	Multiplayer is supposed to be supported in the final version (2.0, which is, as far as I can tell, the version included in K-Mod): "AIAutoPlay is now multiplayer compatible []: it will apply to all players, not just the one who activates it." (source)			
		This final addition probably wasn't tested much; due to what looks like a bug, only one player gets automated at a time, and only one can be returned to human control.			
		Moreover, K-Mod 1.30 made this change: "Autoplay and change player functionality is now only available in cheat mode." However, cheat mode ("chipotle") isn't recognized in multiplayer games.			
See also	ee also 135c allows Debug mode and WorldBuilder in multiplayer.				
Start and end of Auto Play are recorded in replays.					
See also	Relevant mostly for R&F				
	re not updated during Auto Play and ssages are displayed right after Auto	Al civs don't have attached Civ4lerts, but when a human civ comes under Al control during Auto Play, its Civ4lerts keep getting updated. When Auto Play ends, alerts are displayed based on the differences between the current game state and that on the last turn under Al control.			
Rationale	The updates during Auto Play are a waste of CPU time. And the game state after Auto Play ends can be completely different from the game state before Auto Play started; alerts shouldn't try to communicate that difference.				
See also	106c prevents alerts from being shown right after loading a savegame.				
Tbd.	I've added an is-AutoPlay check to every onEvent function in the two Civ4lert scripts. The cleaner (and faster) approach would be to unsubscribe the Civ4lert objects from being notified of game events when Auto Play starts and to re-register them when Auto Play ends. (It's an Observer design pattern.) My Python skills aren't quite up to this task.				
	AdvCiv4lerts class.)	ed during Auto Play in a clean manner through the			

Store location info (iFlashx, iFlashy) for most announcements	
---	--

When the player clicks on an announcement in the Event Log, the camera will normally focus on in a particular tile don't get associated with any a tile that has something to do with the respective tile on the map. Clicking on such an event:

Announcements about events that don't happen announcement in the Event Log has no effect.

Anarchy, Golden Age begun/ ended, project completed, civic/ religion change, circumnavigation: Jump to the capital of the affected civ.

DoW, war trade alert: Jump to the capital of the civ that started the war (unless it's the active player) or has become willing to start a war.

Peace made, PA, DP, vassal agreement signed/ broken: Jump to the capital of the civ that has initiated the treaty/ cancelation. (One might as well jump to the other capital; this is pretty arbitrary.)

Colony liberated: Jump to the location of the new capital.

Diplo vote: Jump to the location of the vote source (AP or UN); when a resolution passes, also show an indicator bubble on the map.

Rationale

No harm in allowing these camera jumps via the Event Log. Mostly helpful for following Auto Play games, in order to jump back and forth on the map as wars are declared, ended etc.

Indicator bubble for passed resolutions: "This is the city you need to conquer in order to stop such resolutions in the future."

128	Al cheats less obviously with visibility			
AdvCiv		BtS		
5		The Unit AI treats all tiles within a unit's search range as visible.		
	le tiles (e.g. visible by a different Al targeted within the whole search ange.			
Rationale	This (well known) Al cheat becomes very obvious when Al ships pursue human Privateers or intercept human cargo. (The search range is a multiple of the number movement points, and ships have lots of movement points.)			
	1	ecause this would leave the AI completely unable patrols could search for enemy cargo ships		
		finds targets on invisible tiles, and sometimes be human guessing and deduction, which also isn't		

129	Changes to resource and feature placement during map generation			
See also	021b prevents Fur from being place	d on hills.

of eligible tiles, and thus would normally be		The number of copies of a given resource is proportional to the number of tiles where the resource could be placed.		
Rationale	Make unusual maps a little less unu	sual and more playable.		
Config	SUBLINEAR_BONUS_QUANTITIES in G	GlobalDefines_advc		
resources of	a kind adjacent to each other, in nen placing a cluster of resources on	It seems that a cluster can theoretically fill an entire 3x3 square. The number of copies to be placed on the map in total puts a cap on this, but not on large maps.		
Added a separate resource class for Gold, Silver and Gems. Clusters of these resources are now kept at least 4 tiles apart. Can still overlap within a city's radius, but not in a way that would allow the city to work every resource. Can certainly still get more than 1 Gold/ Silver/ Gems within a city's radius, but 3 or more are quite rare now, even on large maps.				
Rationale	be fixed when assigning starting plo	ems or Gold tend to be overpowered. Could also ts or during normalization; however, the cluster dly with map size, so it needed work anyway.		
See also	also 108 also weakens starting plots, and it increases the value counted for commerce a bit when evaluating starting plots, which should make starting plot normalization mor fair.			
	try to place at least 0.88 Silver er player, and only 0.78 Gold	1 Gold per player and 0.67 Silver.		
Gold can appear on Snow, Desert and unforested Plains, river possible, whereas Silver can appear on forested Grassland and on Tundra regardless of Forest, but not along rivers.		Gold only on Desert and unforested Plains, and Silver on Snow and unforested Tundra. Both can appear next to rivers.		

Rationale

Gold was arguably more rare throughout most of history. More importantly, Gold is very powerful, and fewer occurrences should improve the game balance a bit.

Allow Silver to appear on forested Grassland to make it more common. Also, restricting Silver to extreme latitudes is, as far as I can tell, completely unrealistic; should really appear on just the same tiles as Gold. The intention was probably to make Gold and Silver more distinct. I'm trying to keep them distinct, but make the distinction more historically informed. The most famous gold rushes happened in the Australian desert, Alaska and maybe "on the banks of Sacramento," as a shanty savs.

Silver can't be or isn't commonly panned from rivers. The densely forested Central European mountain ranges have seen silver rushes in the Early Modern era (Berggeschrey), Grassland Forest also fits with Colorado and British Columbia. Indeed, silver mining might be more reliant on charcoal for refinement than gold mining.

Ancient Egyptian gold deposits and silver in Attica and Baetica also fit.

Gems can only appear on Jungle Grassland (though the Jungle can get cleared near a starting plot); thus distinct from Silver.

Credits

Inspired by Civ 4 Reimagined <u>1.2</u>, which also makes Silver more common than Gold.

When placing a cluster of resources, the probability of placing an additional resource decreases exponentially with each resource already placed. The potential target plots are processed in a randomized order.

The targets are processed in clockwise order. and each one gets the same probability (25 or 50%, depending on the resource) until the upper limit is reached.

Rationale

Make large clusters less likely, especially on maps that have large areas of uniform terrain because such areas are especially likely to receive large resource clusters (e.g. Ivory in a large area of Plains).

129b

No flood plains on river bends

orthogonally adjacent to a river. Desert tiles that to a river mouth. are only diagonally adjacent to a river still get 1 commerce from the river, but no Flood Plains feature.

Flood Plains appear only on Desert tiles that are Also on river bends and tiles diagonally adjacent

This change affects all standard map scripts and also <u>PerfectMongoose</u>.

Rationale

Cities with too many Flood Plains don't play well, and, in reality, not every flat desert soil becomes fertile when irrigated. This could be addressed by reducing the appearance probability of the Flood Plains feature from 100% to, say, 67%. I like the river-side rule better because, graphically. Flood Plains on river bends can be difficult to see and bending rivers are the ones that produce the highest number of Flood Plains within a city radius in BtS. I've thought about an exception to allow Flood Plains diagonally adjacent to river mouths as the flood plain is usually widest at the mouth:

But this really isn't a good way to depict a river delta: should use distributaries instead. Also, the absence of a Flood Plains diagonal to the river mouth leaves room for a city and thus encourages civs to settle at the river mouth.

Config	Would be nice if the Fractal map generator would sometimes create distributaries at a river mouth. I think, currently, this can happen, but is very rare. Civ4TerrainInfos.xml	
Tbd.	Shorten the Floodplains texture so that it doesn't get so close to the tile corners. Currently, Deserts on river corners look (almost?) the same as in BtS, so it's easy t forget that corner tiles no longer receive Floodplains.	

130	Changes to AI diplo modifiers (DDiplo)			
See also	112: vassal agreements (especially voluntary ones, whereas 130v and 130d focus on capitulated vassals) 141: No diplo effect from gifted GP			
AdvCiv		BtS		
130a	Sustained peace			
civ is met. T decrease fro	eace" only start to count when an Al The turns needed per relations bonus om 60 initially to 30 in the middle of normally AD 1700) and then stay at	Years of peace are counted from the beginning of the game. The relations bonus is one for every 60 turns (and at most 2).		
Rationale	Being ignorant of each other's existence shouldn't "strengthen relations," and civs that have just met shouldn't have strengthened relations. That said, don't want to make it too difficult for civs that start isolated to find partners on other continents. The decreasing threshold should also help keeping "years of peace" relevant after war in the late game – when the game may end in 100 turns, it's almost irrelevant whether relations are going to improve 60 turns from now.

longer have However, ce	ower half of the leaderboard no +1 relations with each other. ertain leaders still grant a relations s ranked beneath them (no change).					
No rank-bas	ed modifiers in the first game era.	Modifiers change a lot in the Ancient era because ranks change a lot.				
are ranked o	mes that civs not yet encountered on the very bottom (or top) of the ; i.e. these civs don't affect relations.	The AI magically knows the ranks of unknown civs. Humans can sometimes use inter-AI diplo values to deduce the ranks of unknown civs.				
Example: Assume that the human player is ranked 7th at the start of the Classical era, and gradually climbs to rank 1 over the course of the game. Al Peter starts on rank 4 and stays there until overtaken by the player. Let's say he meets all his rivals during the Ancient era. Peter's modifier toward the player then starts at +1, changes to 0 when the player reaches rank 5, to -1 when Peter is overtaken, -2 when the player reaches rank 3, -1 again at rank 2, and 0 as the player takes rank 1; see the table below.		+1 until the player reaches rank 3, then 0, and -1 when the player takes rank 1. I suspect that the initial +1 is due to a bug and should be +2 until the player reaches rank 6.				
Rationale	Presumably, a (slight) tendency of the AI to gang up on the leader of the field was intended. Not unreasonable, but it doesn't work: Civs that are far behind can't do much to impede the leading civs. They just hurt themselves by sulking.					
	It's not necessarily wise for civs in the lower half to stick together either. Cooperation is just one way to improve, war another.					
Tbd.	Should be based on score ratio inste	ead of rank difference.				
	ikes civs that are ahead of him and nat are behind him, just like all the ers. Willem is the only leader that dislikes civs that are behind him, and likes those that are ahead.					

Rationale	Probably a mix-up by the BtS developers.			
No diplo bonus from rank when the low-ranked civ is already at stage 3 or 4 of a victory strategy. Conversely, Al civs at stage 3 or 4 of a victory strategy only assign a diplo penalty to civs at victory stage 4. Al victory strategies were introduced by BBAI; the diplo modifier is only based on rank.				
Rationale	In the endgame, score and rank become unreliable measures of how well a civ is doing.			

Rank player vs. Peter	7-4	6-4	5-4	4-5	3-5	2-5	1-5
Modifier AdvCiv	+1	+1	0	-1	-2	-1	0
Modifier BtS intended(?)	+2	+1	+1	+1	0	-1	-1
Modifier BtS bugged(?)	+1	+1	+1	+1	0	0	-1

Example 130c

130d	A master can't be its own vassal's worst enemy, and capitulated vassals can't be anyone's worst enemy. Can't ask civs in a vassal-master relationship to stop trading with each other.			
Rationale	Most of the consequences of worst-enmity don't apply to the master anyway, in particular, the vassal will always trade with the master. That means, a vassal with its master as worst enemy effectively has no worst enemy at all. Perhaps OK, but certainly don't want a vassal to promote trade embargos against its master.			
	<u>UWAI</u> ignores relations with capitulated vassals; to be consistent with this, capitulated vassals should not be worst enemies. Capitulated civs are already marginalized; their enemies should be content with this.			
130e	Worst enemy updated upon relations change			
AdvCiv		BtS		
changes, that civ's worst enemy is immediately updated. Attitude is updated after making pattitude chang will still consider.		Worst enemy is only updated at the end of an AI team's turn, i.e. never during a human turn. Attitude is updated immediately though, so, e.g. after making peace with a human civ, if the AI attitude changes from Annoyed to Pleased, the AI will still consider the human its worst enemy for the rest of the human turn.		
Rationale	Attitude and worst enmity should be	consistent during human turns.		

130f	Trade embargo changes			
See also	130m: Al requests an embargo when at war and too Annoyed to ask for military aid. 001q fixes a bug in the computation of the price charged for an embargo. 001e fixes a bug that causes the Al to make a stop-trading demand against a civ that has just stopped being its worst enemy. 104o uses the Al embargo trade value as a lower bound for the Al war trade value.			
Tbd.	Would be nice to let the Foreign Advisor show the time-to-cancel for deals between other civs. Would have to happen in CvGameTextMgr::getDealString.			
	A dozen AI leaders have stricter attitude thresholds for embargos than for sponsored war (Alexander, Brennus, Hammurabi, Mansa Musa, Mehmed, Peter, Roosevelt, Saladin, Suleiman, Suryvarman, Wang Kon, Zara Yaqob; maybe more when THEM_REFUSE_ATTITUDE is counted as well). E.g. when Mansa Musa is Pleased or Cautious, he can be persuaded to begin a war, but says "We don't like you enough" when it comes to embargoes. He likes to trade, and I guess war is seen as a trade in this context (hired for war) and embargo as sth. that severs trade; but of course an embargo is also a kind of trade and a hired war also severs trade These leaders should perhaps be willing to stop trading when willing to go to war, but only for a high price. An alert (see 210) about AI willingness to stop trading would be helpful.			
AdvCiv	BtS			

Apart from vassal and peace treaties, a trade embargo cancels all deals, including those recently signed.

Embargo doesn't affect deals with a positive number of turns left to cancel.

The AI refuses to stop trading if it is currently receiving reparations from or paying reparations to the target: "Not right now ... Maybe we'll change our mind in a few years."

Rationale

It's confusing when some deals aren't canceled, especially between AI civs because plavers can't see which inter-Al deals are recent. This contributes to embargos being largely irrelevant, and allows players to undercut AI embargo requests by renewing resource trades every 10 turns.

Tbd.

Or rather treat reparations as in BtS?

Can't propose a trade embargo if currently trading with the target. Once enacted, the civ that embargo), the embargo does not affect the civ proposed the embargo is affected by it as well, i.e. the target won't talk to the instigator, though there is no diplo penalty for having "stopped trading with us", only the penalty for negotiating a trade embargo.

Except for the diplo penalty (negotiated a trade that proposes it.

Exception: A master can always tell its capitulated vassals to stop trading; this does not disrupt the trades of the master. Moreover, the capitulated vassal agrees to the embargo without asking for compensation. The master still receives a diplo penalty from the embargo target though ("negotiated a trade embargo").

The vassal asks for compensation.

When a capitulated vassal breaks free or when a If e.g. a master asks its vassal to stop trading civ capitulates, all stopped-trading memory of and about that civ is deleted.

with a rival, the rival continues to not talk to the vassal even if the vassal breaks away.

Rationale

Trading with a civ after negotiating an embargo seems implausibly hypocritical.

The precondition for proposing an embargo (having no current deals with the target) is needed because, otherwise, embargo proposals could be employed to terminate uncancellable trades at will. This would be problematic in the case of per-turn war reparations.

Regarding the exception for capitulated vassals: Colonies being allowed to trade only with the mainland was a common practice in mercantilism. I'm keeping the diplo penalty because I don't want players to routinely enact embargoes after accepting capitulation; that would be a bit tedious.

signed deals, and such deals don't prevent the resolution from being proposed. Exception: The civ that proposes the resolution mustn't have deals with the target that are too recent to be canceled. The other AI civs try to honor their commitments by voting against the resolution if they have deals with the target that couldn't normally be canceled.

Stop-trading resolutions (UN, AP) cancel recently Recently signed deals don't prevent resolutions, but resolutions also don't cancel such deals.

Rationale	, , ,	m gifting 1 gold per turn to an AI in order to block and to prevent human players from proposing a arations.

The OB men	nory has an upper limit of 60.	The relations bonus is +1 for every 25 turns. Although the bonus is capped at 2, the OB memory keeps increasing after 50 turns with OB.
Rationale		nory and counters decay (130r, 130k). Regarding we lasted for, say, 250 turns would never decay to nus.
130j	Friendly AI more resentful about bad Changed scale of AI memory	actions, Annoyed Al happier about good actions
corresponding Furious, 3 if it action pleases Annoyed or w This results e Friendly civ, a	on displeases the AI, it adds 1 to g memory if it's already Annoyed or 's Friendly and 2 otherwise. When ans the AI, it adds 1 if already Friendly, 3 if orse and 2 otherwise. .g. in -4 relations for a DoW on and only -2 if they're Annoyed.	The AI stores separate memory about each civ and for each type of action, e.g. DoW or an accepted tribute request. When a diplo action occurs, the respective memory is increased by 1. The current AI attitude has no impact on this. (Although the AI e.g. doesn't make tribute demands at Pleased.)
(Disabled the increased by	attitude-based logic again.) Memory is 2 in all cases.	

This faster increase of memory is evened out by 100% faster decay than in BtS for all memory types, and the impact of each remembered action is halved.

Since each action normally corresponds to a memory value of 2, it's unlikely for an action to be completely forgotten after a few turns, or to be remembered fully for a long time.

"You razed our cities/ a holy city" and "You nuked us" work differently; see <u>130q</u>. (But not "You nuked our friend".)

The decay speed depends on the memory type and leader personality. E.g. Alexander remembers accepted tribute for 50 turns on average. That said, he could also forget about it within just 5 turns or still remember it after 115 turns (both ca. 10% probability).

Rationale

To make relations more dynamic. Also more plausible that a civ leader would be more indignant about a DoW by a friend than by an enemy. The decreased randomness is a welcome side effect.

It doesn't make sense to base the diplo penalty for razing and nuking on attitude because these penalties only occur when already at war, and, then, the enemy attitude is usually Annoyed or worse. One could, alternatively, treat raze and nuke like the other diplo actions, but increase their base penalties; however, this would also affect razed cities with culture of nonwar parties (which aren't necessarily Annoyed), and the BtS base penalty of -2.5 is already severe in this case.

I've disabled the core of this change in v0.91 because it's a change that players need to know about, but that actually matters rarely. It can also create a counterintuitive incentive to keep relations below Friendly.

The more fine-grained memory counting remains in place.

See also 130r uses an even finer scale for memory about declared war.

130k Some randomness added to AI diplo counters

See also 130i deals with the OB counter, and 149 with resource trade.

Counters relevant for diplo increase and decrease probabilistically by either 0, 1 or 2 per turn.

When the condition for increasing a counter is not met, the counter is decreased by 1.7%.

For every civ, the AI keeps track of the number of turns spent in various relationships with that civ: war/peace, shared/opposed religion, shared civics, resource trade, defensive pact, OB, shared war. E.g. the defensive pact counter is increased by 1 on every turn that the two civs have a defensive pact, and decreased by 1 otherwise.

Rationale

While memory decay (130j) is too unpredictable in BtS, the counters are too predictable. E.g. the "years of peace" bonus kicks in after exactly 60 turns.

Exponential decay should make diplo bonuses from counters less sticky.

The probability of increasing or decreasing a counter is adjusted to the game speed setting. While an AI civ is in the Ancient era, the probability is divided by the Growth modifier (e.g. 150% on Epic speed); after the Classical era, the divisor is the Golden Age modifier (e.g. 125% on Epic speed); and, *in* the Classical era, it's the mean of Growth and Golden Age modifier (e.g. 137% on Epic).

No game speed adjustment.

	On slower speed, more trades and wars tend to happen throughout the game than on faster speed, but the difference is not that great, so the Golden Age modifier seems like a good compromise. The early game is special because early wars are rare, so the peace and Open Borders counters usually increase monotonously until the Iron Age or so, and at that point, the relations bonuses often make AI leaders unwilling to attack each other on Epic and Marathon speed. Hence the extra slow increase during the first game era.
See also	130r factors game speed into memory decay. Should contact frequencies also be affected?

130m	Shared-war diplo bonus based on war success	
AdvCiv	BtS	1

+1 relations for currently sharing a war (no change), more than that only if the one side has had losses in the war (i.e. is at least in some need of assistance) and the other side has also had losses or has inflicted losses on the shared enemy (both count equally). The exact formula is remains for the entire game. It is only suspended complicated; see AI getShareWarAttitude in CVPlayerAI.cpp. The total relations bonus is capped based on leader personality (no change). The shared-war counter also matters for Moreover, the bonus can't go higher than 2 unless the teams have shared a war for at least 8 after at least 40 turns of shared war. turns; another 8 turns are required for every further point.

Success (and losses) in the shared war are remembered by the AI beyond the end of the war. but decay by 1.5% per turn (even while the war still lasts). The relations bonus for a remembered shared war is reduced if the AI needs help in a current war, but the former ally hasn't joined the war.

The shared-war counter decays by 0.1 per turn (on average) when no war is being shared.

The AI counts the turns spent together at war (shared-war counter), and for every 8 turns. increases relations by 1 up to a limit that depends on the AI leader. This counter never decreases, meaning that the relations bonus while the former war allies are at war with each other.

Permanent Alliances. The AI only agrees to those

Rationale

The everlasting relations bonus was reported as a potential bug for the <u>Unofficial</u> Patch 3.13, but didn't get patched, and I agree that the BtS behavior is probably deliberate. That said, a permanent relations bonus is clearly too big a reward for just staying at war. My change should ensure that you need to fight alongside the AI in (somewhat) good faith in order to get a relations bonus.

I don't think players need to know the specifics of the war success formula; I hope it works pretty intuitively.

No shared war bonus if either war ally is a capitulated vassal.

Shared wars can bring a master and its capitulated vassals closer together.

No defensive pact bonus for capitulated vassals. All vassal agreements are treated as defensive

pacts when it comes to relations bonuses.

Rationale

Capitulated vassals are dragged into war by their masters. They should generally be unhappy about that. At best, the shared war experience can make up for this unhappiness.

Al less likely to ask for military aid if the war is still recent; same frequency overall. If Annoyed toward the player, the AI asks for an embargo instead of joint war. Past wars by the human don't matter.

Al civs on whom a human civ has declared war in the past don't ask that human civ for military aid. but the current attitude isn't an obstacle.

Also less inclined to ask for war against a civ that Can't ask if there's peace treaty, i.e. for 10 turns; the player recently made peace with.

beyond that, recent peace doesn't matter.

Rationale

A joint war is asked too much from a civ that the AI considers to be an adversary. (Or they could ask, but they shouldn't be mad when denied.) Embargo requests should generally be more common when the AI is at war.

If the player has recently been at war with the target, then, apparently, the player is unwilling or unable to defeat the target. Also don't want the AI to drag players into the same war repeatedly.

is extra effect memory. Of hostile to the		War success has no impact on the shared-war diplo, no matter where it occurs.

Rationale		whether a joint war is a bad idea, but the player enalty (help refused) for not being stupid.

130n	Religions that the AI has only recent	y encountered cause a lower diplo penalty
AdvCiv		BtS
No diplo penalty for different religion from AI civs that don't know a single city with that religion. Once they do encounter the religion in a city (from exploration, map trade or because the religion spreads), it takes 8 turns for the diplo penalty to switch on.		The diplo penalty applies almost fully (up to -3) upon meeting a civ with a different state religion. After 5 turns, it gets 1 worse.
	To help initially isolated, religious AI civs to catch up through tech trade once they meet their rivals. In BtS, everyone tends to be Annoyed toward the newcomer. Should also lessen religious animosity in the early game, but won't delay it for long. Also doesn't make sense to me that a civ leader instantly hates a religion when	
	he/she first hears about it.	a of reader instantly nates a religion when

Tbd.	I've had a better idea for this: The penalty should be based on the ratio
	min{ known population with the offending religion, known population with the AI religion } / known world population.
	Currently, small religions are tolerant, but not tolerated. Can then remove the clunky time-based progression (variable ReligionKnownSince). Will need a cache for the above ratio that gets updated at the end of each turn before updating the attitude cache.
130o	Changes to made-demand memory
See also	130v prevents vassals from acceding to tribute demands from rivals. 144: refusal of gift request.

When a human player declares war on an Al civ (primary DoW; not through DP), and that Al civ remembers having paid tribute to the player, the Al civ and all non-vassal Al civs that it has met set their recent-demand memory about the player to 8, which (due to change 130j) means that they won't consider any requests for help or demands for tribute by the player for (on average, on Normal speed) 80 turns.

Accepting tribute results in a 10-turn peace treaty. After that, there is no particular penalty for declaring war despite tribute.

If the AI denies a demand for tribute, the human player does not receive a diplo penalty. Only granted tribute results in "You made an arrogant demand", and this memory decays after 30 turns on average. I.e. the only negative consequence of a denied demand is that the recent-demand memory increases.

Accepting tribute still results in a peace treaty.

When an AI civ declares war (primary DoW) or signs a vassal agreement, it sets all its arrogant-demand memory to 0.

"You made an arrogant demand" regardless of whether tribute was granted; never goes away.

Rationale

The BtS mechanism incentivizes players to demand tribute from civs about 10 turns before attacking them anyway. Not at all how tribute should intuitively work, not how it works when the AI asks tribute from a human player, and not an interesting decision.

Could go about improving this in many ways. My approach is supposed to be low-key and low-effort. I've removed the penalty for failed demands because players need to be able to tell if a civ has actually paid; if it hasn't, it's OK to attack. Moreover, a penalty for a failed demand encourages reloading.

Not sure if the penalty (no requests for 80 turns) is painful, but at least it makes it impossible to routinely receive tribute before going to war.

Not ideal that the safety period is tied to memory decay, and thus randomized.

Wouldn't make sense to apply this change to AI civs that declare war after receiving tribute from humans; AI civs never request or demand anything from each other, so increasing AI-to-AI recent-demand memory would have no effect.

An earlier implementation kept the "arrogant demand" penalty for unsuccesful tribute demands, and added a new type of diplo memory ("exacted tribute") to distinguish the two outcomes.

Config

The 80 turns are customizable in GlobalDefines advc.xml.

Tbd	
-----	--

Arrogant demand should be remembered for a non-randomized period of time. Also, 30 turns is too long: trv 25.

Would be nice to show info/ a reminder about this change on the diplo screen, before or after the player makes a demand; however, the text with which the AI responds to a demand is also used for vassal tribute (which doesn't cause "arrogant demand" memory) and "We demand that you give us this in tribute" mustn't take up more than one line because it's always shown while the player arranges trades. Could show a message I guess (outside the diplo screen) ...

Would like rejected gift requests to add only 1 to recent-demand memory: lower stakes that way. Would have to move code from CvPlayer::handleDiploEvent into CvPlayerAI::AI considerOffer for this.

Gandhi gets as upset as most other Al leaders (i.e. -1 relations) when he pays tribute.

Gandhi is the only leader who doesn't mind tribute demands.

Rationale

Otherwise, the new mechanism couldn't apply to Gandhi, which would be strange: why do the other AI civs not care when Gandhi is attacked after paying tribute? Gandhi has still enough other quirks; he may well be the leader with the most extreme personality overall.

When the AI disregards a request for a gift or a tribute demand because it still remembers a demand memory), recent-demand memory is only increased by one, meaning it'll take half as long as in BtS until the next request/ demand is considered.

Each request adds fully to the recent-request memory, meaning that, if the AI still remembers recent request or demand (both based on recent-one recent request when a new request is made. it takes 40 turns on average until another request is considered.

Making requests and demands can't increase the maximum of 10 demands. I.e. one can worsen recent-demand memory beyond 2.

Also, each tribute demand (regardless of success) further worsens relations, up to a relations almost arbitrarily within a single turn.

Rationale

Thanks to change 130j, there's now a lighter punishment available for aggressive begging. 40 turns is awfully long.

If UWAI is enabled:

The AI remembers for 10 turns on average (plus Only remembers "You gave us tribute" (for 50 the duration of the peace treaty) whether a human has recently accepted a demand.

turns on average), but not whether the tribute was granted recently.

While the peace treaty from the demand lasts, the AI doesn't plan war against the human. After the peace treaty, so long as the demand is remembered as recent, the AI treats the human as if its attitude was at least Pleased (as far as war planning is concerned).

The BtS AI never plans war during a peace treaty, but the K-Mod AI does; and the K-Mod AI is able to declare war shortly after the peace treaty ends.

Rationale

Since humans are now encouraged not to attack shortly after receiving tribute, it seems like a double standard when the AI does it.

130p	Fair-trade bonus and enemy trade penalty reworked. All pretty complicated (and especially complicated to describe), but, hopefully, in the end, the bonuses work as one would intuitively expect.	
AdvCiv		BtS
Each time a trade is made, a score based on the		Raw gold values are recorded without adjustment

normalized gold value of the traded items and the for game speed or game progress, and don't current asset totals of both parties is recorded. The accumulated score decays by 1.45% each turn (Normal speed). The relations modifier computed from the remembered score is subject have known each other. to diminishing returns, meaning that more trading is needed in order to get from e.g. +3 "fair and forthright" trade to +4 than from 0 to +1. The modifier is increased a bit if the two civs have only recently first met.

decay. When computing relations, the total recorded gold value is divided by the has-met counter, i.e. the number of turns that the two civs

See also

131 makes some minor adjustments to asset totals.

Rationale

The BtS formula works OK for Normal speed in the first third of the game, but becomes too sensitive later in the game (because trade values increase faster than the has-met counter), and on slower game speed settings. It also produces weird results for civs met in the middle of the game; a small gift can be enough for a +4bonus or -4 penalty, and modifiers can decrease rapidly as the has-met counter increases.

I'm taking a more explicit approach by recording normalized trade scores and applying exponential decay each turn (instead of implicit decay through increasing trade values and has-met counters). Asset totals seem well suited for computing trade scores because they tend to increase at a similar pace.

Despite the decay, trade scores still tend to be higher between civs that have known each other for a long time than between civs that have recently met. It does, therefore, make sense to take into account the has-met counter, but the effect is now much smaller than in BtS.

Tbd.

Make this more sensitive when tech trading isn't allowed.

The fair-trade relations modifier is multiplied by all leaders, so this matters only if a mod-mod changes some MemoryAttitude values. For enemy trade, MemoryAttitudePercent-EVENT BAD TO US is used instead. This is also 100 for all leaders.

Not based on personality at all, neither through a MemoryAttitudePercent-EVENT GOOD TO US in multiplier, nor through bounds. (The bounds are Civ4LeaderHead.xml, which, however, is 100 for hardcoded as -4 for enemy trade and +4 for fair trade: this is still the case in AdvCiv.)

The fair-trade modifier is based on the difference 100% of what the other side received is between the recorded values of items that the Al subtracted. I.e. a human who makes only deals has received in trade minus 5/6 of the recorded values of items that the other side has received. receives a "fair and forthright" relations bonus.

with the AI that the AI finds perfectly fair never

Rationale

It's clear enough that "fair and forthright" is supposed to be a bit of a euphemism, but trades that are actually fair should still have some impact. This should also make it a bit easier for AI civs to reach mutually Friendly relations (despite change 148, AI-AI friendships are a bit scarce).

Open Borders (OB) with a worst enemy contribute significantly to the relations penalty. The impact is based on the number of turns that so small that the impact is negligible. the two civs have had OB. None if the borders aren't currently open.

OB and DP factor into the trade memory for both fair trade and enemy trade, but the deal value is

OB (and Defensive Pact; DP) have no impact on Resource trades don't matter for trade memory. the fair-trade bonus, and don't contribute to trade All ongoing deals can cause the Al to demand a memory. Resource trades add to trade memory,

130s	Accepting to join a war gives +1 relations	
AdvCiv	BtS	

When a human player accepts an AI request for war aid, this is remembered as "You agreed to come to our aid in wartime." for 100 turns on average (on Normal speed).		The relations effect, including the explanation text, is implemented, but disabled in Civ4LeaderHeadInfos.xml. The duration is set to 150 turns on average.
The bonus is suspended when the human civ isn't sharing any war with the AI civ and the AI civ is fighting at least one war.		
Rationale	The thankless help requests bother some players; military assistance shouldn't be treated as a matter of course – that's what defensive pacts are for. Perhaps the original developers felt that the shared-war bonus is enough reward for a declaration of war, but now that the shared-war bonus is harder to get (change 130m), it should be OK to reward the granted request directly. 150 turns seems a bit much though.	
Config		advc.xml. (Or in Civ4LeaderHeadInfos.xml, be made for each leader individually.)

AdvCiv		BtS
civ Y for hav X is based o no penalty if DeclareWar	n the attitude of X toward Z. There is the attitude is one higher than the Them threshold, or when X also has or when X is too weak to attack Z	No penalty if X has a DP with Y; attitude doesn't matter.
e.g. Darius, a Pleased for of for Catherine Pleased in the	eWarThem threshold is at Annoyed for at Cautious for e.g. Hannibal and at e.g. Julius Caesar. (And at Friendly e, but this is no different from nis case because I'm using the us 1, and Friendly is the highest tude.)	

Rationale	BtS doesn't properly factor DP into enemy trade diplo, and I think it's better to have all the negative DP diplo in one place anyway. A DP of Y with both X and Z shouldn't satisfy X and Z unless they like each other. In this constellation, Y threatens war on X if X should attack Z, which should offend X. Y also promises to protect X; but this is covered by the DP relations bonus (no change to that).	
	As for the threshold, I've considered using the DefensivePactRefuse threshold from Civ4LeaderheadInfos.xml, which is Cautious for some leaders, but a leader that is quick to sign a DP shouldn't necessarily be forgiving about a rival DP. (The opposite could be true: these leaders think that DPs are important, and are therefore worried about rival DPs.)	
	Warmongers tend to have high DeclareWarThem thresholds (easy to convince to declare war). These leaders should be bothered most by DPs.	
Al refuses to	sign a DP without OB: "Surely, you must be joking."	
Rationale	How are you going to defend us without entering our borders??	
	rival peace vassals works the same see <u>130w</u> r about defensive pacts.

trade based on attitude) disregards the attitude of capitulated vassals. 033 stops capitulated vassals from training Privateers.

CFC discussion about the relationship between capitulated vassals and their masters:

Tbd.

I'm considering to turn capitulated vassals into voluntary vassals after some time: perhaps after 30-35 turns. Would only need to implement a popup asking the master to sign the new agreement or else free the vassal.

Some way for a master to free a voluntary vassal would also be nice.

Capitulated vassals should perhaps only be allowed to trade tech with their masters. Or just prevent them from brokering to other civs. That said, the AI currently keeps its vassals (capitulated ones too) at arm's length tech-wise: that might have to be changed if vassals can't trade or broker.

AdvCiv

If a capitulated vassal

- razes a (holy) city;
- trades with someone or someone's enemy;
- has OB with someone's enemy; or
- nukes someone (but not just someone's friend)

half of the resulting relations modifier is applied to the vassal, and half to the master.

Relations penalties about shared borders are also shared between vassal and master.

In team games, the penalties apply to the leader of the master team.

Actions of a vassal don't reflect on the master. but civs are generally upset about "rivals" being vassals to the master's "empire", and vassals are possible war targets. Prior to K-Mod, the Al attitude toward the master was generally lowered based on the attitude toward the vassal.

Rationale

My thinking is that there shouldn't be grudges against capitulated vassals because they're basically dead already. This opens up a loophole: A human master could let vassals do the dirty work (razing), or use them as buffers against shared-border anger. BtS attitude averaging would fix this issue, but would also punish the master for e.g. the vassal's religion and any bad deeds prior to the vassal agreement.

The change about nukes is obsolete because 143b now prevents capitulated vassals from having nukes.

Vassals are always Friendly toward their master, Voluntary vassals are Friendly toward their and capitulated vassals share the master's attitude toward rivals, but their attitude can be at free. The attitude of and toward capitulated best Cautious. Al civs project their attitude towardvassals is computed normally, but rarely matters. a civ onto the capitulated vassals of that civ.

This does not apply when a vassal is deciding whether to break free.

Masters are Pleased toward their capitulated vassals, and capitulated vassals are Pleased toward fellow vassals with the same master.

Vassals never grant gifts to rivals and never ask When a vassal grants a gift to a rival or receives gift to its master (no matter if capitulated), the vassal checks its actual attitude (what the attitude would be if it weren't for the vassal

master except when deciding whether to break

Sometimes a (capitulated) vassal has a much more positive attitude toward another civ than its master, and will trade away technologies that the master wouldn't trade.

rivals for gifts. When deciding whether to grant a one, a peace treaty is signed between the master and the rival. Thus a civ with multiple vassals can sometimes be kept at peace indefinitely.

treaty).		Capitulated vassals with few cities left tend to found cities in marginal spots because the
Capitulated vassals are slightly reluctant to found cities, especially on other continents.		additional expenses (esp. for number of cities and civics) are small. The additional maintenance for the master isn't taken into account.
AI Spies are reluctant to attack a rival's capitulated vassals.		Al doesn't attack it's own vassals (still the case in AdvCiv).
	Given my other changes, the attitude of and toward capitulated vassals really doesn matter anymore, and showing them, as is often the case, Annoyed toward their master is misleading. I'm still showing the actual relations value (e.g. "Friendly (-2)") and modifiers because they do matter again if a vassal breaks free.	
	If vassals are supposed to be zombies, they shouldn't be relevant for tech trading, a they generally shouldn't undermine the master's foreign policy. Until v0.85, I had capitulated vassals share the master's attitude toward other civs, but this made it to easy for a human player to dictate civics and siphon gold from vassals with Al masters; now they're at best Cautious toward rivals.	
•		The Glance tab shows relations between all living (non-minor) civs.
Rationale	The Glance tab gets quite crowded in large games, and capitulated vassals don't have interesting relations because they follow their masters in matters of diplomacy.	
		No automatic changes to human espionage weights ever.
	onale Easy to forget, and cases in which a player would want to continue espionage against his/her capitulated vassal should be extremely rare. I'm not making the same change for voluntary vassals because these agreements are often fleeting.	
AdvCiv		K-Mod
Capitulated vassals support all resolutions proposed by their master.		Team members of the Secretary-General (SG) support all resolutions. Civs Friendly toward the SG support some proposals, but not all (non-proliferation, force-civics).
Rationale	Since all votes are cast simultaneously, vassals can't always vote along with their master – they don't know how the master is going to vote.	
	dlph.25 allows vassals to support the master in repealing resolutions (which requires them to vote "No" on the master's proposal).	

130w	Penalty for expansionism: "We oppose your ruthless expansionism"	
AdvCiv	BtS	

Up to -4 based on the number of owned cities with foreign majority culture (depending on the difference between highest culture and owner's culture), the total number of cities, and the personality of the AI leader (peace weight minus warmonger respect). The penalty is reduced if the AI civ's military can't compete with that of the expansionist civ.

The AI is (much) more sensitive about cities it previously owned. Other than that, so long as just about a quarter of a civ's cities are foreign, none of the other civs will mind.

Up to -5 for the number of capitulated vassals, typically about -1 per vassal, but it depends on the number of cities owned by the vassal, the initial number of civs, and (as above) AI personality and power ratio. This penalty is added to the one for voluntary vassals (130t), and they're displayed together as "We are worried about our rivals being vassals to your empire".

If a civ has at least one vassal, the "vassals to your empire" penalty is based on the military power of the master and all its vassals. Other than that, there are rank-based penalties (130c).

Rationale	Not fair to give a penalty based on military power only to civs that control a vassal. A civ that just conquers all cities isn't less threatening. Since I don't want to remove the vassal penalty, I'm adding a counterpart that penalizes conquered cities. In any case, penalizing military power isn't good because that hardly affects human civs.
	The personality-based term means that e.g. Genghis Khan won't easily get upset about expansionism, which is consistent with his own behavior and his first-impressions bonus with other warmongers. Moreover, I don't want all leaders to increase the penalty synchronously because, then, conquering a single city could have a big negative impact on relations overall; the personality factor makes sure that the overall effect changes smoothly.
	Power ratio is factored in because it doesn't help if small civs stop trading with the expansionists – this mostly hurts the small civs.
	As razing doesn't remove tile culture, this penalty can't be circumvented by razing (and razing carries its own diplo penalties too).
	I've considered ignoring cities culturally owned by an enemy (war enemy or worst enemy) of the AI civ that opposes expansionism, but decided this shouldn't make a (big) difference; territorial expansion needs to be opposed even if it has happened at the expense of an enemy.
See also	Without <u>099</u> (culture of dead civs stays in the game), this change wouldn't really work because cities conquered from eliminated civs wouldn't count.
Tbd.	Should perhaps be reduced if the AI civ that opposes expansionism has conquered much more territory. Can seem a bit hypocritical the way it is now.

130x	Normalized diplo from shared/different religion and civics	
See also	130n delays the diplo penalty from "heathen" religion	
AdvCiv	BtS	

The maximal relations bonuses from shared religion and civics are reduced if many known civs have this religion or civic. The maximal penalty for having a different religion is reduced if many known civs have a different religion.		between +2 and +6 for civics (+6 only for Stalin, Mao and Gandhi), between +2 and +7 for shared
		religion (+7 only for Asoka and Zara Yaqob) and between 0 and -2 for differing religion.
		Unaffected by the bound: +1 for shared religion/civic and -1 for differing religion regardless of the number of turns. The civ with the holy city adds another +/-1 for religion.
Rationale	The high diplo bonuses from early civics, especially Hereditary Rule, are too easy to get, and BtS diplomacy gets boring when everyone's in the same religion.	
	The change seems also realistic: if everyone shares a trait, it gets taken for granted, and lack of external enemies leads to infighting. And it's unwise to eschew everyone when they all have "heathen" religions.	
Tbd.	Should probably dial this up a bit, i.e. further reduce the relations bonuses from civics.	
	Diplo bonuses for religious civics should be reduced (or disabled) if the state religion doesn't match. Shouldn't get a net relations bonus for sharing, say, Organized Religion with Suryavarman and running a different religion.	

130y	Lower diplo penalties for wars involv	ing vassals, DP or seeing little action
AdvCiv		BtS
penalty is red side has had than 0.3 time times the era	duced (but not beyond -2) if the other	The declared-war penalty is solely based on the number of declarations of war; only the (unimportant) hidden "this war is going badly" penalty is based on war success.
capitulated v reduces its d	is also reduced if either side is a assal. And a capitulated vassal eclared-war penalties when it dependence.	When declaring war on a master civ, war against the vassal civs is implied, and the aggressor gets the full (never decaying) -3 "You declared war on us" from each vassal, even if the war takes place entirely in the master's territory, and ends up
capitulated to automatically	freed because its master has a third civ, the third civ makes peace with the vassal, but ng a peace treaty.	freeing a capitulated vassal. Likewise, when a master declares war, its vassals suffer a -3 relations penalty.
against the fi been a capiti	v doesn't have much war success reed vassal, and the free vassal had ulated vassal, the third civs gains +2 ted us independence" from the freed	When a civ capitulates, the vassals of that civ are freed. They remain at war with the master of their former master, and the former master declares war on the former vassal.

Rationale	Shouldn't hold civs fully accountable for declarations of war if these declarations were enforced by the vassal system, especially not for capitulated vassals. The change should make it easier to free vassals and have a cooperative relationship with them henceforth.	
	I'm factoring in war success because vassals should not be happy about being liberated when that involves killing most of their units or taking away their cities.	
	The reduced penalty for non-vassals practically only applies to wars where neither side sent any units or an invader changed its mind in the face of tough defenses. Not plausible for such wars to have long running repercussions.	
See also	130h disables war-on-friend penalties for attacking master/vassal alliances; sha reduces "war spoils our relations" penalty if there is little war success.	
Tbd.	Should perhaps also add "granted us independence" memory when the master is eliminated.	
-2 relations	penalty from the civ that triggered the angle to "war on friend" penalties.)	
Rationale	Diplo penalties for fulfilling a DP seem justifiable, or at least not wrong enough to change radically. I'm just reducing the penalty a bit.	
Tbd.	Should probably not assign war-on-friend penalties when war is triggered by a defensive pact, and perhaps not for wars declared by capitulated vassals either.	

130z	Al gives help also to other Al civs	
AdvCiv		BtS
vassal civ tha leader is at le a low difficult	at has fallen behind and that the Aleast Pleased with. Friendly relations,	Only human civs can benefit from this. Pleased attitude is required, Friendly and difficulty don't matter. (Although a low difficulty makes the Al easier to please.)
The choice of the tech is biased toward low research cost.		The tech chosen uniformly at random.
(No change to the AI routine for gifting tech to vassals.)		
See also	112 deals with tech gifts between vassal and master. The gifted tech is also chosen randomly based on cost in that context. The part that takes into account the difficulty level is based on 250a.	
	Especially with <u>SPaH</u> , it's not so unlikely for experienced players to trigger this Al behavior, and I don't think those players would want the AI to help them compete. So one could either disable the help routine for medium and high difficulty settings, or extend it so that AI civs can benefit too. I've done the latter because it can actually make sense for an AI civ to help a weaker partner; humans do that too sometimes.	
Tbd.	Should perhaps ask for gold in exchange if the recipient happens to have some.	

See also	cdtw and rom for such changes adopted from other mods. 121: Al changes to Worker builds and citizen assignment	
Tbd.	Open K-Mod issue: "Fix AI's tech evaluation" (<u>link</u>)	
AI more likel	y to build a high-utility building than a	an arbitrary XP or gold building.
AdvCiv		K-Mod
Prior to the Industrial era, the AI is reluctant to build certain National Wonders in its capital, in particular Moai Statues and Globe Theater.		Moai Statues in capitals are fairly common in K-Mod. If Globe Theater is also built in the capital, the AI can't build Oxford University there.
at least 7, the	e AI considers building the National reshold increases by 2 with each era	The threshold is 10 (flat), and the AI often doesn't build the National Epic until late in the game.
Rationale	•	one wonder or three specialists. Could happen in early "GP Farm" in the capital isn't bad.
Tbd.	Oxford in the capital shouldn't alway by a balance change.	s be the best choice; that needs to be addressed
	_	with a lot of good unworked land tiles. ChangeWeight would be the place for that
	National Epic is probably still not giv	en enough priority.
Al tech evaluation: Reduced the value assigned to units whose resource requirements aren't met. E.g. to make the Al less inclined to research Horseback Riding when it doesn't have a Horse.		K-Mod: Already reduced; I'm reducing it more.
AP.		
handle negative utility values correctly.		The inertia mechanism has the opposite effect when dealing with negative utility values. Negative values probably don't occur though (nor in AdvCiv I think).
Rationale The values of religions can fluctuate when two religions spread in parallel or owners change repeatedly in a war. Probabilistic switching means that the Al wait for some turns when the one religion isn't far better than the other.		Probabilistic switching means that the AI tends to
	I had implemented the same thing for civics, but removed it again; see my p in the K-Mod subforum (the "Update" part under No. 1).	
Credits	The change for negative utility values is inspired by a similar change in "RoM: A New Dawn" by koshling. SourceForge revision: <u>link</u>	
Tbd.	Can currently only switch religion every 15 turns unless Spiritual (see calls to AI_setReligionTimer) and civics every 20 turns. Would be better to lower the perturn probability of switching based on the turns elapsed since the latest switch.	

-			
See also	001r fixes a bug that had caused the AI to switch civics too readily.		
gold in the tr	starts a revolution if it has enough reasury to prevent the strike counter ag 2 during anarchy.	During anarchy, civs have 0 income and expenses except that gold deals still need to be paid. This means that anarchy leads to a strike when a civ has no gold in its treasury. If anarchy lasts only one turn, the strike has no immediate effect, but multiple turns of anarchy lead to disbanded units. Moreover, the strike turn counter is never reset, so once there has been a strike, even a single turn of anarchy can lead to disbanding.	
Rationale	ale I've thought about suspending gold deals during anarchy, but then what about the that is supposed to receive gold? For a human player, it could be confusing if an A pays no gold during anarchy. If gold is received without having been payed, then to could exploited in multiplayer (team) games.		
Perhaps the strike counter should be reset or counted backwards (probabilist when there is no strike; but then a single turn of strike now and then would have negative consequences at all.			
See also	132b: Vassals with a human master	reluctant to switch civics.	
the population	on of the capital hasn't grown beyond		
The AI assurunexplored.	Don't count tech value for potential domestic trade routes when having only 1 city. The AI assumes that it is not geographically isolated when more than 25% of its continent remains unexplored. Consequently, naval exploration is not prioritized in the very early game on account of being isolated.		
	So long as the AI isn't sure whether it is isolated (no one met and 30 turns not yet passed), the values counted for military units are reduced.		
Reduced the	e utility counted for working water wh	en the average city population is small.	
Rationale	Rationale Mostly to prevent the AI from overestimating Fishing and Sailing in the very early game. Apart from Lighthouse, an early discovery of Sailing can lead the AI to waste time on a Galley or to construct Moai Statues in the capital.		
their default	Swordsman and Legionary have Attack City as their default AI type. Non-default AI types are Attack and Reserve. For all Swordsman units, the default is Attack, non-default Attack City and Reserve. The earlied non-siege unit with default AI type Attack City is Maceman, the next one Grenadier.		
		The default AI type seems to matter mostly when the AI evaluates units that it can't train yet. Will then, for each AI type of the new unit, compare the new unit with the best current unit that has the matching default AI type.	
Rationale	The main advantage of Swordsmen over Axemen and other early units is that Swordsmen are better at attacking (AI) cities held by Archers.		
See also	907a renames Praetorian to Legionary.		

Battleship h	as the (non-default) AI type Escort.	Destroyer is the only late-game unit with Escort AI type. I don't think the Escort type is required for accompanying cargo ships, but if more escort ships are needed, the AI will only train ships with the Escort AI type to fill the ranks.	
Rationale	Battleships don't come much later than Destroyers and aren't that much more expensive. They can handle enemy Battleships, and a mix of Destroyers and Battleships can stand up to the endgame ships (Missile Cruiser, Stealth Destroyer) and air attacks.		
See also	905a removes the Escort AI type from	n Caravel.	
	The evaluation of an extra trade route granted by Looks like the K-Mod fomula only accounts for current cities.		
Rationale	The AI is sometimes very slow to dis	cover Currency.	
Tbd.	Currency still seems to be underrate	d (and Code of laws overrated).	
AdvCiv		BtS	
an asset val	Ancient technologies and Horseback Riding have 8, 16, 24, an asset value of 6, Classical techs 12, Medieval 18, Renaissance 24, Industrial 30, Modern and Future 36.		
The Infantry	unit has an asset value of 4.	3 for Infantry, but e.g. 4 for SAM Infantry. The total asset value of a civ is computed as 2 per citizen, 1 per land tile, up to 48 per technology, 1 to 5(?) per non-wonder building, 16(?) per great wonder, 8(?) per national wonder. For units, the asset value usually corresponds to the square root of its power, rounded down; though e.g. not for Infantry.	
See also	130p uses asset totals for computing trade-based relations modifiers.	The total is used only for deciding whether an Al civ asks for a free technology or offers one.	
Rationale	BtS asset values are heavily skewed toward technologies. E.g. early technologies cost only 60 research and count as 8 assets, whereas 4 population (also worth 8 assets) cost at least 88 food and 8 Archers cost 280 production. This is probably intentional: when the human player gets ahead technologically, the AI is supposed to ask for help even if it has more units and citizens. It was just a bit too extreme, at least for the purposes of 130p.		
	Horseback Riding being treated as an Ancient tech might be deliberate (*shrug*).		
Tbd.	The asset values for buildings look crazy; e.g. 1 for Drydock, but 2 for Barracks and 3 for Lighthouse. Hard to say how the original developers came up with these.		
Al weights in Civ4TechInfos.xml			
AdvCiv		BtS	
Feudalism.		All weights are 0 in BtS and K-Mod. Al weights are added to the utility values computed in Al tech evaluation. The intention was probably to give non-DLL modders a way to bring the Al to research techs with novel abilities.	

Rationale	In test games before releasing v0.93, half of the AI civs were researching Iron Working right after Bronze Working, and Feudalism was practically always researched before Machinery. This is out of step with the historical development and, more importantly, makes these techs unattractive to research for human players as they're easy to get in trade.
Tbd.	This is a temporary measure. Not sure how to fix this more permanently though. Swordsman, Longbowman and Serfdom really are very useful for the AI. Eventually, I'd like to split Feudalism into two techs; see tech-tree.pdf.
	The AI weight should arguably be multiplied by the number of cities in the DLL in order to match the scale of the tech utility values. Currently, a non-zero AI weight for a late tech would have less impact on a map that gives civs a lot of room to expand. Shouldn't be much of a problem for early/ midgame techs because civs can't expand that quickly.

132	Changes to civics and religion trade	S
AdvCiv		BtS
negotiation) switch to an the initial or threshold as that faith"). religion can different stacan still (as	ng vassals and war enemies (peace of the control of	Can only ask anyone to switch to own civics (except the initial ones) and own religion (unless "not enough people").
The petitioned side charges twice as much trade value in case (a) if the petitioner is not running the target civic or religion. In case (b), twice as many espionage points are needed.		
multiple civi multiplayer are possible	se trades that ask them to make cs changes in the same column. In (not tested), I imagine such trades and will result in the player adopting it was added to the trade offer first.	As the trade table is not part of the SDK, mods can, to my knowledge, block only individual trade items, not combinations of trade items.
Rationale	makes sense to demand a switch to	ensible, but only when negotiating as peers. E.g. it Pacifism as part of a peace treaty, or to ask a or Theocracy so that the master's corporations
	Also more interesting (and entertain	ing) options this way.
	0	used civic makes sense in case (a) because the s, and (somewhat) in case (b) because the Spy et civic/ religion.
	seems far-fetched to switch someon civ in the game has been in Vassala	that many options on the diplo screen. Also he to, say, Vassalage in the Modern era, when no lige for 500 years. Assume civs to be somewhat conomics. These are also the columns with the

	isolationist civics Mercantilism, State	Property and Theocracy.	
	n to be present in the city where the	The target religion has to be present in any one city.	
Rationale	More plausible this way; don't think i	t matters much for game balance or Al behavior.	
	e impact of the number of cities with ligion on the mission cost.	K-Mod already adjusts the mission cost, but rarely increases it by more than 100%.	
Increased th force-civic by	e base cost of force-religion and y 25%.		
the target re		The AI uses the mission even if just 1 city has the target religion. The affected civ usually switches tback to its former religion after 5 turns.	
Rationale	Being forced to convert from a widespread religion into one with just a single city can be very painful. I've considered allowing only major religions as the target religion, but a cost increase and a change to AI behavior should suffice.		
Config	Partly in Civ4EspionageMissionIn	fos.xml	
Tbd.	The number of religious cities should be factored into the mission cost <i>modifier</i> , not the base cost, because the UI shows a breakdown of the modifier, i.e. the impact of the city count could then be displayed by CvGameTextMgr::setEspionageCostHelp. Same for the cost increase when the Spy owner doesn't run the target civic or religion.		
predicts the goods-produ	When asked to change civics or religion, the Al predicts the losses from anarchy based on the goods-produced (production) and GNP (gold + research; 004s) curves. Based only on city counts, both of the Al civ and the human who's asking for the change. Can underestimate the cost by a factor of 10 in the late game.		
Rationale	The human cities shouldn't play a ro during the second half of the game,	le, and the AI city count could well stay the same but the cost of anarchy doesn't.	
132b			
	re reluctant to switch civics if their	Vassal/master status doesn't affect civic choices.	
·		The diplo bonus from sharing a religion with the master factors into the religion choice of the vassal.	
Rationale	Humans tend to ask vassals to adopt certain civics; switching back and forth doesn't help either side.		
132c	Switching to a state religion requires at least one city with that religion; doesn't suffice if another team member has a city.		
Rationale	No special need for team members to align their state religions. Major religions are also determined based on per-civ city counts, and not per-team.		

133	Al cancels more deals	
AdvCiv		BBAI

		Tribute deals remain in place until (if ever) the Al reaches so much military power that it wouldn't have agreed to the deals in the first place.
Rationale	BtS/Warlords custom code for deal of	have been introduced by BBAI, which replaced cancelation with calls to AI_considerOffer. als from non-vassal tribute demands and gifts do
	ing whether to cancel a resource de-denial conditions are checked.	Trade value is checked every turn, but not denial conditions like those based on attitude. There's a special clause that cancels deals with the worst enemy of an AI civ.
Rationale		or from the beginning, but a bit awkward to CvPlayerAI.cpp: "getTradeDenial is not on properly.")
	The denial check also cancels deals when a player imports Rice and late	that no longer make sense for the other side, e.g. r settles on a Rice resource.
AdvCiv		K-Mod
with human decreases b beyond the bound: 10%	lues have become uneven is 35% civs and 45% for Al-Al deals, and by 1 percentage point with every turn 10 turn minimum duration; lower for human, 20% for Al.	and not decreasing over time.
Rationale	The changes to AI resource evaluativalues; hence the increased tolerand	on (change 036) lead to more fluctuation in trade ce.
See also	Relies on code written for <u>036</u> . <u>155</u> allows the AI to cancel deals wit	th members of its own team.
AdvCiv		BtS
If an Al-Al resource deal is canceled, the Al immediately tries to make a new deal.		Depending on the AI personalities, regardless of cancelation, a resource deal between two AI civs is considered every 1-5 turns on average.
Rationale		to some back and forth in the city management of but better to avoid it. Should also lead to more to keep track of for human players.
When a vassal agreement ends, all remaining deals between vassal and master can be canceled by either side (turns-to-cancel set to 0).		Deals with a minimum duration can't be canceled until the 10 turns are over, regardless of the vassal agreement. This includes resource gifts to the vassal.
Rationale		ced to continue free resource deliveries. For ree resource trades continue between two AI civs nent.

Permanent A the threshold agreements. turn probabil	open Borders, Defensive Pact and Alliance when Al attitude drops below ds for signing the respective Cancelation is delayed with a perity except when the other side has Al civ's worst enemy.	Al cancels these agreements immediately when the other side becomes its worst enemy. Otherwise, Al attitude doesn't lead to cancelation (though other considerations may). Borders can remain open indefinitely despite Annoyed attitude.
Rationale	I think the original idea was that deals get canceled when their attitude threshold isn't met anymore; they just didn't get the implementation right.	
	The delay is supposed to give the other side time to amend relations before canceling OB. (Once OB are canceled, it's difficult to get them back because the "brought us together" diplo bonus is lost.)	

134	Changes to AI-to-human offers	
See also	136b also fits here (map trades offered by the AI)	
134a	Al offers peace (only if UWAI disabled, and never offers to pay for peace)	
AdvCiv	BtS	
When comp own end-wa	• • • • • • • • • • • • • • • • • • • •	The AI never contacts a human player to offer peace (or capitulation).
Rationale	Peace offers apparently worked in V	anilla; not sure when they broke.
		offer worth considering. K-Mod has introduced a good idea; without this incentive, the AI might as
Tbd.	I had to work around a bug in the BtS executable that suppresses diplo popups from war enemies. My workaround relies on the exact order of calls at the beginning of human turns, and on the order of call parameters of the atwar function. Messy. Some modders had planned to reimplement the Trade screen (for various reasons); this should fix the problem in a cleaner manner, but, so far, nothing became of it. CFC threads: #1, #2 On that note, I would also like to show the turns-to-cancel when a player unsuccessfully attempts to cancel a deal through the Diplo screen. I see no way to implement this change without reimplementing the Trade screen. My workaround breaks if the AI offers to pay for peace or to capitulate. Perhaps this can somehow be fixed inside the DLL, but, after struggling with this for a whole day, I've given up.	
Disabled this change if UWAI is enabled because UWAI uses a different order don't want to adjust the workaround while the UWAI code may change again		
	Probably better to remove change 134a altogether and rather send a message human player, asking for a call-back.	
134b	(Disabled) No discount if recently begged	
AdvCiv		K-Mod
The AI offers n for a gift.	o discounts to civs that have recently asked-	The AI doesn't grant gift requests by civs that have recently asked for a gift, but discounts aren't affected by gift requests.
	sually more profitable to ask for gifts all the ait for discounts. If so, this change would	

 discounts, which isn't what I want. (I want to eriodic gift requests.)

AdvCiv		BtS
135a	Resource bubbles	
	active until a player deactivates	Resource bubbles are deactivated at the end of each human turn. Other map layers (e.g. yield display) are not reset.
Rationale	The BtS behavior is annoying if all players want to play with resource bubbles. Otherwise, the players could still agree not to activate them, or one player flicks them on and the next one flicks them off.	
Tbd.	The proper solution might be to remember each player's active layers at end of turn, and restore them at the beginning of the next turn of that player. Same for player options and BUG options, which are currently shared by all players. Could store layers and options in savegames, but storing them in non-serialized data members of CVPlayer would already be an improvement.	
See also	004m increases the default zoom dis	stance (also reset each turn in Hotseat).
135b	MoreCiv4lerts in Hotseat	
AdvCiv		BUG
the MoreCiv		MoreCiv4lerts fire every turn in Hotseat; unusable.
Rationale	The first package of alerts seems to have been implemented with multiplayer in mi but not the "More" ones.	
This might also be fixed in the BUG main branch (see this comm		main branch (see <u>this</u> commit).
Tbd.	Don't know if the alerts also work for networked multiplayer.	
See also	106c also fixes issues with Civ4lerts. 106b always opens the Event Log when there is a new message in Hotseat.	
135c	Debug tools in multiplayer	
AdvCiv	1	BtS

Can use WorldBuilder (WB) and Debug mode in WB is always available in singleplayer; Debug multiplayer if ENABLE DEBUG TOOLS MULTIPLAYER IS mode (Ctrl+Z) requires cheats to be enabled set in GlobalDefines devel.xml. (I quess all players should set it if multiple PCs are involved.) multiplayer, both WB and Debug mode are In networked multiplayer (i.e. anything except Hotseat), "chipotle" needs to be set as the game the SDK and several checks inside the SDK, name under "Host Game" in addition to the XML presumably to make certain that cheating is switch. The text on the large flag button will then impossible. say "cheats enabled" in order to make sure that no player can secretly cheat. The cheat code in civilizationIV.ini doesn't affect multiplayer. Entering the WB makes network games go out of sync (OOS) immediately; will have to save and reload afterwards.

400

through CivilizationIV. ini (code "chipotle"). In blocked through a cheats-enabled check outside

Rationale	Debug tools are indispensable for multiplayer testing. Not sure if the OOS issue the WB can be fixed; could just be a side-effect of my hack to make the WB accessible.	
	Still missing: Python console (impossible?)	
See also	127 allows enabling AI Auto Play in multiplayer. 001n fixes OOS errors. 007 describes how OOS errors can be debugged on a single PC.	

To get rid of the cheat level checks in the CvGameTextMgr class more easily, I've split the setPlotHelp member function into several subroutines and made some changes to const qualifiers. That could make it a bit difficult to merge this change into another mod.

Changes to map trades	
Circumnavigation checked at end of turn	
	BBAI
The game checks at the end of each civ's turn if that civ has circumnavigated the globe. Thus, if, through a map trade, two civs meet the circumnavigation conditions on the same turn, only that civ is rewarded on whose turn the map trade is completed. In a human-AI map trade, the human always wins because trades involving the humans are always completed on a human turn.	
	Whether an AI is willing to trade it's map depends entirely on the leader's attitude threshold.
The BtS rule leads to the trap sketched on the upper right. Checking at end of turn instead puts the AI at a bit of a disadvantage because human-AI trades can't be completed on an AI turn. That said, the AI suggests map trades to human civs relatively rarely, and never with an intention of completing circumnavigation, so the change doesn't really hurt the AI.	
The trade refusal should make it harder for a human to steal circumnavigation fr Al that is already close.	
	Circumnavigation checked at end of necks at the end of each civ's turn if circumnavigated the globe. Thus, if, ap trade, two civs meet the ation conditions on the same turn, is rewarded on whose turn the map pleted. In a human-AI map trade, Iways wins because trades involving always completed on a human turn. o one has achieved ation, the AI refuses to trade its map Caravels. ("We have our reasons.") in Caravels, but the other side can, es twice as much for its map. The BtS rule leads to the trap sketch instead puts the AI at a bit of a disact completed on an AI turn. That said, it relatively rarely, and never with an ir change doesn't really hurt the AI. The trade refusal should make it har

136b	Al doesn't pester human with unattra	active map trades	
the human s	The AI proposes no trades to a human civ where the human side receives only the AI map when the human value of that map is 5 gold or less. The AI occasionally asks human civs to exchange maps even if the AI map has no value to the human.		
multiples of !	Changed the rounding of AI trade values to multiples of 5. Makes the implementation of the above change a bit easier. Trade values are rounded to a multiple of 10.		
	The AI refuses to accept trades with a value of less than 10 (the equivalent of 5 gold).		
Rationale	Rationale These map trades are pointless distractions.		
Config	The rounding change is implemented in GlobalDefines_advc.xml.		

137	Recommendations on game settings	S
AdvCiv		BtS
menu for the	e sea level includes recommended he number of players. ("+x% players ed.")	When the world size is changed, some player slots are automatically opened or closed in order to match the recommended number of players. No such thing happens when the sea level is changed.
	ext of Terra, Oasis and Pangaea.	The Terra description contains a warning about the map being especially large, but it doesn't say whether the player number should be adjusted to this. Description texts are only shown under Play Now, not on the Custom Game screen.
Rationale	Having the proper number of civs is imo pretty important, and sea level has a big impact on this. The recommendations, if followed, should lead to about the same number of cities per civ as with Normal sea level.	
	I think Terra plays best if the old wor player numbers don't suffice for this.	ld is rather crowded with civs. The standard
	Recommendations weren't my first of	choice. Some things I've tried:
	because the Custom Screen isn't part of the	matically when the sea level changes. This can't be done SDK. When slots are opened/closed in response to a world o also factor in sea level, but then the sea level needs to be what player normally do.
	is the name of the map script file, and chang recommended") would result in a second ma down menu with a single choice, but appare	ne Custom Game screen. The displayed map name ("Terra") ging this file name (to e.g. "Terra - extra players ap, listed in addition to Terra. I've tried adding a dummy dropntly at least 2 choices need to be given. 138	Religion assignment when starting in later eras	
AdvCiv	BtS	

When starting in an era other than Ancient, the automatically founded religions are assigned based on handicap, Spiritual trait and favorite religion. More specifically, on difficulty settings above Noble, the game prefers to assign religions to AI civs, and on lower difficulty to human civs; always prefers Spiritual leaders and AI leaders whose favorite religion is among those to be founded.

After assigning the same number of religions to everyone, the remainder is assigned to a random subset of civs. In particular, favorite religions don't play a role (except possibly with the choose-religions option).

The top priority is still to give each civ the same number of religions. The above change only applies when that is impossible.

Rationale Religions are hardly shared in games starting in

Religions are hardly shared in games starting in in the Medieval era or later because almost everyone founds a religion. Assigning the religions to civs that like to spread them (Spiritual, favorite religion) should lead to more block-building like in normal games (Ancient start).

Also want to make it more predictable for human players whether they'll get a religion if there aren't enough to go around: On Emperor difficulty or higher, probably not. Otherwise, choosing a Spiritual leader should guarantee a religion.

139	AI evacuation of cities	
AdvCiv		BtS
When a city is very likely to be lost before the next turn, the AI may evacuate some of its combat units from the city. Units that don't receive defensive modifiers usually leave, and dedicated defensive units usually stay. For other units, the tile defense and remaining city defense can make a difference. Won't try to evacuate if the path to safety looks too dangerous. The AI is less willing to abandon major cities than unimportant ones.		
Rationale	improvement. Units with high defens	bonuses and badly injured units seems like a clear sive bonuses can be expected to cause losses to mbered; might, in particular, draw out the
	and settle for peace when the evacu	can't scare away all defenders from several cities, lated defenders gather for a last stand. Sounds ynamics of the game, would make conquests too
	Fixes the " <u>meatgrinder</u> " exploit, whice was discontinued.	ch was still on the BBAI to-do list when the mod
Config	AI_EVACUATION_THRESH in GlobalI	Defines_advc
See also	107 (more offensive Area AI) could h	nelp reclaim evacuated cities.
Reduced Al	trade value for evacuating cities.	The tactical situation does not factor into the Al trade value of a city.

Rationale	The AI should be more willing to give a city away when it thinks that it can't hold onto it, and the recipient (which may or may not be the civ about to conquer the city) should be less willing to pay for such a city.	
See also	122 deals with other changes to city trade value.	
If no city looks safe, idle ships are kept at sea. are used for guarding resources and patrol, the rest is moved into some city even if non safe. Upgrade cities are chosen only based on		threatened by no hostile units at all or by fewer units than the ship's current tile. Some idle ships are used for guarding resources and patrol, but the rest is moved into some city even if none are safe.
See also	In K-Mod, an interaction between a K-Mod and a BBAI change causes idle ships to be stationed in the nearest city regardless of danger. <u>001s</u> deals with that issue and similar ones.	
Rationale	The careless positioning of ships car	n hurt the AI greatly against savvy players.
Tbd.	Should perhaps use a greater maximal range when checking for potential attackers, is currently 3 tiles. Embarked attackers are counted, but could be outside this range (still. able to reach the city).	
		s that the AI isn't at war with, i.e. surprise attacks war is declared. I have <u>some ideas</u> to address
	Rather than just flagging cities as safe or evacuating at the start of a turn, a safety rating should be (pre-)computed.	
		nding, the AI currently loads units into cargo as then the units stay in cargo for several turns.

140	Map-size adjustments (Civ4WorldI	nfo.xml)
See also	When Civilopedia is accessed from the main menu, <u>004y</u> shows numbers that depend on the map size as a range from Duel-size to Huge.	
AdvCiv		BtS
(maxPlotDia maintenance complicated world-wrap (number of ci civs. I.e. the	e map size formula stance) that distance and colony e are based on, using a rather term including map dimensions, (flat/ cylindrical/ toroidal), default ivs, sea level and actual number of more land is available per civ, the stance maintenance per city.	maxPlotDistance is e.g. 55 on Small cylindrical, 72 on Normal cyl., 89 on Large cyl. and 82 on Small flat. That is, the world-wrap type greatly affects distance maintenance.
Small, cylind	10 civs: 71	

Tl	ala effects mission sorts of Coise	
	also affects mission costs of Spies.	
Civ4WorldI maps and in	e maintenance multiplier set in nfo.xml starts at 60% on Duel creases in steps of about 7.5 points to 97% on Huge maps.	50% on Duel, increases in steps of 10 to 100% on Huge.
Rationale	maps or maps without world-wrap.	ive. Empires tend to be circular even on oblong What leads to high distance maintenance is mostly p has lots of space for each civ, civs shouldn't be
		educing distance maintenance; on high difficulty eity maintenance than human civs, and thus the Al intenance reduction.
	the one based on map diameter car	maintenance multiplier in XML; that multiplier and neel each other out to an extent. Usually, BtS I've reduced the step from one map size to the
Tbd.	changed as well. Currently 50% for	ercent in Civ4WorldInfo.xml should be Duel and increases in steps of 5 to 100% for PlotDistance formula, but only partly I think.
government on Normal s (lower max)	nance distance (from nearest center) is now capped at around 25 ettings; lower cap on smaller maps PlotDistance), higher cap on larger maxPlotDistance).	There is an XML parameter MAX_DISTANCE_CITY_MAINTENANCE, but this only serves as a weight on maintenance costs; there is no actual limit on the distance or the cost.
Rationale	If a city is very far away from a gove exactly. The BtS cost punishes (ver	ernment center, it shouldn't matter how far away y) remote colonies too much.
Config	The distance cap is tied to MAX_DISGlobalDefines.xml); changing that	·
Increased te Huge.	ech cost modifiers for Large and	Duel size has 100% tech cost, from there it's +10% for each size level.
Rationale	also trade route profit, though iTradincreased tech costs, tech progress too fast by the Industrial era. If I incl	t makes progress faster on larger maps, perhaps deProfitPercent should counter this. With the is rather too slow in the first three eras, and still rease Industrial-era tech costs through / late game pace becomes too slow on smaller
maintenance	re multiplier for number-of-cities e is 40% on Duel and decreases in 25% on Huge.	45% on Duel, 20% on Huge, steps of 5.
Rationale		be OK if Duel was at 100%; as it is, the ratio e.g. 5%) is too large. Or perhaps it would also work if map, however:
See also	137 changes the default number of	civs per map size.
	units per turn on Duel-size and Tiny Small, Standard and Large, and 4 or	1 on Duel, 2 on Tiny, 3 on Small and Standard, 4 on Large, 5 on Huge.
Reduced the	e number of free bonuses from	5 on Standard, 6 on Large, 7 on Huge.

	nders (Broadway, Rock'n'Roll, by 1 on Standard, Large and Huge	
	ess multiplier 137% on Duel, n steps of 12.5 to 75% on Huge.	150% on Duel, decreasing in steps of 20 to 50% on Huge.
•	multiplier 70% on Duel, decreasing in to 33% on Huge.	80% on Duel, decreasing in steps of 10 to 30% on Huge.
Rationale	As above; don't expect the average larger maps than on smaller ones.	number of cities per civ to be that much higher on
Tbd.	Corporation maintenance decreases 50% on Huge. That's probably not id	rapidly with increasing map size: 400% on Duel, eal.
buildings red Tiny maps, 5 Standard (11	The six national wonders with prerequisite buildings require 4 buildings on Duel-size and Tiny, 5/4 on Small (no change), 6/4 on Standard, 7/4 on Large and 8/4 on Huge, always rounded down. Standard (11/8 rounded up), 6 on Large (12/8) and 7 on Huge (14/8 rounded up).	
Cathedrals and the Statue of Zeus require 3 Temples/ Monuments on Small maps. Consequently, Cathedral and Statue of Zeus, which have a base requirement of 2 buildings, require only 2 buildings on Small maps.		which have a base requirement of 2 buildings,
Rationale	Oxford University is almost indispensable for competing in the Industrial era, and e.g. on a Large map with 11 civs (now the default number), it's difficult to acquire peacefully 7 cities where a University makes sense.	
	The change to Cathedrals and Statue of Zeus is just a side-effect.	
See also	310 gives the Great Wall a (base) requirement of 1 Wall.	
Config	The base numbers of prereq. buildings are set in Civ4BuildingInfos.xml, but I didn't change these. The map-size modifiers are in Civ4WorldInfo.xml. The change to the rounding behavior is in the DLL (CvPlayer.cpp).	
Tbd.	Would prefer abilities that scale with the number of buildings, e.g. "Oxford University: +10-15% research (based on map size) per University up to a maximum of 60%". No required number of buildings necessary then.	

141	No diplo bonus from gifting GP	
AdvCiv	1	K-Mod
Gifting a Great Person (GP) to an AI civ does not affect relations with that AI civ. Like in BtS, only units with positive production cost can boost relations when gifted.		+1 relations for each gifted GP.
Rationale	Too easy to exploit for a diplo victory	/.

Tbd.	Gifted military units should only boost relations when the AI has an immediate need for military aid. The relations bonus should probably also be capped; seems exploitable.
	Comment by karadoc in CvUnit::gift: 'It would nice if there was some way this could also reduce "you refused to help us during war time", and stuff like that. But I think that would probably require some additional AI memory.' I don't think this is worth the effort, but perhaps gifted units should count for "you gave us help" instead of "fair trade".

142	Master gets a happiness bonus only	from the first peace vassal
AdvCiv		BtS
The master of a vassal civ receives a happiness bonus only from voluntary vassals, and only the first one counts, i.e. at most +1.		
Rationale In large games, the stacking happiness bonus, combined with the free luxury resources from vassals, can let master civs ignore happiness altogether. I also don' like that the bonus applies even if just one city is left; this provides an incentive to keep tiny vassals around, which lead to some oddities in global diplomacy (despite efforts to fix such issues). Also, oppression of capitulated vassals is hardly a point of pride. Should perhaps remove the bonus entirely, but for voluntary vassals "We influence other civilizations" makes some sense, and these vassals are harder to get		ster civs ignore happiness altogether. I also don't st one city is left; this provides an incentive to d to some oddities in global diplomacy (despite my ression of capitulated vassals is hardly a point of onus entirely, but for voluntary vassals "We some sense, and these vassals are harder to get.
	The anger at the vassal side seems	sensible (though unimportant) and can't stack.
	-	ee under <u>130v</u>) remove several disadvantages of o, as far as game balance goes, I don't think a

143	Recently-canceled memory for voluntary vassal agreements (VVA)	
If a vassal loses 35% of its territory, it cancels the Only capitulated vassals revolt when losing VVA with a per-turn probability of 15%. Cancels immediately when losing 45%.		
	The vassal can then make peace independently (possibly by capitulating), while the master is justly punished for not having protected its vassal. The third party (possibly human) is faced with a strategic decision: focus attacks on the vassal or the master? In BtS, only attacks on the master can break up the VVA (by lowering the master's power rating).	
Config	VASSAL_DENY_OWN_LOSSES_FACTOR in GlobalDefines_advc.xml	

When a vassal cancels a vassal agreement for no particular reason (i.e. vassal feels safe or powerful enough on its own), the (AI) master remembers this for, on average, 20 turns, and refuses to sign a VVA during that time. When the threshold for a VVA, the agreement can flicker on agreement is canceled because the master hasn't protected the vassal, including the case where a capitulated vassal breaks free after losing too much territory, the vassal remembers this for 30 turns (on average), and refuses another VVA. (Whether the master or the vassal remembers is only relevant when the master is human.)

No memory about canceled vassal agreements. When a capitulated vassal breaks free, it often signs a VVA with the same master on the same turn. When a voluntary vassal is near the power and off every few turns.

Rationale	The flickering isn't only goofy, it also means that war preparations against a form	
	vassal can easily get interrupted by a new VVA, which is frustrating. Also, some	
	mechanism is needed to keep a vassal independent for a while when the master has	
	failed to protected it.	
143b	Cancelation and nukes	

The threshold is randomized; usually, the vassal vassals). doesn't break away until more than half of its cities have been hit. Doesn't cancel if the master has SDI and the vassal does not.

VVA canceled also after being nuked repeatedly. Only lost territory counts (and only for capitulated

Master's SDI protects vassal.

Vassal cancels VVA if it has any nukes unless master has SDI and vassal doesn't: "doing fine on our own."

Capitulated vassals don't build nukes. When a team capitulates, all it's nukes are scrapped. Nukes can't be gifted (between any civs).

SDI is a team project, but doesn't protect vassal teams.

Vassal's nukes factor into its power rating, but a single nuke doesn't usually make a difference.

Vassals don't hold back on anything.

Can gift nukes to circumvent the diplo penalties.

Rationale	SDI is supposed to be an array of space-based lasers. Should be able to intercept any nukes that the SDI owner wants to intercept. Vassals that are powerful enough to build nukes should stand on their own.	
See also	130v makes the master responsible for nukes fired by a capitulated vassal (obsolete now that vassals can't have nukes). 112 cancels VVA when near victory and stops capitulated vassals from pursuing victory.	
Tbd.	A cancelation condition based on present population vs. population when signed might be better.	
	May want to scrap other units upon capitulation too, probabilistically. E.g. when France surrendered to the Third Reich, the French navy was partly scuttled.	

144	Al gift request (part of the <u>DDiplo</u> changes)
	130v exempts vassals from this change and prevents vassals from granting gifts to rivals or to a disliked master. 130o deals with memory about tribute demands. 104m: Some gift requests are triggered during war planning.

AdvCiv		BtS
gift requests That probabi CONTACT_GI and 32% (Si	with a leader-specific probability. ility is based on ContactRand: VE_HELP and between 5% (Gandhi) tting Bull, Montezuma). I'm capping ty at 50% for Tokugawa, otherwise refuse.	The only randomized aspect of the AI response to a gift request is the decay of recent-demand memory: The request is refused if the AI still remembers an earlier request (or tribute demand). So, the first request is handled without randomness, and if a previous request is far enough in the past, it's very likely forgotten (the expected time to forget is 20 turns).
	the player (no change).	CONTACT_GIVE_HELP determines only how frequently an AI leader offers a gift to human civs that have fallen behind.
Rationale		determine reliably if the AI is preparing war. It's granted, then the AI certainly isn't plotting. That xt turn

147	Changes to border tensions	
	004g changes the explanation text from "close borders" to "shared borders". (The formula works a bit differently if 035 is enabled.)	
AdvCiv	BtS	

The number of lost tiles counted per city can be No such per-city limit. A size-1 city enclosed by at most equal to the mean of the city's current foreign borders can contribute 20 lost tiles. The population and its highest-ever population, or at number of lost tiles is then divided by the total most 6, whichever is higher. number of owned tiles and multiplied by a personality factor to compute the diplo penalty from border tensions. Shouldn't get -4 relations from a single city choked city; this can easily happen in BtS, Rationale even in the late game. I generally don't like when high culture leads to painful diplo penalties. This change reduces border tensions a bit overall, and the following change should even that out: When an AI civ steals tiles from a neighbor that There's only a diplo penalty for stealing tiles from the AI civ can't work because they're too far away the AI, not vice versa. from its cities, then the AI civ is slightly upset The weight for stolen tiles is 3. about this. The multiplier for those tiles is 5. whereas the multiplier for tiles stolen from the Al civ is 8. Both weights are multiplied by a percentage based on the size of the AI civ's territory and the map size; this multiplier decreases as more territory is acquired and tends to be near 50% by the end of the Classical era. The weight for the length of the border shared If the border is longer than 7 tiles, a flat penalty of with another civ (no matter if tiles are stolen) is 5.40 is counted. In the end, the total penalty is The result is capped at 40, and no border tiles divided by 100 and multiplied by the AI leader's are counted if the border length is less than 5 CloseBordersAttitudeChange value (between tiles. 1 and 4; no change). Rationale Count unworkable tiles because I don't want change 099b (culture decay in foreign city radii) to reduce border tensions. Should also encourage civs to put at least enough effort into culture to prevent a no man's land that no civ can work (which is implausible at peacetime). Makes sense to me that the AI is annoyed by not being able to work the tiles that it owns and is inclined to remedy this by conquering the cities near those tiles. All the formulas take into account the total size of the territory because, to a civ that has only 2 cities, 4 lost tiles should be a big deal, but not to a civ with 10 cities. I've shifted some weight from the common border penalty to stolen tiles because, when neither side loses tiles, there really shouldn't be much bad blood. The BtS

Tbd.

Perhaps let the relations penalty increase sublinearly with the weighted sum of stolen tiles. Easy enough to do in CvPlayerAI::AI_updateCloseBorderAttitudeCache by e.g. exponentiating iPercent in the end with 0.7 and then times 3, but maybe a penalty of 1 or 2 already happens much more easily than -3 or -4 (this would be the goal).

Stolen tiles with a bonus resouce are counted double.

formula is also too abrupt (0 or 40).

Every stolen tile counts as 1 tile.

Tbd.

Should make the value counted per tile fractional and take into account yields as well. Perhaps there is already a suitable tile evaluation function in the CvCityAI or CvPlayerAI class.

148	Relations to attitude mapping of the	Al changed
AdvCiv		BtS
Pleased, at - change) Frie relations per settings. On humans rece	-2 Annoyed, at -8 Furious, at 10 (no endly. Human players receive no	Pleased at 3, Annoyed at -3, Furious at -10. On Noble difficulty and above, all relations suffer a penalty of -1. On Chieftain, humans get +1 relations from AI civs and on Settler +2.
Rationale	was too much considering that most Pleased and are willing to trade tech great. Apart from this, the main bene	er. A distance of 7 between Pleased and Friendly Al civs are already very unlikely to start a war at a. The additional benefits of Friendly aren't that efit is that the player sees the "A first game. It was a bit silly to tell the player that ion everywhere.

	The <u>Show Hidden Attitude</u> mod mak to the player.	es the BtS relations penalty from difficulty visible
_	ude causes the AI to vote for a victory vote; Pleased is not	+8 relations needed for a victory vote.
Rationale		tory vote, which should still be manageable. More pit of an obscure oddity; much easier to remember
relations (cf. than Prince.	a +0.3 bonus to "first impression" 130b) on difficulty settings lower From Prince to Deity, the bonus om 0.4 to 0.9.	No diplomatic handicaps for human players, though the Al-specific portion of the "first impression" modifier (i.e. from peace weight and warmonger respect) is more often positive than negative.

Rationale	This was a bit of an accident. Until v0.93, I had assumed that the BtS relations penalty (-1) applied only to human-AI relations, and I had meant to replace this with a +1 bonus on AI-AI relations. Now that diplomacy overall is balanced around the inter-AI bonus, I'm finding it a bit difficult to remove it entirely; I don't like when AI leaders are Annoyed at each other from the beginning.
	Relations bonuses from "fair and forthright" trade are generally easier to attain for humans than for the AI, and some relations bonuses tied to AI requests are only available to humans. This is evened out by relations penalties for rejected requests, but not entirely, one could argue. Let's say that the AI bonus makes up for these asymmetries.
See also	250d removes a few minor advantages that the AI receives through the difficulty level.

160	Food after starvation	
AdvCiv		BtS
starvation, the emptied into	the food store of the Granary is the city's food store. 's capacity is only 40% of the city's	Whenever food is added to the city's store, the same amount of food is added to the Granary's store. The maximal capacity of the Granary is 50% of the city's store (whose capacity is 10 + 2 * population). After growth, the Granary's store is added to the city's store, but the store of the Granary isn't emptied. The Granary provides no food after starvation.

Rationale	The Granary already provided some protection against starvation by providing a cushion after growth and helping regrow lost population. However, the cushion is just 15 food in a size-10 city. If such a city has balanced health and can't get extra food by reassigning citizens (the AI often doesn't have unworked Farms), a poisoned water supply will consume the 15 food in two turns, and then kill 6 population. My change essentially doubles the cushion, meaning that only 3 population would be killed, which seems much more reasonable. It's not a big issue for human players, but, in the Industrial era, the AI can become very vulnerable to poisoned water. It's strange that the Granary isn't emptied when a city grows, but normally irrelevant (it would be refilled by the time the city grows again), and actually convenient for my antistarvation mechanism; don't need a separate food store this way.	
	Since the Granary is already considered to be the most powerful building in the game, I didn't want to make it even better; and I had planned to reduce the amount of stored food at some point anyway.	
Config	The capacity change is an XML change (Civ4BuildingInfos.xml).	
Tbd.	Nerf Slavery and Drafting; this will make Granary far less powerful.	
See also	912d: No Slavery option	

161	Probability of war trades check	
AdvCiv		BtS
with a per-turn probability of p for each potential hireling computed as follows: $p(t) = 10 / (DWTR + 10 * min\{10,t\}),$		DeclareWarTradeRand is 40 for all leaders except Pacal, whose DWTR value is 60. Regardless of DWTR, the BtS formulas result in p=1 when the war is 0 turns old. For DWTR=40, p is 1/(t+1) for the next three turns, and, for t=4 to t=10 gradually decreases to 1/40.
Rationale	l'm not sure if the guaranteed check after 0 turns was intended. If so, then perhaps the checks on subsequent turns were made probabilistic only for performance reasons – the number of (hireling, war target) pairs grows quadratically with the number of civs. That said, most of the pairs are usually eliminated by attitude checks (attitude toward the sponsor and toward the target), so I'm not too worried about performance. The BtS probability seems too high to me in the beginning and to low later on. Pacal's value may well be an accident.	

Tbd.	Considering to set leader-specific DWTR values so that some leaders tend to wait and see before bringing in help (DWTR=60), some hardly ever do (DWTR=80 or even 100) and some take all the help they can get asap (DWTR=20). Proud and miserly leaders would get a high DWTR, and profligate leaders a low one. I'm finding it difficult to fit the leaders into these categories though. Tentative:
	3xDWTR=20: Huayna Capac, Louis, Justinian 11xDWTR=40: Hannibal, Suryavarman, Mansa Musa, Hatshepsut, Hammurabi, Montezuma, Saladin, Churchill, De Gaulle, Roosevelt, Augustus Caesar 14xDWTR=50: Cyrus, Brennus, Julius Caesar, Willem, Pericles, Pacal, Catherine, Washington, Joao, Boudica, Frederick, Bismarck, Wang Kon, Peter 6xDWTR=80: Alexander, Shaka, Genghis Khan, Qin Shi Huang, Gandhi, Kublai Khan, 2xDWTR=100: Tokugawa, Sitting Bull 16xDWTR=60: the rest

170	(Reserved for an overhaul of religion)	
170a	Diplomacy	
See also	145 applies accepted-religion memory only so long as the religion is shared. 115b changes how a favorite religion affects the utility of the Theocracy civic. 150a: religions in replays 106e, 151: notifications about religions 131: Al switches its state religion probabilistically	
AdvCiv	BtS	
Rationale		

171	Founding of religions by the Al	
Tbd.	Al shouldn't found religions before founding a second city or hitting the happiness cap in the capital. Al with a favorite religion should avoid founding earlier religions.	
AdvCiv	dvCiv BtS	
to found ("C the favorite none speci	When an AI leader gets to choose which religion chooses uniformly at random. Chooses uniformly at random.	
Rationale	If the preference of the leader can't be matched, at least try to match the game year by picking religions in chronological order.	

178	Changes to Apostolic Palace (AP) and United Nations (UN) votes
	dlph.25 allows AP war votes against voting members. 130f allows embargo votes to sever recent deals.

Tbd.	Several gameplay changes, most importantly to the membership rules. The only thing done so far (apart from dlph.25): A temporary adjustment of the City AI evaluation of the AP as a vote source. Assigns 0 value when the state religion is shared by no other civ. Will have to replace that with code estimating the potential for spreading the AP religion after/ while building the AP. (Don't want to force an AI civ that has just founded Christianity to spread that religion around before being allowed to build the AP.) Some players really hate the AP victory. The change to the membership rules will address this.		
See also	115b only counts vote source utility when aiming at a religious victory; that'll also have to change.		
AdvCiv		BtS	
UN and AP don't require Diplo victory to be enabled, but the victory votes do.		Can't build AP and UN when Diplo victory is disabled.	
Rationale	The AI can handle this. Disabling Diplo victory without disabling all votes is requested on the CFC forums from time to time (two examples). Seems like players generally don't dislike voting, just the victory votes, either for reasons of game balance/ fairness (mostly AP) or because they find it irrational that the AI civs will vote for a rival's victory. That said, some non-victory AP votes appear to be problematic in multiplayer (the RtR mod disables them; see under "Miscellaneous" here); will have to disable them through XML then.		
Config	Can be reverted through <code>Civ4BuildingInfos.xml</code> . Individual votes can be disabled through <code>Civ4VoteInfos.xml</code> (though this may break savegame compatibility).		
The "None" option in the popup that asks the player to select a resolution explains that this will trigger an early election. (Unless the vote cycle is ending either way.)			
Rationale	The early-election mechanism is Ok	, but needs to be communicated to the player.	

179	Changes to the production ability of Apostolic Palace (AP)	
AdvCiv		BtS
shown in the AP's help text, Civilopedia text and actual-effects text (<alt> key).</alt>		The only mention of the production bonus is buried in the "BtS Concepts" page about the Apostolic Palace. Actual-effects (BUG mod) shows the bonus when hovering over religious buildings, but not when hovering over the AP.
production bonus, taking into account religious buildings that already exist and that could still be		The production bonus is ignored by the BtS AI. There is BBAI code that factors the bonus into the evaluation of religious buildings, but not the evaluation of the AP itself.
Rationale	The ability is quite powerful; shouldn't be a secret. It's tied to the AP vote source (Civ4VoteSourceInfos.xml), not the building, but that's a technicality that players shouldn't have to worry about.	
Tbd.	Reduce the production bonus to 1 and give religious buildings +1 production from a trait once/ if I get around to revising the leader traits.	

See also	008a shows some of the restrictions for AP only when they apply.	
	008e drops the "The" from the AP's name.	

200	Reverted K-Mod changes; see chapter on <u>K-Mod</u>		
Tbd.	Rebalance culture victory. Something to make up for the halved culture bonus from Free Speech. (K-Mod gives Colosseum +20% culture, but I don't like that; <i>ludi</i> should be happiness, not culture.)		
201	Play "you have discovered" sound in multiplayer		
AdvCiv/ BtS K-Mod			
	Play a "you have discovered" sound when a tech Always play the tech quote. is discovered by a teammate.		
Rationale	A bit of a pity never to use the "you have discovered" audio. Should also be slightly more informative to use different sounds for own discoveries and those of team members.		
Tbd.	Not tested.		

210	Additional Civ4lerts		
See also	135b makes MoreCiv4lerts work in Hotseat 106c prevents Civ4lerts from triggering after loading a savegame 106d changes the default settings for BUG alerts and disables some alert triggers. 127 suspends alert updates during AI Auto Play		
huge. Inste	ling a second Alert tab to the BUG menu for the new alerts – the BUG menu is already ead, I'm removing BUG alerts to make room; some aren't really useful in a mod like ners are made obsolete by the new alerts.		
Tbd.	Get rid of the "willing to sign Open Borders" alert. Instead simply have the AI contact humans right away when it becomes willing (the turn on which a human discovers Writing will need special treatment). Also remove the "peace treaty" alert; "willing to talk" is enough. And remove "pending border expansion".		
	" <team1> has signed canceled Open Borders with <team2>."</team2></team1>		
"You have gained lost access to a source of <bonus> (now <n> sources)." "The peace treaty between <team1> and <team2> has ended." "<team1> is willing to make peace with <team2>." "Can now no longer access demographics about <civ>."</civ></team2></team1></team2></team1></n></bonus>			
			" <team1> has discovered <tech> [(trade from <team2>)]. [Obsoleted wonders:]"</team2></tech></team1>
			" <team1> is willing to stop trading with <team2>." (But what about embargoes that the AI would agree to if the player didn't have any deals with the target?)</team2></team1>
			"5 turns have passed since the last revolution; it's again possible to change civics."
	" <leader> can be convinced to convert to <religion>."</religion></leader>		
	"The enemy has been spotted near <city>." (Currently, the game reports the same enemy time and again; should work better as a Civ4lert that remembers which enemy units had already been visible on the previous turn.)</city>		

	and possibly: "A tile near <city1> has flipped to <city2>." (How to describe the tile?) "<leader1> is now [e.g.]furious toward y (was annoyed)." "<leader> has constructed a <building> the <national wonder=""> in <city>." (cf. 045) "You <leader> have has overtaken <leader> you in military power." "The military power of <leader> has increased substantially over the last 10 turns." (probably too noisy) "The effect of our counterespionage mission against <leader> has ended." (A message about enemy counterespionage ending would be difficult because we only learn that "enemy spies appear to be extra vigilant to our espionage efforts," but not whose spies, and the durations can overlap.) "<leader> has acquired the <wonder> of <city>." (The Tbd. under 106 would be preferable, but an alert that is checked at the end of turn would be easier to implement.)</city></wonder></leader></leader></leader></leader></leader></city></national></building></leader></leader1></city2></city1>		
210a	War trades (= hired war/sponsored v	var/joint war)	
See also	implemented the alert for AdvCiv.	uch an alert, but I didn't know this when I	
	<u>UWAI</u> uses a different procedure than BtS/ K-Mod to decide whether to entertain join war offers (but this alerts works in any case).		
	152 shows currently offered war trac		
AdvCiv		BUG/ K-Mod	
Triggers when an AI civ becomes willing to declare war on another civ at the player's request.		No alert about this, but BUG shows a fist icon on the scoreboard when a civ is unwilling to declare war on account of "having too much on [their] hands." Prior to v1.46, K-Mod did not show this	
tab; enabled	•	icon (not even as an option). K-Mod 1.46 reverts to the BUG behavior (icon enabled by default).	
	Removed the "Victory" alerts to make room.		
Rationale	The K-Mod 1.45 approach (no UI support for joint wars) certainly wasn't ideal, and bothered some players <u>greatly</u> . The fist icon is a bit obscure, takes up room on the main interface, and the player has to have an eye on it every turn; an alert is much better.		
	The victory alerts seem useful only i	n HoF games.	
Config	Can also show an alert when the AI stops being willing to declare war: ALERT_ON_NO_LONGER_WAR_TRADE in GlobalDefines_advc.xml.		
UWAI rejects war trades when already in a war and the new target is not at war with the sponsor and farther away than the closest current war enemy: "We have enough on our hands right now." Al refuses war trades when it is in any war, regardless of other circumstances. (This is still the case when UWAI is disabled.)			
Rationale		ages produced by this alert. War against an ; the hired AI civ isn't going to send units.	
210b	Revolts		
to greater tha	en revolt probability changes from 0 an 0 in a city, or when occupation est or revolt) ends in a city unless the ds orders.	The Pacification alentinggers when occupation	
-	ends in a city; the pending version when shown in the "City" column, taking the spot if the occupation is about to end. Without the alert,		

	cation/ Pending" alert. the alert also triggered when the e became 0.	there is no notification about ending occupation, although a conquered city will ask for production orders when occupation ends (unless the new owner has already put something in the queue).
Rationale Now that revolts play a more prominent role (see <u>099c</u>), an alert Pacification alert seems fairly unimportant to me, but I've still inc alert. Though not the "pending" option; I don't see why one woul		ortant to me, but I've still included it with the new
	No pacification alert when the city al	so needs orders; seems superfluous then.
210c	City founded alert removed	
revealed to t message ab disable this.	When a foreign city is founded in a tile that is revealed to the player, the game shows a message about this to the player. No option to disable this. No messages about cities founded in unrevealed tiles. The description says that the alert is triggered when "a rival founds a city," but I think it also works for vassal cities (which aren't rivals). K-Mod prevented the alert from showing cities founded in unrevealed tiles and set it to disable by default.	
	AdvCiv sticks with the K-Mod principle that unrevealed cities should be secret. No need for an optional alert then. Frees up space for a new alert (see <i>Tbd</i> . under 210).	
210d	Third-party resource trades	
strategic res	Triggers when a civ starts or stops trading a strategic resource to another civ, and when a civ be looked up on the Foreign Advisor screen.	
starts trading any resource to a civ that it was previously not trading any resources to, or when the only resource trade between two civs is canceled.		The BUG Resource Trade alert triggers when an AI civ becomes willing to trade a resource to the player or stops being willing (106 disables the latter part).
Rationale	Was helpful for testing <u>036</u> . Triggers way too often when all started and ended resource trades are reported. Reporting only strategic resources and the first and last trade is OK, but not quite as interesting as I thought it would be.	
Config	Disabled by default. Can be enabled from the BUG menu, Alerts tab, column Trading. There's also a debug mode for reporting all resource trades, but that can only be enabled in the DLL (AdvCiv4lerts.cpp).	
Tbd.	Perhaps this alert should only cover complicated.	strategic resources; the current scope is a bit
	A "third party" checkbox for an alert about inter-AI tech trades (cf. <i>Tbd.</i> under 210) could be placed in the same column of the BUG menu.	

210 e	AI willing to import from human	
The resource trade alert (enabled by default) triggers also when an AI civ becomes willing to import a surplus resource from the player at a price of at least 3 gold per turn. The alert only checks AI willingness to export resources.		
by one of the	ger when the resource is consumed e player's corporations, nor when an being willing to import a resource.	
See also	Such an alert wasn't necessary prior to <u>036</u> because the AI was always willing to import human surplus resources.	
	106: The alert doesn't trigger when the AI stops being willing to export a resource.	

250	Changes to handicaps		
See also	104p sets the target size for AI invasion stacks based on difficulty. 126 deals with free AI techs when starting in a later era. 113 reduces the AI Worker speed bonus. 108b increases the bias toward better starting locations for the AI. 313 gives human units an anti-Barbarian bonus on Monarch, Emperor and Immortal, and reduces human and AI bonuses against animals.		
250a	King handicap		
advantage (the worst sta Al advantag	arting plots), and moderate ongoing es (akin to Monarch).	Initial AI advantage and ongoing advantages go hand in hand for the 9 BtS difficulty settings.	
difficulty rati explicitly thre Immortal at and King at	Uncoupled difficulty rating from handicap id. A difficulty rating from 0 to 100 is now assigned explicitly through a new XML tag. Settler to mmortal at difficulty 0, 10, 20,, 70; Deity at 90 and King at 65. Plus another 30 when playing a Dine City Challenge. Handicap ids from 0 (Settler) to 8 (Deity) are used as a measure of difficulty, e.g. when computing player scores at the end of a game. This method breaks when handicap settings are added. If added at the end of Civ4Handicap Info.xml, it's treated as more difficult than Deit if added in the middle, all the handicaps below increase in difficulty.		
Rationale	for Pottery: Free tech from the first row (e.g. Hunting or Agriculture) puts those AI civs at a disadvantage that always start with these techs. Pottery should also put the AI on a path to long-term development (Granaries, Cottages), rather than using its initial advantage to choke the human players.		
Config	I've removed this difficulty level in v0.90. Monarch combined with SPaH has a pretty similar result, and I wanted to reduce the complexity of the AdvCiv mod, at least on the surface. (An additional difficulty level is a very visible change from BtS.)		
	To re-enable the King difficulty, remove the comment tags around the last <handicapinfo> entry in Civ4HandicapInfo.xml. This should also allow savegames with King difficulty to be loaded.</handicapinfo>		
Tbd.	The victory score should take into account other game settings (through difficulty or directly), e.g. Always War.		
See also	108 allows the game to give the worst starting plot to a human civ. dlph.22 rounds the difficulty setting in multiplayer to the integer nearest to the average.		
250b	SPaH; see also chapter Start Points as Handicap.		

Config in	Since v3.17 (reportedly), the Base Points box is grayed out on the Custom Scenario	
scenarios	screen unless Advanced Start is set as a default option by the scenario. As a consequence, Advanced Start and SPaH (which builds on Advanced Start) are unavailable in most scenarios. I haven't found a way to work around this. However, it's easy to add Advanced Start as a default option in a scenario file: Locate the file in Sid Meier's Civilization 4\Beyond the Sword\PublicMaps (CivBeyondSwordWBSaves) or Sid Meier's Civilization 4\PublicMaps (Civ4WorldBuilderSaves). This also works for EuroWorld.CivBeyondSwordWBSave . Open it file in a text editor. (Or better make a backup copy first.) Somewhere between BeginGame and EndGame, add this line: Option=GAMEOPTION_ADVANCED_START	
See also	<u>Chapter</u> Start Points as Handicap	
	Advanced Rivals mod, precursor of Advanced Civ	
Tbd.	Allow players to enter arbitrary point distributions, in particular ones that assign start points to human players. Obstacles:	
	• Can't add a drop-down menu for this to the Custom Game screen; if it's done ingame, it will have to happen after game start. For multiplayer, it's not clear who should enter the points; and they'd have to be explicitly synchronized.	
	• I've tried an XML file, but that doesn't work well for multiplayer – not clear to the players if they should all use the same XML file, or if XML data of the host will be synchronized with the others. I'd rather avoid using XML for custom game settings.	
	Caveat: Code added in CvPlayer.cpp assumes that only AI civs can have Advanced Start when SPaH is enabled.	
The new SP moves to the	aH option takes the spot of No City Razing (NCR) on the Custom Game screen; NCR bottom.	
SPaH can't Scenario scr	be used in scenarios because the Base Points box isn't available on the Custom reen.	
See also	250c changes the default start points on the Custom Game screen, and increases the start turn based on the number of start points.	
Tbd.	Not sure if the default start points are appropriate for later-era starts.	
SPaH suppr start points.	esses the difficulty adjustment of AI	
	no free wins against Barbarians and I production when SPaH or R&F is Barbarian unit (regardless of Advanced Start). On all difficulty settings, the AI receives some free production (akin to a chopped Forest) in its capital.	
Rationale	When playing with SPaH, any free initial items and any AI head start in terms of initial items should be covered by the start points configured for the AI.	
The free win is also a kind of free item. More importantly, advanced players nwant to combine a medium difficulty setting like Prince with a big AI head state the R&F option), and those players might find the free win cheesy.		
See also	<u>250c</u> disables free AI tech from difficulty setting when using (any) Advanced Start option.	

(Just restating what's already described in the SPaH <u>chapter</u>)

SPaH gives the human civs normal starts with e.g. a Settler and Warrior/ Scout in the Ancient era, and Advanced Starts to the AI. If less than 10000 start points are entered, all AI civs get the same number of points (flat distribution). Otherwise, if a 5- or 6-digit number is entered, the AI civs receive unequal amounts of points. The first 4 digits determine the max number of points. This is assigned to the AI civ in the bottommost slot. The last two digits are interpreted as a percentage of the max. The resulting min number is for the AI civ in the topmost slot. The others receive values in between min and max, linearly distributed and slightly randomized.

There is no SPaH option; all civs, human and AI, receive the same number of start points.

The AI start points can be reviewed on the Settings tab of the Victory Screen.

Tbd.

The unequal distribution is linear between max and min, but also based on pairs that tend to have similar point values. Originally, this was supposed to make the assignment of start plots easier. The human civ and the bottommost AI civ were placed first, and the other civs were evenly distributed in between. This doesn't generalize well for multiplayer, so I've abandoned it. Given the current start-plot assignment algorithm, it would be conceptually simpler to use a linear distribution without pairs.

Config

The randomization of start points is configurable in Global Defines advc.xml.

specifically, the difficulty factor, normally between 0 and 90 (see 250a), is increased based on the start point distribution. For example, a Noble game has normally a difficulty of 30; with 1000 start points for every AI civ, that difficulty is increased by 20, which results in the same score as a Monarch game without SPaH.

SPaH is factored into the game-end score. More Game-end score doesn't account for Advanced specifically, the difficulty factor, normally between Start.

Rationale

The end-score function has numerous issues, but I think players still care about it a little bit as a rough indicator of how well they did. So, the formula doesn't have to be perfect, but, if start points work as a handicap, they should be accounted for somehow.

I haven't thought about scoring in multiplayer games – not important enough to worry about.

250c

Changes to (regular) Advanced Start

AdvCiv

BtS

No impact of points.	of difficulty setting on the human start	Extra start points for human civs on low difficulty settings (150% on Settler), reduced start points on high difficulty (75% on Deity).
Prince 125% Monarch 145% Emperor 175% Immortal 210% Deity 270%		Set to 110% 120% 135% 150% 170% but aren't applied because of a bug.
Rationale	human civs fewer points on higher d	iers that affect start points. Instead of giving lifficulty settings and AI civs more, I'm giving the AI int for the free AI tech that is no longer granted in
	The higher amount of start points for an increased point cost for units, but	r human civs on Prince and above is countered by ildings and cities (see below).
the technologin the Class	al items in Advanced Start except for ogies of previous eras when starting sical era or later and civ-specific teching in the Ancient era.	No free units, but free technologies from the difficulty setting are granted in addition to start points.
Rationale		ntly than free units. Obviously, free tech from my solution isn't entirely consistent either.
Charge 1.5 buildings, c	start points per production (units, ities).	The ratio is 1 for 1. 1 Food (population) costs 1.5 start points though.
1.5 start po	ints per 1 culture.	1 culture costs 2.5 start points.
every 25 re reveals at l	a tile costs 1 start point plus 1 per vealed tiles. Advanced Start normally east 50 tiles upfront. Although AdvCiv int these fully, the cost normally starts	2 * (100 + 3 * number of revealed tiles) / 100 rounded down, i.e. 5 initially.
Can't revea Coast.	l Ocean tiles that aren't adjacent to	Can reveal any tile that isn't adjacent to a previously revealed tile (no change).
Start point or reduced to	cost for routes and improvements 67%.	E.g. a Mine costs 24 start points, a Farm 30.
Techs cost change).	1 start point per research point (no	

Rationale Units seemed extremely cheap compared with tech. It's not that dangerous because units can only be placed in cities, and each city has a limit of two military units: still. makes lots of Workers and Settlers a too obvious choice. 1 start point essentially corresponds to 1 gold, so 1.5 per 1 production is still a bargain. Should perhaps be 2 for 1 – not sure if there's a good reason to make techs relatively unattractive during Advanced Start. Similarly, 1 revealed tile per 2 start points is still pretty expensive; seems better to buy Settlers and found later than to pay some 50 points extra for revealing the surroundings of a potential city site. A Mine for 24 is too expensive when a Worker costs 60. Now Workers are at 90 and Mines at 16. With cheaper visibility, it could make sense to reveal a diagonal across the entire map under the BtS rules. That would spoil all the surprises, so I'm prohibiting the oceans from being revealed. 2 culture per 3 start points is still expensive – except for the first border pop, which I don't want to turn into a complete no-brainer. Config Costs for culture, revealed tiles and Worker builds are set in GlobalDefines advc.xml. Start points shown on the Custom Game screen Shown points are adjusted to game era, game are only auto-adjusted to match the start era. speed (silently) and world size. The impact of world size is minor; the multiplier is between 80% All start point costs are reduced based on game and 120%. speed. Rationale A large world isn't necessarily less crowded than a small one. The BtS autoadjustment is generally problematic because it overwrites any start point value that the player may have already entered. Also gets in the way of 250b – don't want the player handicap to increase with the world size. The silent game speed adjustment can be a bit confusing – the player ends up with a start point budget that differs from the value shown on the Custom Game screen. I think it's a bit more elegant to change the costs instead. Makes no functional difference (apart from rounding). Dawn-of-Man Screen always shown. The "since Dawn-of-Man only shown for normal start, i.e. time immemorial" text and initial techs are only non-Advanced in the Ancient era. shown when starting in the Ancient era. While in Advanced Start, players can only infer While in Advanced Start, scoreboard help text their leader from the text color or by using shows the player's leader.

keyboard shortcuts to access Advisor Screens or Civ Description (Alt+D).

Rationale

Players need to know their civ and leader upfront, especially if it was set to Random on the Custom Game screen.

The initial techs are meaningless when starting in a later era.

The start turn is based on the number of start points, more specifically, the maximum and the mean of the start point distribution. Only applies when starting in the Ancient era (and only when the average of mean and maximum is greater than 500).

Example: If everyone receives 750 points (max=mean=750) on Normal speed, Emperor difficulty, then the start turn is 20, i.e. 1880 B.C. The start turn only depends on the start era.

through Advanced Start. Rationale Perhaps the free food was supposed to make Granary useful in Advanced Start? B then the cost for increasing population should also be based on the present food st (and it isn't). Anyway, the rule is too obscure; no one expects free food when addin population. If adding population isn't powerful enough, one could always adjust ADVANCED_START_POPULATION_COST, but 1.5 points per 1 food seems fine now that production also costs 1.5 points. Credits DarkLunaPhantom (Git commit) The Imperialistic trait reduces the point cost for placing cities except for the first city. The Imperialistic trait reduces the point cost for placing cities except for the first city. When not in Advanced Start, half of the city's food store ge filled. 0 food in newly placed cities. The Imperialistic trait reduces the point cost for placing cities except for the first city. The Imperialistic trait reduces the point cost for placing cities except for the first city. The Imperialistic trait reduces the point cost for place at least one city before they can buy Settlers. When not in Advanced Start, half of the city's food store ge filled. 0 food in newly place at least on the present food only in the cation only increases the production invested in Settlers, but not for cities. Civs are forced to place at least one city before they can buy Settlers. When not in Advanced Start, the Imperialistic in Settlers, but not for cities. Civs are forced to place at least one city before they can buy Settlers. When not in Advanced Start, the Imperialistic in Settlers, not food. Thus, the production bonus closer to 25% in the early game than to 50%. Rationale Inconsistent to apply the bonus to Settlers and not to cities. No bonus for the first city because in non-Advanced Start and not to cities. No bonus for the first city because Imperialistic is a fairly weak trait, and, at some point, I intend to change its ability and the Expansive trait bonus to Workers so that they also apply to invested food. Credits	Rationale	Should match the historical time line better, and, in the case of SPaH, gives the impression that some of the AI civs have been on the map since 4000 BC, whereas the human civs are late arrivals.		
### Advanced Start, half of the city's food store ge filled. 0 food in newly placed cities. #### Rationale Perhaps the free food was supposed to make Granary useful in Advanced Start? 	Tbd.	Afforess makes some other changes in the Advanced Start AI code. I think these are mostly for dealing with very high numbers of start points, say, more than 10000. A lot of magic numbers in his code that would probably have to be adjusted to AdvCiv.		

2	50d	Al unit supply and upgrade cost not affected by game era		
d s	ifficulty setti	ngs, namely the discounts on unit pgrade cost, are unaffected by the	The per-era modifier increases most of the AI advantages with each passing era.	

Rationale	I wanted to apply the AI supply cost modifier to the gold paid for Pacifism (change 912b). The era progression complicates this. And perhaps AI upgrades also happen a bit too swiftly in the late game on Emperor and above.		
	It's also conceptually simpler to have these two AI modifiers apply regardless of difficulty, i.e. also regardless of the per-era modifier (which does depend on difficulty). Look at them as an acknowledgement that the AI needs to have far more units than a human player in order to guard its cities.		
250e	Fewer free AI Scouts		
-	On Emperor difficulty, the AI starts with 1 free Same, but 2 Scouts. Scout, 2 Archers and 10 overflow production.		
Rationale	To make Scouts more attractive for human civs; especially the initial Scout from Hunting. One Scout and one Archer (and possibly soon one Warrior if the AI uses its free production for that) is still plenty, but should leave some goody huts to humans that start with a Scout.		
	Also note that, on Monarch, most AI civs don't start with Hunting and thus get 0 free Scouts. 0 to 2 is quite a jump when going from Monarch to Emperor.		
See also	The <u>table</u> in the chapter about the SPaH option lists the AI freebies for each difficulty setting.		

251	Start turn and AI tech costs based on difficulty	
AdvCiv		BtS
Al tech costs are reduced on the lowest four difficulty settings, and increased on the highest three. I've adjusted the human tech cost modifiers for these seven difficulty settings so that the ratio between human and Al tech costs remains approximately as in BtS.		Al tech costs are not affected by difficulty. Human tech costs are reduced to 60 (Settler) to 90% (Warlord) on difficulties below Noble, and increased to 110 (Prince) to 130% (Deity) on difficulties above Noble.
Rationale	The overall progress had been too fast on difficulties above Monarch and too slow on difficulties below Prince. It's an aesthetic issue (AI tech matching game date), but also a matter of pace: How much time there is for warfare until another tech is discovered. I don't think, say, Warlord and Immortal should have fundamentally different pace (that's what the game speed setting is for).	
	karadoc seems to have thought so too; in K-Mod <u>1.45</u> , he tied inflation to the globatechnological progress. I don't like this solution; see the discussion <u>here</u> .	
		mething similar to my change ("tech costs for all 'Bitbucket link). And Caveman to Cosmos also le top).
Config	Civ4HandicapInfos.xml. To undo the change, one can set (for each difficulty) AIResearchPercent to 100 there, and reset ResearchPercent to the respective original value.	
Tbd.	Perhaps AIPerEraModifier should apply to AIResearchPercent; then AI research would become faster as the game progresses. Already the case for AI expenses for civics and units, so maybe that's enough (as far as commerce is concerned); I worry that the total effect of the progressive bonuses would become too noticeable. If I do make this change, higher AIResearchPercent values should be set, so that the overall AI research speed stays the same.	

Even without AI research getting faster with each era, the Deity AI gets ahead of the historical time line by the Industrial era. I think a further increase of tech costs (already 150% for the human player and 125& for the AI) would make buildings and units too cheap in comparison. Would have to change the mapping from turn number to year instead. Won't do that because I don't care that much about Deity; with a few more (fundamental) balance changes, Immortal should become hard enough for everyone. On a related note about the per-era modifiers: It's not ideal that the bonuses are triggered (entirely) by the tech era of the AI civ that receives the bonus; it means that the AI civ that is first to reach a new era is also the first to benefit from the bonus. Could be the main reason why some AI civs get so far ahead of others technologically in Deity games. Using the game era would also be problematic because of possible human manipulation, and any average would be distorted by vassals/ small civs. Just base it on the game turn? AITrainPercent should get the same treatment as AIResearchPercent in order to reduce overcrowding of the map in high-difficulty games. See also 910 adjusts the per-era tech modifiers (which apply to everyone, not just the AI). The start turn is advanced by 10 (on Normal speed) for every free Worker or Settler (beyond the first) that the AI receives. This only applies when playing without Advanced Start (about the start turn in Advanced Start, see 250c). Config INCREASE_START_TURN in GlobalDefines_advc

(Disabled) When playing with Raging Barbarians The game never tells the player on which turn (RB), the Barbarian start turn is shown on the Settings tab of the Victory Screen.

Barbarians start appearing.

Rationale

When starting in a later era or using SPaH, the game doesn't start on turn 0, and it's difficult to tell how many turns have passed.

Update (v0.94): Not crucial to know because even Raging Barbarians start appearing gradually. And after the turn on which Barbarians could theoretically first appear (based on the difficulty setting), it may take another 10 or 20 turns until a unit actually enters visibility, so the turn number can be misleading.

When computing the target number of Barbarian All land tiles count equally, and water tiles count land units and cities per continent, tiles with 0 food yield are disregarded. Coastal water tiles count half.

only for sea units.

Barbarian units can't appear on tiles with 0 food yield. On tiles with a yield sum of 1, in particular Jungle and Tundra, Barbarians are less likely to appear than on tiles with higher yields. I'm computing the yield sum twice, once including and once excluding features, and take the minimum. This way, all Tundra except Tundra Hill Forest and River Tundra gets fewer Barbarians.

Yields have no impact on Barbarian unit placement.

Civ units only prevent Barbarians from appearing Barbarians can't appear in a 5x5-tile square on visible tiles.

surrounding each civ unit ("fogbusting" range). Visibility practically doesn't matter.

Animals only appear on tiles with a positive food vield or freshwater.

A passable tile not visible to any civ is chosen at random, then an animal suitable for that tile's terrain is chosen.

Rationale

Want Barbarians to work as a corrective for starting positions that have much room for expansion. To this end, fogbusting needs to be nerfed, and decent tiles need to be distinguished from bad tiles.

It's also rather implausible that large numbers of Barbarians would appear in the polar region or desert. The early civilizations were frequently raided by pastoralists from marginal (but not desertic) lands, which is why I'm not distinguishing between e.g. Plains, Grassland and Flood Plains.

Animals: A problem in Earth scenarios; the Sahara gets filled up with Lions. One could look at this as a representation of the harsh conditions there, making the desert difficult to explore, but, ultimately, the lion-filled Sahara looks too silly, and the Sahara lions prevent animals from spawning elsewhere.

Barbarian creation rate adjusted to game speed. Creation rate and target number are independent The target number of Barbarians per continent (upper bound) remains independent of game speed. Barbarians start appearing roughly in the same year for all speed settings.

of game speed. Barbarians start appearing later on slower settings.

No Barbarian units are created on continents without civ cities (nor in the surrounding waters), but Barbarian cities appear earlier on such continents and more densely than in BtS. If a continent (or shelf) becomes very densely populated with Barbarian units, the game starts culling them. The greater the density, the higher		Plenty of Barbarian units are created on continents without cities because these continents have 100% unowned tiles. While Barbarian units are created independently for each continent, cities are placed globally, and the game prefers to place them on continents with civ cities.

301	Early Spearman fix, no spawning of units older than the previous era	
	1	

The game creates Barbarian units with resource The tech for building the proper improvement requirements only once the Barbarians have the suffices, i.e. Mining for Spearman. tech that allows that resource to be traded. This only affects Spearman, which now requires Bronze Working. Moreover, Barbarian units requiring a resource The same Barbarian units appear on all can only appear on continents where at least one continents, and the game only checks if the civ has access to that resource (or where a Barbarians could work the necessary resources, Barbarian city has access to it). not if they're actually available anywhere. Early Barbarian Spearmen were probably not intended by the BtS developers. The Rationale Bronze Working requirement should make Chariots more useful against Raging Barbarians. Barbarian access to resources that don't exist on a continent is highly implausible. It's also a game balance problem when starting in the Classial or Medieval era. In BtS, the Barbarians then immediately get horse, bronze and iron units while it usually takes the AI civs some 50 turns to hook up a military resource. The game only creates Barbarian units from the The unit to be created is chosen uniformly at Barbarians' current tech era or the previous era. random from among the allowed units, including i.e. no Warriors and Archers in the Medieval era. those from all earlier eras. Obsoletion isn't Spearman is treated as a Classical-era unit checked. because of its resource requirement. Ancient Barbarian units become a pointless distraction at some point. Rationale 302 Tech diffusion only from civs sharing an area with Barbarians Barbarians get research only from civs they Barbarians receive research based on the ratio of share a landmass with. The specific conditions civs alive that have a given tech to the total (for a shared landmass) change as the game number of civs alive. progresses. For the first 100 turns, any Barbarian land unit on a landmass with a civ city suffices (or a ship on the surrounding coast), later on, a single Barbarian city isn't necessarily enough. See CvTeam.cpp for details. The intention is that research of New World Barbarians stops once they're driven out of the Old World. Update (v0.93): Barbarian research is now only slowed down when they don't share a landmass with a civ. (Because Longbowman is arguably a better representation of American Indians than Archer.) Rationale Want the research of New World Barbarians to stop once they're (nearly) eliminated in the Old World. That way, the New World will usually only have Classical-era Barbarian units, and occasionally Medieval. See also 300: Barbarian aggressiveness now escalates based only on local cities (not those on other landmasses) Tbd. If I really want New World Barbarians to have Longbows, I could give Barbarians more original research capacity (they already have a little, maybe by accident) and give the Barbarian leader a flavor value that matches the flavor of Feudalism.

Never build culture, can't build cultural buidings, found value considers only inner ring

307	Post-Medieval Barbarians		

Barbarian units can be created by the game in all Can only receive and train Warrior, Archer, eras. Barbarians can receive and train Spearman, Axeman, Swordsman, Horse Archer, Musketman, Cavalry, Anti-Tank and SAM-Longbow, Maceman, Galley, No Barbarian units Infantry. created by the game in Renaissance and Cannot train Rifleman, Grenadier, Paratrooper, beyond. Can train Rifleman, Grenadier and Frigate. As of **v0.94**, Musketman is the only post- Frigate. Medieval unit that Barbarians can receive or train. Barbarians can't receive cities in Renaissance Barbarian cities still appear in the Industrial era. and beyond. Starting from Renaissance, Barbarian research In BtS, Barbarian research always ignores tech ignores tech prerequisites. preregs, i.e. Barbarians can research e.g. Pottery and the Wheel simultaneously. K-Mod has The Raging Barbarians option creates more changed this, so that Barbarians only make Barbarian units in later eras: the tiles-per-unit progress on techs that they could research if they divisor is reduced to 60% in the Ancient era, were a civ. Renaissance, 30% in Industrial, 22.5% in Modern and 15% in Future (relative to the divisor without RB). Rationale Gunpowder units mostly for Terra and similar maps – on normal maps, there is typically no land left for post-Medieval Barbarians to appear on. Therefore the reduced divisor for later eras with RB; so that RB players get to see the occasional post-Medieval Barbarian. Muskets are supposed to represent natives that have acquired firearms (through trade or as spoils). Until v0.94, Barbarian Cavalry and (as a fairly ineffective type of infantry) Anti-Tank and SAM were also allowed. I'm reverting this because Cavalry practically never appears (requires a local Horse resource to train), and because advanced weapons like bazookas and MANPADS are jarring in the hands of the Barbarians. Would have to create custom units for the Barbarians to represent adequately e.g. mounted post-Columbian Amerindians or Daesh insurgents. Don't want Barbarians with firearms to be on par with properly trained armies, hence no Rifle, Grenadier and Frigate. No Pikeman: Two Medieval Barbarian units (Longbow, Mace) are enough, and I want mounted units to be effective against Barbarians, especially Cuirs/ Conquistadores. Barbarian research ignoring tech prereqs allows Barbarians to catch up quickly once colonies are founded. By the time New World Barbarians turn aggressive, they'll typically have Muskets. Interestingly, <u>Chronis</u> seems to have had the same idea years before me (though I haven't checked if he implemented it in the same way). No Barbarian cities past Renaissance: Seems more realistic, and enough cities are created in the New World during the early eras. See also 302 stops Barbarian research if they stop sharing a continent with any civ. 301 lets Barbarians only build units that some civ on the same continent can build. dlph.6 disables Barbarian Spies. Marines (or is it Infantry?) as free defensive units Machine Gun as free defensive unit. in Modern-era starts. Rationale Can't use Machine Guns to prevent Barbarians from pillaging.

Tech speed increased when playing with Raging Barbarians

308

Increased research speed modifier for all civs in games with RB in the Classical in Medieval era.	
	RB forces the civs to dedicate resources into fighting Barbarians, and as a result, global research tends to lag behind the historical time line.

	L

size, 3 on Hu obs. with Co 2 Great Merc abilities base i. +1 trade ro except wh based on a was alread restricted	2 Walls (1 on Duel and Tiny world uge), rporation, chant points, ed on game settings: oute in cities on the same continent en playing with RB. This ability is a "global trade routes" ability that dy in the game but unused. Now to cities on the same continent.	Cost 150, Masonry, no prereq. buildings, no obsoletion, 2 Great Spy points, abilities (ii) and (iii) regardless of settings.
II. Prevents E	Barbarians from entering your	

when playing with No Barbarians. iii. +100% emergence of Great Generals within owner's borders (no change) if playing with RB or No Barbarians. I.e. TGW doesn't have this ability anymore under normal settings. Can be built on Classical and earlier starts. Can be built on Ancient and earlier starts. A strangely cheap wonder in BtS considering that it represents (arguably) the most Rationale massive building on Earth. Can be costlier now that Barbarian activity peaks later (and OK to allow it with Classical era start). Removing the GG ability under normal settings keeps the rules complexity in check (wouldn't be a problem wrt. game balance). Trade route flavor: One purpose of the Chinese Great Wall was to protect traders. Some segments protected a portion of the Silk Road. Similar to Castles providing an extra trade route. GM points go along with this, but the goal is also to further sideline the awful espionage system. A nice side-effect of the Wall prereg, is that Protective leaders get an implicit discount on TGW. Also makes sure that TGW can't be built before founding a second city – players should analyze whether they're exposed to Barbarian attacks before deciding to build TGW. The Archery reg. is to make Archery a bit better, and to make Masonry less cluttered visually; TGW still requires Masonry for the prereg. Walls. I believe this makes some sense historically as well – walls (with protruding towers) are much more useful with effective projectiles. (But this doesn't explain why ordinary Walls don't require Archerv.) See also Without <u>140</u>, which changes the formulas for the number of prerequisite buildings, only 1 Wall would be required on Standard-size maps. The Great Lighthouse (GLH): cost 200 in BtS, 300 in K-Mod; cost 250; obs. with Astronomy obs. with Corporation Too powerful in BtS, at least compared with most other wonders. And I don't like that Rationale this ancient wonder becomes most effective in renaissance (with Astronomy). I meant to nerf this later on (along with other balance changes), but with TGW obsolete at Corporation, GLH obsoletion needs to be moved right away. The Colossus: cost 250 (as in K-Mod): cost 150 in BtS. 250 in K-Mod: obs. with Chemistry. obs. with Astronomy. Don't want both Colossus and GLH obsolete at Astronomy. The K-Mod cost increase Rationale seems reasonable; it's an extraordinarily cheap wonder in BtS. Perhaps Forge should be nerfed instead – if Forges weren't spammed everywhere, Tbd. Colossus wouldn't be such a small investment. 311 Number of units from uprising events reduced (now independent of world size) Thd. These events could use additional checks and balances. 312 XP from Barbarians counts half for Great General XP from combat against Barbarians counts 50%, XP from Barbarian combat never counts for GG. rounded down, toward Great Generals (GG). Rounding down means that 1 XP (i.e. after combat with very one-sided odds or withdrawal)

borders on this continent (no change) except

doesn't count at all toward GG. Units that already have 10 XP can't gain further XP from Barbarians (no change), and thus can't contribute to a GG either.

XP multiplier for attacking Barbarians reduced to XP multipliers are 4 when attacking and 2 when 3; no change when defending against Barbarians. Thus, can't hope to gain more than 1 attacking a Barbarian unit even at 95% odds. XP (0 GG points) by fighting a Barbarian unit at odds above 90%.

defending. Can expect to gain 2 XP from

Upper limit for XP gain per combat set to 6. Consequently, can gain at most 3 GG points per Barbarian combat.

Can gain up to 10 XP from a single attack.

Rationale

It's not plausible that wars against Barbarians should produce no GG. Ancient China had plenty of GG that only fought against peoples that Civ would represent as Barbarians, I'd also like to give plavers a (fighting) chance to get a GG without starting a war.

The original developers must've been worried about Barbarian XP farming, and for good reason. Having Barbarians respawn in some cul-de-sac isn't difficult. Can be worthwhile to exploit just for getting units to 10 XP; which is why I think some restrictions were needed regardless of GG points.

Thd.

Farming may still be feasible; is a 15% risk of losing a unit worth 2 XP and 1 GG point? Could be, especially if it's an outdated unit. Cf. Tbd. under 304.

Reduce upper bound for per-combat XP to 5 (2 GG points)?

Perhaps apply the XP restrictions to all combat; would like to reduce combat XP in general in order to lower the stakes in combat.

313 Difficulty-based combat bonuses vs. Barbarians

Set the Barbarian combat penalty against humans to 5% on Monarch, Emperor and Immortal (and King; see <u>250a</u>). This is in addition 10% on Noble. Then 5% on Prince, and 0 on all to the 10% penalty for Barbarian Galleys from K-Mod ("Disorganized" promotion). No change to the other difficulty settings and no change to the Barbarian penalties against the AI.

The penalty is 40% on Settler and drops by 10 percentage points with each difficulty level to levels above Prince.

Rationale

Despite the nerf to fogbusting (300), it still seemed best to rely mostly on fogbusting on the higher difficulty settings because fighting Barbarians at tech parity is very costly. This slight change to the combat penalty should make a significant difference because, when units are evenly matched, even a slight change in combat strength tips the combat odds from 50:50 to 60:40 or more.

haven't changed Deity because degenerate tactics (such as excessive fogbusting) are normal on that difficulty. Also matches the degression of the animal penalty, which reaches 0 only on Deity (see below).

The combat pe	nalty that animals	receive is:			
difficulty	vs. human	vs. Al	difficulty	vs. human	vs. Al

314	Tribal villages ("goody huts") revised		
See also	315b makes it easier for Explorers to enter guarded Tribal Villages.		
Config	Most of the specific changes to the Tribal Village outcomes are customizable and revertible through Civ4GoodyInfo.xml. I haven't added any new tags; instead, I'm e.g. using the Gold and Tech tags together to represent tech progress.		
AdvCiv	,	Vanilla Civ 4 (no changes in WL/BtS/K-Mod)	
game progre first 50 turns speed; these Most of the a multiplier tha turn. That m increases su	adjustments happen through a	The Warrior outcome is blocked until 20 turns have passed (not speed-adjusted), and Barbarians can only appear at a certain distance from cities. Apart from that, only the Tech outcome somewhat scales with the game progress (by granting a tech that can currently be researched).	

Rationale

The main goal is to make huts discovered via Caravels or Galleons more rewarding. and thus also give Explorers a better use. And some of the free techs granted in BtS are too powerful in the early game – I quess that's why players commonly play without goody huts.

I'm tying the adjustment factor to the game turn rather than e.g. era because I don't want players to wait for an era transition before entering a goody hut. That's also the reason for the flat effects during the first 50 turns. Gold doesn't have any use in the very early game, so players might decide to let a hut "grow" before entering it.

The power-law function is supposed to mirror the overall economic growth, which is superlinear. I'm freezing the effects on turn 250 because I don't think that industrial civilizations can gain that much from visiting or raiding Bronze Age (or Chalcolithic) villages. "Times 10" is a nice and simple maximal effect (and one can kind of tell that the maximum is reached when a multiple of 10 gold is paved out).

Config

Start turn, peak turn and maximal multiplier are set in GlobalDefines advc.xml.

The High gold outcome grants between 40 and 100 gold, and the speed adjustment is based on 60 gold and High gold is between 20 and 120. the training cost modifier, i.e. only 200% on Marathon, Other than that, the payout during the and high difficulty settings (no change); e.g. on is multiplied by ten (after being multiplied by the training cost modifier).

The Low gold outcome grants between 20 and Low is the more likely outcome on the medium first 50 turns is as in BtS. By turn 250, the payout Monarch, Low is four times as likely as High. The amount of gold is fully adjusted to game speed. i.e. tripled on Marathon.

Rationale

120 gold is too much early on, but expected values between 40 and 50 are OK I think. considering that gold can't be utilized until city maintenance becomes a factor, whereas e.g. a free Scout worth 15 production (=30 gold?) is immediately useful.

Marathon games tend to be played on larger maps with more huts per civ, hence the smaller speed-adjustment factor than in BtS.

During the first 50 turns, goody huts grant 35 to 75 progress toward a tech. The tech is directly discovered only if that progress is enough to cover at least 80% of the (remaining) tech cost. The granted progress is adjusted to the game speed and game turn in the same way as gold (see above).

The tech is chosen uniformly at random from all pre-Industrial techs that the civ entering the researched tech.

When the Tech outcome is rolled, the hut grants a free tech regardless of that tech's cost. The tech is chosen uniformly at random from among those currently researchable techs that are flagged as bGoody in Civ4TechInfos.xml. No game speed or progress adjustment, but tech costs increase with the game speed and progress. That said, the only post-Classical bGoody techs are Music and Astronomy, so the Village is able to research, including the currently only way to benefit significantly from huts across the ocean is by reaching them in between Optics and Astronomy, and even then it's a long shot.

Rationale

The expected amount of research is about the same as the expected amount of gold (considering that some research can go to waste when the tech is cheap or already nearly discovered). In the early game, research is going to be more valuable because gold can't be spent immediately: in Renaissance, gold is going to be more valuable because civs can funnel it into a tech of their choice via the research slider.

guess the bGoody techs were chosen based on whether a "primitive" civilization could plausibly possess them. I don't think this works for Astronomy, which unlocks Galleon and Observatory, nor for most other post-Ancient techs. Tech progress somewhat gets around this plausibility issue by merely suggesting that the primitives contribute to the discovery, maybe like modern astronomers employing knowledge from ancient Babylonian records. Such contributions strain credibility for techs like Radio, so I've taken the Industrial and Modern techs off limits.

Thd.

Should perhaps also adjust the outcome to the map size. Tech costs are higher on larger maps (e.g. 100% on Duel, 130% on Standard), and the current payout is going to grant a full tech only rarely on large maps, particularly on high difficulty settings. Then again, one could argue that larger maps have more huts and therefore each hut should provide less research than on smaller maps, if anything.

Might also want to adjust to game era; see 910.

Outcomes that can't be scaled up in a straightforward way, namely Map, XP, Heal and Scout, get a chance of being "upgraded" if they occur later than turn 50. The upgrade probability heals the unit entering the Village and Scout reaches 100% around turn 160. For Map, XP and grants a free Scout.

Heal, an upgrade means that another positive outcome is chosen at random and both are applied. For the Scout outcome, the upgrade is a free Worker instead of the free Scout.

Regardless of the game progress, the Map outcome reveals a randomized subset of tiles within a radius of 4. XP grants 5 XP points. Heal

Rationale

These four are pretty worthless when triggered by an Explorer; can't have so many dud outcomes. A higher amount of XP wouldn't help (not needed on an Explorer) and would be too similar to a Great Warlord.

A free Scout seems out of place when that unit is already obsolete; better to replace that outcome entirely than to roll an additional one. In Renaissance, a free Worker is not as valuable as tech progress or gold, but it should work well enough as a consolation prize.

The Warrior outcome produces a free unit chosen based on combat strength and randomness from among those pre-Industrial combat units that don't require resources and for which the Barbarians have all the prerequisite techs, i.e. Warrior, Archer, Longbow or Musketman. (The same procedure is used when playing with "No Barbarians" as that option does not prevent the Barbarians from discovering tech.)

The types of hostile units (Barbarians outcome) are also chosen as above. The lower bound for the number of hostile units (iMinBarbarians) increases a little over time, but there's also an upper bound of 2 + iMinBarbarians.

A non-hostile free unit has a chance of receiving up to two free promotions. Each of the two promotion is assigned with a probability equal to half the upgrade probability (see Scout above). If a promotion is assigned, the specific promotion is chosen randomly from Combat1, Guerilla1, Guerilla2, Woodsman1, Woodsman2 and Cover. The surrounding terrain also factors into the selection of the promotion.

Always produces a Warrior.

Hostiles are always Warriors. The Weak Barbarians outcome usually spawns 1 or 2 Warriors and Strong 2 to 4, though as many as 8 are possible.

The free Warrior starts with 0 XP and without any promotions.

Choosing the unit based on the game era would be simpler, but then Barbarian Archers would appear too early (even if game era minus 1 was used). In Renaissance, the received unit will usually have to be upgraded in order to be useful; the free promotions should make such an upgrade worth considering. I've picked promotions with a "native" flavor. The selection algorithm is pretty complicated, but I don't think players need to worry about that. See also 302 curbs Barbarian research when civs don't share a continent with Barbarians. (But this doesn't apply when playing with "No Barbarians".) The Worker outcome can't occur until turn 20 (on Normal speed). Halved the probability of the Settler outcome on Chieftain and Settler difficulty and set it to 0 on Warlord. Rationale I think novice players should play on Noble difficulty, but for a R&F game, it could make sense to go down to Warlord, so that difficulty setting shouldn't have grossly unbalanced goodies. Config The Settler changes are implemented through CivHandicapInfo.xml. Increased the probability of the Tech outcome at the expense of the Gold outcome so that Gold is less than two times as likely as Tech. Rationale The Tech outcome is more interesting than Gold. Now that their power level is similar, Tech can be awarded more frequently. Gold and Tech should perhaps even be equally likely. Config Through CivHandicapInfo.xml Theyre hard to spot on Forest tiles. I've also tried a more reddish, saturated color, but the increased size seems sufficient and a color change alone doesn't help because the BtS-size huts barely poke out of the trees. See also By now, I've added a Tribal Village "bubble" to the Resource layer (change 004z), so the size of the 3D model isn't so relevant anymore.

Config Through XML\ArtCiv4ArtDefines_Improvement.xml	See also			
	Config	Through XML\ArtCiv4ArtDefines_Improvement.xml		

315	Recon units
Rationale	To make these units more useful. Scout has the problem that Warrior provides sufficient exploration early on while also being highly useful for military happiness, city defense and for staving off Barbarians. Moreover, on high difficulty settings, the Al grabs most of the goody huts. Explorer is rarely used at all.
315a	Scout can attack Animals.
Rationale	Makes it easier to get promotions. Plus Scout requires Hunting, so it should know how to hunt.
Config	I've added a new tag bOnlyAttackAnimals to Civ4UnitInfos.xml.
Tbd.	Give Scout the ability to enter Peaks. Will have to adjust the isImpassable check added to AI_guardCitySite by change 300. (And perhaps other isImpassable and isPeak checks too.)

See also	Change 500b, once enabled, will make Warrior less useful for military happiness. 912c already reduces the military happiness from Hereditary Rule. 124 (trade routes only through revealed tiles) and the increased AI aggressiveness of K-Mod/UWAI compared with BtS reward repeated exploration. 250e reduces the number of free AI Scouts on Emperor difficulty.		
315b	Explorer can attack Barbarians, but Culture garrison value: 3 (0 in BtS; V	can't capture cities and gets no free promotions. Varrior 3, Archer 4, Axeman 4)	
Rationale	It's quite common for goody huts to be guarded by a Barbarian unit by the time Explorer becomes available. In BtS, there is no way to enter such goody huts with an explorer. That's kind of realistic – one can't expect friendly relations with the villagers after killing their guards –, but the Explorer needs a buff, and it should be a buff that makes it better at exploring rather than giving the Explorer some auxiliary use in warfare. It's also wrong to imply that the European explorers engaging in combat with American Indians always acted in self-defense.		
	With "no capture" as an additional ability ("attack only Barbarians" merely replaces "can only defend"), the unit gets too complicated, or at least too verbose, so I'm removing the promotions. They're not really useful anyway because Barbarians rar attack Explorers, at least not on Forest, Jungle or Hill tiles, and Guerilla2 and Woodsman2 are unattractive for a unit that already ignores terrain movement costs		
	Culture garrison value: E.g. Columbus became governor of Hispaniola. It's a pretty low value, but the same value as Axeman seems a bit high.		
Config	've added a new tag bonlyAttackBarbarians to Civ4UnitInfos.xml.		
Tbd.	Replace the "ignore terrain movement cost" ability with a free Sentry promotion. (Does that work inside a Caravel? Should it?). When Scout gets the ability to enter Peaks, Explorer will have to get it too.		
	Are huts sometimes guarded by Archers? Even if an Explorer starts with a promotion from Barracks, a fully fortified Archer is a tough opponent		
See also	314 makes overseas goody huts discovered in Renaissance more rewarding.		
AdvCiv		BtS	
	ll-terrain ability prevents Gunship ng Workers. Explorer can capture /orkers.	The "cannot capture cities" ability prevents Gunship (and any other unit that can't capture cities) from capturing Workers.	
See also	Not relevant for now because 010 co	urrently causes captured Workers to be destroyed.	
Rationale		ain somehow in the future, and then another (rare) arbarian Workers for nearby colonies.	
315c	Scout gets +100% combat strength against all Barbarians, not just against Animals. The AI may use Scouts and other exploration units to guard city sites (i.e. for fogbusting) when there is nothing to explore.		
Rationale	Warrior is still the better unit against Barbarians (as it should be) in every regard except mobility: greater benefit from combat promotions due to greater base strength; can attack pillagers; +25% city defense.		
315d	Cap on early Scouts from huts		
outcome if their owner already has two or more exploration units. 20 or so turns, it's not so rare to end up we total of three Scouts when starting with a second		Scouts can beget more Scouts, and, in the first 20 or so turns, it's not so rare to end up with a total of three Scouts when starting with a Scout. Here someone reported three Scouts in a row for a total of four.	

Rationale	The third Scout is a weak outcome, and no fun because the map gets explored too
	fast.

500	Dormant changes; to be enabled sometime in the future.

Rationale	Requiring just any military unit becomes a pretty nonsensical rule by the Medieval era. Can either abolish it, or change it so that credible garrisons are required.		
Config	Disabled through DEMAND_BETTER_PROTECTION in GlobalDefines_advc.		

Tbd.	Need to show "Garrison strength x.x, population: y" in help text when there is anger. Otherwise it's too difficult to learn. Remove the "can no longer train" clause; would get circumvented by cutting off strategic resources. Need to add something else to account for technological progress – don't want cities that don't grow to be guarded by Warriors indefinitely. Game era? But don't want all cities to demand better protection at once when the game era advances
	Might make upgrades mandatory (if not upgraded in time, units refuse to fight with outdated equipment and defect). Then this change will be important because otherwise players could try to play around unit obsoletion (e.g. don't get Hunting so that Warriors can be trained indefinitely) so that they don't have to upgrade their city garrisons.

550	Changes to tech trading	
See also	130z deals with tech gifted by the AI to rivals	
550a	Tech trade value dependent on tech score and power	
AdvCiv		BtS
Al gives tech away cheaper (or expects to get it cheaper) when the receiving side is less advanced and powerful than the giving side; charges more if the receiving side is more advanced/ powerful. The effect is small in the early game and increases as the game progresses.		Tech trade value is independent of how well the involved civs are doing. (Vassals can receive free tech from an AI master if they're behind, but that's not a matter of trade value.) BBAI and K-Mod let AI civs that are falling behind technologically check for tech trades more frequently (no change in AdvCiv).
Exception: Doesn't apply to vassal-master relationships, i.e. vassals don't expect to get tech from their master at a discount.		Vassals charge less from their master for resources, trade embargos and civic/religion changes. Tech trades are unaffected by vassal/master relation.
	A little extra catch-up mechanism. Also, when dealing with a backwards civ, it's smarter to be generous than to insist on a square deal.	
	For vassal-master, the basic idea in BtS is that the master can trade favorably with the vassal. Don't want to turn this upside down.	
550b	Al doesn't make bad offers for huma	ın tech
AdvCiv		K-Mod
		The AI can (counter-)propose trades that are up to 300% in its own favor.
The AI always offers something when proposing a trade.		May offer nothing at all.
Rationale	I used to accept bad AI offers for tech because I believed that they're due to partial research progress of the AI. That can be the case, but often isn't; so it's a bit of a trap.	
Tbd.	The AI probably shouldn't contact players with bad non-tech deals either.	
550c	Changes to tech monopoly thresholds ("don't want to trade just yet")	
AdvCiv		BtS

	illing to trade tech if it has contact and still hasn't met most civs.	Al willingness to trade a tech is based on the percentage of known civs (excluding itself) that already know the tech.
acts as if 40°	civ knows only one civ, the AI civ % of the other known civs already h (when in fact it's 0%).	If the AI knows only one civ, the AI will hardly ever trade (unless Friendly) because the percentage is either 100%, meaning the other civ already knows the tech, or 0%, meaning the AI tries to monopolize the tech.
Rationale	This should make civs on small cont	inents fare better.
(TechTrade) are randomly points. This i per game to same for all t	r-specific thresholds for monopolies KnownPercent; between 0 and 100) increased or decreased by up to 15 random adjustment is applied once each tech separately, i.e. it's not the techs, and can't be manipulated rated trade requests by a human	TechTradeKnownPercent is only adjusted for techs that the AI wants to monopolize badly, in particular military techs. There's no random component.
	The BtS monopoly thresholds are a bit too predictable in some cases, especially when there are just two or three civs on a continent. And e.g. Pleased Tokugawa <i>never</i> trading anything useful is depressing.	
	Perhaps the issues with small continents are already taken care of by the change above; not sure if the randomization is still needed.	
550d	Research bonus if tech trading disabled	
on the Custo increased for	o Tech Trading" option is checked om game screen, research rates are rall eras except Ancient and Future. In bonus is the highest for Medieval ance tech.	"No Tech Trading" doesn't affect research speed, and such games tend to lag behind the historical time line.
	A lower bonus in the early game because tech trading doesn't become available until the middle of the Classical era even if it's enabled. A lower bonus after Renaissance because tech progress tends to get more disparate the longer the games lasts, and so fewer and fewer tech trades happen.	
Config	Can be adjusted or disabled through GlobalDefines_advc.xml.	
	Would be unnecessary if there was a proper tech diffusion system to replace tech trading.	
550e	Era threshold for "fear you're becoming too advanced" based on the recipient's era	
AdvCiv		K-Mod

When a civ receives a tech in trade, all third parties who know the recipient increase their received-tech memory about the recipient (as in BtS), except when (as in K-Mod) the recipient had already researched 2/3 of the tech, or when the era number of the tech is at least 2 lower than the era number of the recipient. E.g. when a civ is in the Medieval era and receives Archery, no tech-received memory is increased.

Tech-received memory leads to "We fear you are becoming too advanced" (as in BtS). K-Mod adds the two exceptions. In the second one, game era (averaged over all civs) is decisive, not the recipient's era.

The recipient's tech-received memory (for "You've shared your discoveries") is also not increased when one of the exceptions above applies.

Rationale

K-Mod comment in CvDeal::startTrade: "This is to prevent the AI from being crippled by human players selling them lots of tech scraps."

Good reason, but this also affects human players receiving tech. Humans need to be able to tell whether a trade is going to count, and the game era is unknown early on, and tedious to determine later on.

I've extended the exceptions to "shared discoveries" because that's also exploitable in BtS.

Insignificant tech trades (2/3 progress or 2 eras behind; see above) are unaffected by the nobrokering game option. Regardless of the brokering option, such techs can be passed along on the same turn that they've been received.

Techs can't be traded on the same turn on which they've been received in trade.

The AI does not reject any tech trades on account of the no-brokering option.

When the AI has already 50% or more progress toward a tech, it refuses to accept that tech in trade when "No Tech Brokering" is enabled: "We would have nothing to gain."

Rationale

Removing the 1-turn delay made it much easier to implement the change to "no brokering". Also makes sense to treat techs that are traded when 2/3 complete the same way as techs discovered entirely independently.

550f	Tech purchases	
See also	036 also affects the amount of cash that the AI is willing to trade.	
AdvCiv		BtS
keep in its tre	mount of gold that the AI tries to easury can be increased beyond the pending on the potential for tech	Based on civ size, leader flavor and units needing upgrades.
When the an AI civ checks for possible tech trades with another AI civ, if it doesn't find a techfor-tech trade, then the first AI civ tries buying the tech that it is currently researching for gold (if the second AI civ knows that tech).		but just gold for tech isn't possible.
	Should help against AI civs falling far behind in tech. On the flip side, it means extra gold for the tech leader. That said, the AI doesn't pay very well for tech, especially when it has fallen behind (see 550a, 551).	

trade to a hu progress of t		Based on civ size, finances, gold previously traded (all still the case in AdvCiv).
Rationale	e Should make it more likely that a somewhat fair gold-for-tech trade is possible when the BUG gold alert triggers.	

551	Al trade value of tech reduced	
AdvCiv		BtS
When the AI trades for tech, the research cost of that tech is multiplied by 1.25 as part of the trade value computation.		The multiplier is 1.5. For comparison, traded gold gets multiplied by 2.
Depending on how widely a tech is known, its trade value is multiplied by a factor between 0.83 and 1.17.		The multiplier is between 1 and 1.5.
Rationale	Could argue that research and gold should have the same modifier because gold and beakers are essentially interchangeable. But gold should be more valued in trade because the other side loses the gold whereas imparting a tech costs nothing. By reducing the trade value of tech, I'm making it harder to conduct diplomacy (sponsored war, brokered peace, fair trade bonuses) through tech, and easier to buy tech with gold. I'm not setting the multiplier even lower (say, 1) because change 550a already makes it easier to buy tech (for civs that have fallen behind).	
Tbd.	The underlying issue is that it doesn't cost anything to share tech.	

552	Al trade modifiers (XML) revised	
AdvCiv		BtS
Al trade modifier reduced from 10 to 0: Archery, Horseback Riding, Guilds, Military Tradition, Ecology, Electricity, Advanced Flight, Composites, Stealth, Genetics, Fiber Optics, Satellites, Robotics Increased from 0 to 10: Civil Service, Nationalism, Chemistry, Military Science		In trades, the AI treats some technologies as having a 10% higher value than their beaker cos would suggest, namely those listed in the left column and (no change): Feudalism, Flight, Machinery, Gunpowder, Rifling, Steel, Assembly Line, Railroad, Artillery, Industrialism, Rocketry, Fission, Fusion.
Rationale	The BtS weights seem to be aimed at military techs, especially nuclear war, and Space victory. I think this should be (and is at least in part) handled by the DLL; don't want an AI civ that isn't aiming at a Space victory to pay extra for e.g. Genetics. I'm keeping the modifiers for military tech and I'm adding a few more, but not for pre-Medieval tech as pre-Medieval AI warfare is fairly rare. There is also CvTeamAI::AI_getTechMonopolyValue, which makes the AI not "want to start trading away this technology just yet," but if the AI still agrees to the trade, I want there to be an extra high penalty if it's a trade with someone's worst enemy.	

	+10% trade value is not going to affect the enemy trade penalty much. Perhaps 130p should give the AI trade modifier some extra weight when recording trade values (peacetimeTradeValue).
Config	CIV4TechInfos.xml

650	Changes to nuclear warfare	
Tbd.		
	Nukes need major balance and AI changes. My changes so far are very minor.	
See also	130q about diplo effects of nukes 031 changes the AI evaluation of resources in a way that makes Uranium more attractive (once nukes can be built). dlph.7: Neutral units not hurt by nukes dlph.16: Minor AI changes 906 lets Stealth Destroyer carry missiles.	
AdvCiv		BtS
AI uses air r	econ along its coast.	Al seems to use air recon only on rival cities.
Rationale	Could reveal enemy submarines. Not enough to properly defend against Tactical Nukes, but the BtS AI doesn't even seem to try.	
AdvCiv	1	K-Mod
Al willing to build the Manhattan Project unless it looks like it will win the game anyway,		Al considers the Manhatten Project only when in the Dagger or Crush strategy, or when close to a Conquest victory.
Rationale	The AI shouldn't take risks with nukes when it's winning anyway (Conquest, or crushing its current war opponents).	
that aren't (p deciding who Not worried that are abo Utility value	ed (divisor 3) about attitude of AI civer prospective) war enemies when ether to build the Manhattan Project. at all about unlocking nukes for rivals ut to win the game (victory stage 4). for gaining access to nukes takes the number of civs in the game.	The K-Mod AI checks the attitude of all rival civs; divisor is 2. Utility for nuke access is a constant.
Rationale	A K-Mod comment says that it should be up to the human player to decide whether he/she wants nukes in the game. I don't agree with that, but I mustn't make the AI so willing that some AI builds Manhattan most of the time; or at least not until the game is about to end.	
	Generally, I'd like the AI to unlock nu	kes when a disliked civ is about to win the game.
	isband nukes when in financial as the only other remaining units are	As far as I can tell, nukes are disbanded before most other units. BtS tried to save expensive units, which is fine in the case of nukes, but K-Mod focuses on XP, which is generally better, but fails for nukes.

700	Rise & Fall game option; see chapter Rise & Fall. Id 700: the fundamentals. Other ids only for code outside the R&F classes. Except for those highlighted in blue, all changes in the following are only relevant if R&F is enabled.				
Rationale	For the term "intermediate period": Ancient Egyptian periodization (Wikipedia).				
Config	The number of chapters, interlude length and scoring delay are configurable through GlobalDefines_advc.xml.				
Tbd.	Text so far only in English and German.				
	Earth1000AD scenario not currently supported. During initialization, CvPlayer verifyAlive kills all civs because no cities have been created yet. I don't see the R&F code causes this, but apparently, it does. Also, the unequal AI handic aren't currently supported by R&F. Would have to store the AI handicap (in RFG and in savegame) before human takeover and restore it when AI control resur				
	particular the number and length of number of chapters implies a lower	Should perhaps factor game settings other than difficulty into the Rise score, in particular the number and length of chapters. For now, my assumption is that a higher number of chapters implies a lower number of turns per chapter, which makes it harder to maximize the chapter score, and that this about cancels out.			
	R&F autosaves at the start of the huthis also when R&F is disabled, esp	uman turn, not at the start of the round. Should do ecially in scenarios.			
Credits	Inspired by board games like <u>Peloponnesian War</u> and <u>History of the World</u> (both from 1991) and Kael's Assimilation mod (which is included in <u>Fall From Heaven II</u> and <u>RoM</u>).				
See also	,	Since R&F scoring is partially based on victory stages, it somewhat hinges on change 115, which revises the computation of those stages.			
	250b disables free wins against Bar	barians when the SPaH or R&F option is enabled.			
701	"Require complete kills" option repla	aced by the R&F option			
AdvCiv		BtS			
remaining (ast city of a civ is captured, all its units are removed, and the civ is there is no option for changing this	When "Require Complete Kills" is checked, units remain in the game when the final city is captured. A civ is only eliminated when all of its units are killed and all cities captured.			
		The option was added by patch 1.61.			
Rationale	adding the R&F option. Removed it	-kills option (for the reasons stated below) before entirely now because it's easier to replace a game maintaining savegame compatibility).			
Too much of a hassle to keep the complete-kills option in mind for all the doubt that the WL, BtS, BBAI and K-Mod code can really handle it eithe team games when some team members still have cities and others don this option was ever intended to be more than a gimmick. You even need enemy Spy (or since BtS: hope that the Spy kills itself somehow).					
	Now, in principle, the AI still needs to be able to handle civs without cities because human player could decide to never found a city. Through Advanced or later-erase the player could even have a sizeable army, not to mention scenarios. I'm trying thave the game at least not crash in such cases, but it's not really supported. (Barbarians don't necessarily have cities either, but get special treatment in most the AI code; this works.)				
Tbd.		emove some, turn some into Barbarians and turn ar) allies that the dead civ might have had before			

its demise. This is more plausible and doesn't create issues for the Al.

702 Error handling if game settings are incompatible with R&F

Not compatible: multiplayer, team games (including Permanent Alliances), One-City Challenge, SPaH.

703 "Score" tab on the Victory advisor screen

Showing scores of past chapters and the start dates of chapters still to be played. When R&F is enabled, the tabs "Resolutions" and "Members" are merged into one in order to make room for another tab.

704	Changes to Dawn of Man (DoM) screen		
Show the so	reen at the start of each chapter.		
Tbd.	In the later chapters, the DoM can appear with a few seconds delay. Seems like the EXE is too busy with something else. Perhaps this wouldn't happen if I'd launch the popup earlier.		
See also	004j: DoM screen shown after regenerating map		
AdvCiv	y BtS		
Heading of t Civilization".	the DoM screen says "The Dawn of	"Dawn of Man"	
Rationale	Perhaps they were thinking of Kubrick's "2001", which shows a subtitle "The Dawn of Man"; but this is followed by a scene with apes		

Rules and AI changes to prevent self-collusion (helping a civ from the previous chapter that hasn't been scored yet, or one about to be taken over)

In addition to the AI behavior described in the R&F chapter:

The AI is a bit more lenient in pre-Currency tech trades – accepts if it receives only 90% of what the player receives.

If <u>UWAI</u> is enabled, the AI refuses to talk when war utility is 20 or greater.

Rationale

During a chapter, the player should (ideally) only have to consider the interests of his/her current civ. The AI changes described above (and in the R&F chapter) combined with intermediate periods can't completely prevent self-collusion, but make it much less relevant.

Restrictions don't apply to civs that the player is probably not going to want to play in the next chapter..

Trade acceptance: With R&F, it can be extra annoying when the AI refuses to trade two techs of (almost) equal value, but won't accept a 2 for 1 either because this would already favor the AI too much.

War utility threshold: Don't want players to bypass trade restrictions through reparations.

Would be nice to give the player more feedback, e.g. a grayed-out "gift" button, or the AI responding "you're being too generous" when an offer is too good, but these things seem almost imposible to implement. I did manage to get the AI to say "no thanks" to gifts.

Tbd.	Perhaps the AI should always show some leniency in pre-Currency trades, i.e. regardless of the R&F option.
	Perhaps reduce or remove the penalty for playing a civ multiple times.
	Should the AI be willing to talk when all potential peace deals are too favorable for the AI? E.g. when the AI wants the equivalent of 1000 gold and the player doesn't have that much gold, but does have some 5000-beaker technology. Currently, the AI is willing to talk then, and that's a bit confusing. Though refusing to talk would also be confusing I think – "How is that big technology not enough?"

706	Changes related to Al Auto Play and switching the human-controlled civ
	layer "Retires", the current chapter completes on Al Auto Play. The intermediate periods chapters aren't actually Al Auto Play; there simply isn't a human-controlled civ at all.
	UI interface elements during intermediate periods and suppress advisor screens and is has required changes in a bunch of different places.
Rationale	The player may simply want to end a chapter because he/she doesn't feel like completing it. But retirement is mainly intended for situations when things are going too well. The civ could then become a huge obstacle in later chapters (or just win the game for the AI). Don't want the player to sabotage his/her own civ then.
Tbd.	After retiring, the player's civ keeps the game handicap, e.g. Prince, but since the civ is treated as an AI, the AI modifiers from the game handicap also apply, e.g. 5% faster training of units on Prince. This is confusing, but difficult to change because the AI modifiers get applied in many different places. AI Auto Play without retirement applies the AI handicap (change 127), which is consistent, however, a retired civ should generally do rather badly because retiring is supposed to help when the player's civ gets dangerously far ahead. Perhaps set the handicap after retiring one higher than the game handicap (or always Monarch?) to somewhat cancel out the AI modifiers.
	Should provide some means of ending the game on the spot so that the replay is shown. Can currently only fast-forward to the replay by retiring repeatedly until a civ wins during Auto Play.
	Known issue: When taking control of a civ via Civ Changer (Alt+Z) for debugging purposes, all non-expired messages that that civ ever received are displayed on the main interface. Calling CyInterface().clearEventMessages() from ChangePlayer.py doesn't get rid of them.
See also	Hinges on 127, which allows MoreCiv4lerts to work when the player takes control of an AI civ. Also records start and end of AI Auto Play in replays, which makes it unnecessary for R&F to record early retirement in replays.

707	Changes to the game end sequence			
No game end upon defeat; Rise score shown als "final score" in HoF, scaled up ("normalized score") for the Dan Quayle screen.

901	AdvCiv	K-Mod	BtS
Forest Preserve	+1 commerce		at Scientific Method; +1 commerce if riverside

K-Mod 1.45 has added a 7th effect to Scientific Method, and enlarged all tech boxes to make room for a 7th icon. Not a good solution; surely no single tech needs to do 7 things.

Forest Preserve can use a buff anyway, and nature reserves originated in the early 19th century according to Wikipedia, which fits with Biology. I also don't see much of a connection between scientific method and forest preserves. Not a question of game balance really because Forest Preserves are rarely useful.

Removed the riverside commerce while I was at it. Simpler this way. Not much of a loss because Forests along rivers get chopped anyway (see also change <u>117</u>). Consistent with Lumbermills, which also provide commerce regardless of river.

Tbd.: Make the Forest spread ability more predictable and more useful. Grant health instead of happiness.

902	AdvCiv	K-Mod	BtS
	+1 production initially; +1 commerce with Electricity; 4 turns to build; +1 production with	+1 commerce with Electricity; 8 turns to build +1 production with	+1 production initially; +2 commerce with Electricity; 8 turns to build +1 production with
	Replaceable Parts	Replaceable Parts	Replaceable Parts

Watermills are decent with Replaceable Parts, but rarely useful before that (whereas, historically, they were highly useful throughout the Middle Ages). The K-Mod change to Serfdom (+1 commerce from Farms) exacerbates this. One commerce at Machinery (also a K-Mod change) is the least that needs to be done.

Commerce from Electricity is apparently supposed to get the shift from waterwheels to turbines across (similar for Windmill). That's OK (electricity can be sold), but doesn't have to be so pronounced. Electricity boosting local production is also plausible.

Never saw why Watermills should be slow to build. Perhaps originally an attempt to make Serfdom attractive – well, that didn't work. Reducing build time is a way to make Watermill better early on without making it too good later on.

Tbd.: Still a bit unattractive. 6 turns to build but +2 production earlier?

	+1 production with	+1 production with	+1 production with
	Railroad track;	Railroad track;	Railroad track;
	doesn't remove Forest	doesn't remove Forest	doesn't remove Forest

The middle column is K-Mod 1.45; I'm keeping the earlier version (not shown above) and I'm reducing the build time in order to give Lumbermill a little extra push. Also, Replaceable Parts is just one tech away from Steam Power, which grants +50% Worker speed, but since Lumbermills are now at Guilds, that bonus is still out of reach, so they really take a long time to build in K-Mod.

I don't think players can be incentivized to not chop all Forests along rivers; not without making Lumbermills too strong in the lategame. Therefore, I don't like the river commerce ability (not on Forest Preserve either).

Tbd.: Want to move both Lumbermill and the +50% chopping yield (currently at Mathematics) to Machinery eventually, and apply chopping yields only to buildings and ships (not land units).

903,904	reserved		
---------	----------	--	--

905a	AdvCiv	K-Mod	BtS
Galley	3 moves, 3 cargo, cost 45	_	2 moves, 2 cargo, cost 50
Trireme	3 moves, 3 strength, no bonus vs. Galley, upgrades to Caravel and Privateer, cost 45	2 moves, 2 strength, +50% vs. Galley, upgrades to Caravel and Frigate, cost 50	
Caravel	4 moves removed AI types "Reserve" and "Escort"	3 moves	3 moves
Carrack	4 moves, 2 cargo, removed AI type "Reserve"	3 moves, 3 cargo	3 moves, 2 cargo
Navigation2 promo	Only available for units that can enter ocean	Available for all sea units	

Should give Galleys a use in early warfare (fast deployment), and make them better explorers. If 3 moves aren't enough to make naval deployment useful in land wars, then 4 moves with Navigation1 should do the trick. Sea units moving twice as fast as infantrymen along roads is reasonable from a historic pov, but 5 moves might be a bit much, also gameplay-wise. Therefore, I'm restricting Navigation2. Makes sense that "navigation" benefits ocean-going vessels more.

4 moves for Caravel to keep it faster than the early ships. Now just as fast as Galleon, which is also more accurate historically. Carracks, caravels and galleons could travel at 4 to 5 knots, triremes at 2 to 3 (much faster during battle; see e.g. Olympias on Wikipedia).

3 strength for 45 production makes Trireme a viable warship (perhaps even the best) until Frigate, which should make Triremes more worthwhile overall and might help the AI, which tended to train too many Caravels previously. Should now train a mix of Triremes and Caravels, and use only Triremes for protecting resources and escorting Galleys. May still train too many ships, but at least Trireme is cheaper than Caravel. While I'm at it, the upgrade from Trireme to Privateer is a bit less painful than to Frigate because Privateer is cheaper than Frigate, and this should make AI privateering a bit more common.

Historically, trireme-based ships remained in use in the Baltic Sea until the 18th century, and their usage didn't decline until the 16th century. "[The Battle of] Lepanto [1571] marks the last major engagement in the Western world to be fought entirely or almost entirely between rowing vessels, the galleys and galeasses that were still the direct descendants of the ancient trireme warships." (Wikipedia)

Carrack: K-Mod had increased the cargo capacity along with the other transport ships, but I think this takes the unit unnecessarily close to Galleon, especially now that I've increased the speed (can't not increase Carrack speed if I increase Caravel speed). Back to 2 cargo spaces.

Tbd.: Require Optics or Astronomy for Navigation2; that's more elegant than the restriction to oceangoing ships. "Explore rival territory" of Carrack should perhaps not work with military units in cargo (unless those units somehow also have that ability).

Credits: CFC user vedg pointed out <u>here</u> that there aren't enough incentives for upgrading Galleons and East Indiamen.

Rationale:

Transport: Having just 25% more cargo space than Galleon doesn't justify a more than 50% higher cost. Often not worth upgrading. To balance out the lower cost, I've removed the offensive abilities, which aren't entirely unimportant against rivals without Combustion. The unit can still "besiege" water tiles, i.e. prevent them from being worked. The lower strength should give pre-Combustion ships a fighting chance against besieging Transports, and shouldn't make much of a difference against post-Combustion units. While I was at it, I removed the Uranium requirement for historical accuracy; see this CFC discussion.

East Indiaman: Also no incentive to upgrade to Transport. On top of that, historically, East Indiamen appeared a century later than galleons, and were usually larger than frigates. Rather than a warlike Galleon, this is now a Frigate with cargo space. The ability to enter rival borders is messy on cargo ships because these ships (and their cargo) don't get bumped upon declaring war (see *Tbd.* under 905a). Instead, the East Indiaman gets +1 speed. The Civilopedia states that "the East Indiaman was inevitably slower than its descendants: the Ship of the Line and the Frigate." This appears to be nonsense: East Indiamen were often full-rigged clippers that could sustain speeds of 10 knots, whereas ships of the line sailed at perhaps 5 knots.

Bombard rates: 8 is the same as Catapult, far too little for ships equipped with cannons. Did not increase Ironclad's bombard rate (12 as in BtS) because at least early ironclads weren't as heavily armed as ships of the line.

Ship of the Line: I don't love the K-Mod change to strength; it makes Ship of the Line stronger, which is good, but does so partly at the expense of Ironclad, which is also too weak. 120 production seems pretty clearly overcosted. I've restored the BtS Iron requirement because it doesn't make sense from a historical point of view to require Iron for Frigate and not for Ship of the Line. The latter requires more metal parts (cannons, cannonballs, nails(?)), and thus has more need of a cheap metal. The K-Mod changelog says the goal was to give "ironless civs a decent

naval ship if they go for the right tech." Fair enough, but not really important. I hope my other changes to Ship of the Line can give the unit more plausible (niche) uses.

The speed bonus with Coal represents auxiliary steam engines that were installed on ships of the line in the early 19th century (see <u>Wikipedia</u>), and should make it easier to use Ship of the Line offensively. The tactical side of the AI (CvUnitAI) is aware of the increased speed, but I haven't changed the strategic evaluation (CvPlayerAI) of Coal and Ship of the Line. Too minor to make a difference.

The details of what it means that a unit has access to a resource are a little messy. The trade network doesn't extend onto hostile tiles, but I don't want Ship of the Line to lose speed in hostile waters, especially not immediately upon entering. Relying entirely on the availability in the capital could lead to situations where a Ship of the Line sits right on a Coal tile in a friendly Fort or city, and still doesn't get the movement bonus when the tile isn't connected to the capital. The current solution is to grant the extra move so long as either the current tile or the capital has access to Coal. This means that Ship of the Line can, in theory, still lose the extra move upon entering hostile waters, but this should be rare.

Tbd.: Should perhaps guarantee the extra move until the end of a turn if Coal was available at the start of that turn.

Bombard rates are still a bit too low. Ship of the Line and Ironclad need to be buffed further, and Frigate should upgrade to Ironclad. Want to allow Transport, Destroyer and Battleship with Coal, but with a movement speed penalty. Move Transport to Industrialism and Destroyer and Battleship to Artillery.

Could give Frigate and Ship of the Line +1 strength to make both more effective against Privateer and then restore Ship of the Line's 50% bonus against Frigate.

Want to apply the new faster-with-resource ability also to Industrial-era ships: allow them to be trained with Coal, but make them faster with Oil. Uranium should then be removed as an alternative requirement for Destroyer.

Config: Civ4UnitInfos.xml; note that East Indiaman is called NETHERLANDS_OOSTINDIEVAARDER in that file.

Ironclad	3 moves	3 moves	2 moves
	+25% Coast defense	req. Steel and	req. Steel and
	req. Steam Power	Steam Power	Steam Power

Rationale: To match the increased strength of Ship of the Line. The defense ability is a bit more flavorful than just +1 strength (and 13 would be an unusual strength value); ironclads had difficulty sinking each other and their battles tended to be stalemates. There is no generic defensive bonus in Civ 4 (though it would be easy enough to implement one), hence the terrain restriction. Note that cultural borders can allow an Ironclad to enter Ocean, so the restriction is not entirely irrelevant.

Removal of the Steel requirement gives Ironclad a longer window of utility. Also, the first ironclads, produced in 1862 for the US Civil War, were not clad in modern steel: the first steel mill in the US based on the Bessemer process was set up in 1865.

Tbd.: Stalemates aren't always fun; if it turns out that the ability plays badly, I could still just increase combat strength. It may also, despite the K-Mod change, still be too difficult to engage faster ships. Even early ironclads were only a few knots slower than frigates, so speed 4 would be justifiable; the restriction to Coast would still get across that ironclads aren't as mobile as frigates.

	and submarines		
	ignores first strikes		
	can load 1 Missiles		
	30% chance to intercept aircraft		
	requires Stealth	requires Stealth and Robotics	requires Stealth and Robotics

Rationale: The BtS submarines were too weak against Battleship and the role of Attack Submarine (hunter-killer) was too narrow. Now Attack Submarine is the ordinary submarine unit for the World Wars, and Missile Submarine a more expensive unit representing the cruise missile and ballistic missile subs of the Cold War. First strikes match the flavor of torpedos and invisibility well; consistent with first strike on Stealth Destroyer. Strength 25 and 5 first strikes would have a nicer symmetry with the 50% withdrawal ability, but that would make Submarines a bit too effective against Destroyers, which, as anti-submarine units, get to ignore first strikes.

Increased the cost of Battleship in order to further weaken that unit against submarines. The BtS cost is also too close to that of Destroyer.

Stealth Destroyer isn't needed as an efficient combat unit, and this would also be unrealistic. The few stealth destroyers that have been manufactured are classified as multi-role guided missile destroyers, and have strong anti-air and anti-submarine weapons. These additional abilities make the Stealth Destroyer an expensive Swiss Army knife. Removed one first strike to make the multiple first strikes of the Submarines more special. The Robotics requirement seems nonsensical and makes the unit very difficult to access.

Credit: <u>Dawn of Civilization</u> lists Stealth Destroyer's submarine detection as a bugfix in its list of features: "Stealth Destroyers detect Submarines as (presumably) intended"

See also: 028 allows Submarines and Stealth Destroyers to defend weaker visible units.

I've only skimmed through <u>this thread</u> (title: "Submarine Confusion"), but I think the participants mostly agree that BtS has its two submarines confused.

Tbd.:

Destroyer is still a bit weak against Submarines. May have to give it an explicit combat bonus

against Submarines (instead of relying entirely on first strikes vs. first-strike immunity), or give Submarines an Ocean attack bonus.

Would be nice to show the abilities shared by the two submarines more compactly in help text and Civilopedia:

"Submarine (invisible, reveals Submarines, can dive under Ice, can explore rival territory)"

Lower the strength of all post-Combustion ships a bit; they don't need to be *that* much more powerful than Ironclad.

Air recon shouldn't reveal Submarines so easily.

Would like to give Stealth Destroyer two missile slots, but so long as two Tactical Nukes can eliminate any stack, this seems a bit too dangerous.

Missile Cruiser needs work. Want to move it to Rocketry, but will first have to make room by moving the spaceflight stuff to Satellites.

907: Uniques	AdvCiv	BtS	before patch 1.52
907a Praetorian	strength 7, cost 40, starts with March named "Legionary"	strength 8, cost 45, named "Praetorian"	strength 8, cost 40 named "Praetorian"
Rationale	and it worked, but this game balance. Suppla	Clearly intended to be easy to recognize as powerful even for new players, and it worked, but this mod isn't for new players, and the unit is toxic for game balance. Supplants all pre-Renaissance units plus Musketman. Because it's so obvious, I'm nerfing this unit before all others. 7 strength for 40 would be fine, I think, but bland. March is a promotion that doesn't give the unit more raw power, but is still useful, and a good fit flavor-wise as the Roman army was known for its forced marches. As for the name change (only in the English game text), Soren Johnson mentioned in a Twitch video that "Praetorian" was chosen over Legion(ary) to avoid repeating too many names from Civ3, and seemed regretful about this. Legionary is obviously a better fit for the BtS unit, and also fits well with my changes.	
	doesn't give the unit m		
	mentioned in a Twitch to avoid repeating too this. Legionary is obvio		
Tbd.	,	Nerf other early attackers, starting with Axeman; Legionary should then perhaps cost 45 again, which also fits with the high-quality equipment of Roman legions.

Quechua	starts with Combat I	starts with Combat I	starts with Combat I	
			+100% vs. Archer	
	named "Quechua Warrior"	named "Quechua"	named "Quechua"	
	The BtS unit is far too powerful, and I don't think the K-Mod nerf really changes that. And players who aren't willing to take advantage of the anti-Archer bonus end up with a unit that is worse than a regular Warrior.			
	"Quechua Warrior" beca	Quechua Warrior" because Quechua is just an ethnic group (like Oromo).		

Want to turn Holkan into the unique Warrior because such an early unique unit makes more sense for an early civilization like the Maya than for the Inca. Free Combat1 could still encourage rush strategies, so I'd rather give the unit an ability that lets it gain XP faster. The Quechua could then
become a unique Maceman with lower combat strength and easier tech requirements than a regular Maceman.

908: Traits	AdvCiv	BtS	K-Mod
908a Financial		+1 commerce in tiles with at least 2 commerce.	(as in BtS)
	ean the yield from terrain not part of the natural yie	, feature, river and hill. Yiel eld.	d from improvement,
Rationale	The Financial trait is by far the most potent trait in the hands of the AI, to the point that games with several Financial leaders get far ahead of the historical time line, and, unlike most other top-tier traits, players can't help but exploit it. Plus, the K-Mod change to Serfdom makes Financial even more powerful. For these reasons, I've decided to nerf the Financial trait ahead of a full overhaul of the traits that I might still do in the future.		
	Several mods, e.g. <u>Rebalance the Realms</u> , raise the extra yield threshold from 2 to 3, which is easy to do through XML. In terms of power level this seems OK if building discounts are granted in addition (or other traits nerfed), but then there would be no trait that makes coastal cities more worthwhile (without also requiring the Colossus).		
Config	I've changed the semantics of the ExtraYieldThreshold ability through the DLL. So, not really configurable; sorry.		
Tbd.	Would like to split Financial into two traits eventually, one dealing with coand rivers (seafaring flavor), the other with terrain improvements (entrepreneurial flavor).

	The AI used Pacifism rarely in K-Mod, and the AdvCiv change might've made the civic unusable for the AI. Therefore, the AI supply cost modifier now applies to the Pacifism cost. This should be not nearly as confusing as the BtS approach because the human cost is always the same, and the AI cost is simply 50% of that. Since the AI needs far more units than the human players to guard its cities, I think it's fair to place a 50% discount on anything that punishes a high unit count.		
See also	250d makes the AI suppl	y cost modifier truly indep	endent of difficulty

912c	AdvCiv	BtS/K-Mod	

Hereditary Rule	1 happiness per 2 military units 1 happiness per military unit	
	+25% happiness from resources Low upkeep Low upkeep	
Config	Can restore the BtS ability in Civ4CivicInfos.xml. If iHappyPerMilitary Unit is set to 2, the game treats it as 1 happiness per (one) military unit.	
Rationale	The BtS ability is fiddly, encourages players to train lots of Warriors and never upgrade them (or generally to train more units than needed), makes it too easy to grow cities without buildings and is a poor fit flavor-wise (would fit for a military dictatorship). This ability should arguably be removed from the game entirely, but the replacement that I have in mind (see <i>Tbd</i> .) would require some other balance changes that I don't want to make yet.	
	I had to come up with a temporary solution after change <u>036</u> (AI trades away non-surplus resources if it doesn't need them) because there were too many civs offering happiness resources during the second third of the game and too few civs willing to import them.	
	The bonus to resource happiness should make Hereditary Rule better than Representation at least in some (rare) circumstances, namely when a civ has a lot of luxury resources (and the matching buildings) and needs even more happiness (due to war weariness I guess). The bonus also means that civs can normally get 2 extra happiness out of Hereditary Rule without making a particular effort, namely by having at least 4 luxuries and stationing a second unit.	
Tbd.	Want to give it +1 happiness from Monument and Castle and +35% or 40% happiness from resources in the end (and nerf Representation a bit). Will first have to make changes to the Charismatic trait and to Castle.	
912d Slavery	New game option "No Slavery" prevents human civs from adopting the Slavery civic, but allows cities with a Sacrificial Altar to sacrifice population regardless of civics.	
Tbd.	A replacement civic; see <u>future gameplay changes</u> , specifically <u>this</u> file. The Kremlin will also need a new ability eventually.	
Rationale	The balance issues with the hurry ability could probably be solved by allowing only 1 citizen to be sacrificed at a time and by basing the production yield on the city size, but the ability is also complicated, tedious to use (practically requiring the noisy can-hurry alert to be enabled) and highly unrealistic (less so with Sacrifical Altar).	
	So long as I haven't implemented a civic to replace Slavery with, disabling Slavery needs to be optional. Treat the "No Slavery" option as an extra challenge for the human player for now; the AI uses Slavery only sparingly anyway (see 121).	
	Of course one could simply not use Slavery, without the need for a game option, or use it only to train defenders in the event of a surprise attack; the game option is mostly intended to raise awareness.	
Config	Can hide the option in Civ4GameOptionInfos.xml.	

test	Temporary changes for debugging and testing are marked with advc.test. or	
	advc.tmp.	

I've kept a "Giant" world size setting commented out in <code>Civ4WorldInfos.xml</code>. I use it for tests with more than 18 civs. It's from vincentz's 34-civ mod.

make	Changes to the compilation process are marked with advc.make.
Credits	The AdvCiv Makefile is essentially <u>DannyDaemonic</u> 's.

See also	307 prevents the Barbarians from tra	aining some later-era units.
dlph.7	Can nuke despite neutral units; they	take no damage.
Rationale		nout having to declare war), this would again be taking damage is counterintuitive, but I don't see a
dlph.8	"Fixed bug in AI evaluation of gifted	unit for the purpose of relations bonus."

Not merged	"Player cannot gift combat units to third party which in war with rival with whom the player has unbreakable (temporary or permanent) peace treaty. Also, the receiving player now must satisfy technology requirements (both for the unit itself and for the prerequisite resources)."	
	These aren't restrictions that players would intuitively expect, and I'm not sure that they're necessary. (I do think that there should be diplomatic consequences for gifting units beyond "traded with our worst enemy.")	
dlph.9	"Fixed how AI and worker actions treat fallout feature. Fallout had bNoImprovement set to 1 signaling to AI that no improvements can be built there which didn't make sense since fallout can be cleared just like forest and jungle can. This made AI far less likely to scrub fallout (if at all) than to chop jungle although the features are similar. Improvements can now be built directly on top of fallout and fallout will be cleared in the process just like it is with forest and jungle.	
	Fixed interface and AI bug that caused the game to sometimes wrongly show an improvement as unbuildable. Sometimes the game doesn't [realize] that an improvement can be built. E.g. plains jungle yields 0 food so farm cannot be built as it requires 1 food, but farm can be built there by choping the jungle as the underlying plains terrain yields 1 food. AI followed the same slightly flawed logic as did the interface. My fix for fallout feature introduced many more such situations."	
dlph.10	"Added verification of state religion. Player shouldn't be able to keep their state religion when there are no cities with it anymore."	
Rationale	Disabled this again. I don't want to force a civ out of its religion while it may still try to reconquer its holy city.	
Config	Disabled through CvPlayer::doTurn.	
dlph.11	"Fixed advanced start bug with reduced unit costs. Advanced start code is bad in general so I just fixed the immediate problem. (There was a way to get extra gold by refunding a worker while having expansive trait.)"	
dlph.12	"Removed Disorganized promotion from free barbarians boats with hidden nationality. Hidden nationality units shouldn't be too obviously (non-)barbarian."	
	(But I'm not allowing Barbarians to have Privateers.)	
dlph.13	"Fixed permanent alliance bug with AP/UN leader. Similar as with other permanent alliance bugs, if AP/UN leader had higher team number than its permanent ally an empty team would become AP/UN leader instead of the newly formed team."	
Not merged	"Changed condition when is a team considered AP/UN full member (and thus eligible for election). Previously all team members had to be full members, but now at least one is enough."	
	I don't have an opinion on how this should work.	
dlph.14	"Set barbarian unit [gold] costs to 0. These costs don't affect barbarians directly, but they still do influence some decisions."	
	Git commit	
dlph.15	"Moved the code for building missiles for missile carriers outside of assault only case. K-Mod made similar change for building planes for carriers already so I did the same for missiles. Also fixed a bug when checking whether there are enough missiles already."	
	Git commit	

	"Bomb Shelter was previously always evaluated as almost completely worthless (!!!). I think that AI should build it as soon as possible pretty much everywhere as it is very cheap and effective."	
	Git commit	
Not merged	"SDI evaluation previously ignored that nukes can quickly obliterate entire militaries and there were some issues with estimating number of nuclear attacks."	
	Too much work to merge considering that the rules for nukes will have to change at some point, and that the AI code will have to be revised afterwards.	
dlph.17	"Game era calculation changed from rounding down to rounding of all players' average era."	
	Git <u>commit</u>	
Rationale	I had always assumed that it worked this way, and I'm frequently referencing the game era in AI and Barbarian code, so this should be a significant improvement.	
	"Added Advanced Settlers game option. When used, settlers behave similarly like in Advanced Era starts, i.e. new cities start with more buildings and population as the game progresses through eras. Settler era is a minimum of player's era and game era []"	
	I want to add something like this, but I'm not quite happy with the implementation. Looks like it could reward stockpiling Settlers, and the cost of a Settler can increase while in production if the player or game era changes, which is a bit messy. Alternative solutions implemented in other mods: A second Settler unit ("Colonist") with a tech requirement in late Renaissance (which mod was that?) and Realism Invictus's Ministries. Another idea: A production bonus for Ancient and Classical buildings from e.g. the Steel technology.	
	"Hidden game options are now always set to their default value as they cannot be changed or interacted with anyway and switching between mods can mess up those options."	
	(But I've implemented it through CvInitCore::resetGame.)	
	"Capital cannot be moved while spaceship is underway. Reason is the fact that capturing the capital destroys the travelling spaceship, so capital cannot be hidden in this way after the launch."	
	Would prefer to let the production cost of Palace increase over the course of a game. This could also make it easier to move the capital in the early game when starting in an akward spot.	
See also	cdtw.6 causes the AI to move its capital when close to a Space victory.	
	"Fixed Bomb Shelter effect for non-combat units. Bomb Shelter used to reduce the probability of nuke destroying a non-combat unit from around 80% to around 2-3% (these probabilities are not immediately obvious and have to be calculated; exercise is left for the reader) because someone was not careful with probabilities. NUKE_NON_COMBAT_DEATH_THRESHOLD was probably picked so that the probability is close to average nuke damage to combat units (which is 79%).	
	I changed the chance to destroy a non-combat unit to exactly 79%, and Bomb Shelter halves that so those are now exactly the same as average damage to combat units. NUKE_NON_COMBAT_DEATH_THRESHOLD is now unused."	
	Git <u>commit,</u> later <u>bugfix</u> The formula sounds legit; just copied it.	

dlph.21	"Show barbarian territory on the mir	nimap and in the globe view."
	Git commit	
dlph.22	"Changed average handicap [in multiplayer] from round down to round."	
	Git commit	
See also	250a bases that computation on diff XML.	ficulty values assigned to each handicap through
dlph.23	AdvCiv	Kek-Mod
Culture after which conve culture. I've liberation an	Razing: Not merged; no tile culture is removed. Culture after trade is handled by change 122, which converts only a fraction of city and tile culture. I've adopted the equal treatment of beration and regular city trade from Kek-Mod. We merged this change. Cities liberated upon the creation of a colonial vassal still receive the ree units; that's also the case in Kek-Mod. "Reworked how culture behaves when a city is razed or acquired. Razing a city will now erase (most of) its plot culture. Trading a city will transfer both city and (most of) plot culture to the new owner. Not all plot culture will be included because plot culture is generated by different mechanisms (eg. trade routes and free plot culture) and increasing and decreasing city culture doesn't result in adding and removing the same amount of plot culture. Also, liberated cities don't get free units just because a vassal acquired them and diplomatic votes resulting in changing of city ownership will leave old owner's culture intact. An attempt to get more consistent and sane plot/city culture effects related to city trades." Git commit	
Rationale	alone culturally) "cleanse" a region.	azing a city shouldn't be enough to ethnically (let Likewise, city ownership agreed to on paper / cultural conflicts in favor of the new owner.
Tbd.	Razing should cause some loss of t	ile culture.
dlph.24	"Colonies don't inherit espionage po or necessary), but they do inherit Es	pints from parent civ anymore (this didn't seem fair spionagePointsEver."
	Git commit	
Not merged		anymore as this can cause weird bugs x. Number of players can be easily increased (it ary."
	performance penalty. Reusing slots	only 18 and increasing it comes with a is not really compatible with the <u>Immortal Culture</u> set to 0 when the colonial vassal is initialized), but I all vassals in games with 18 civs.

dlph.25	"Reworked resolutions. Fixed multiple bugs and inconsistencies with conditions for proposing and defying resolutions. [] Vassals cannot defy resolutions anymore. Players can defy resolution assigning them a city. AI can now choose (and vote) to repeal resolutions."
	Git commit
	Changed it so that only capitulated vassals are unable to defy. Voluntary vassals can defy everything except war and peace votes (in BtS, they can defy everything, in BBAI they can defy peace votes but not war votes).
	Regarding a comment in CvPlayerAI::AI_diploVote about vassals and friends of the Secretary General in repeal votes: "[O]nly important if the Secretary General plans to vote yes. Incorporating the other case properly would be a lot of additional work". I've tried to do that extra work; hope I got it right (so that friends and vassals help the Secretary General repeal resolutions).
	"Human vassals are forced to vote for their master. Unless they are also a candidate themselves."
	Git <u>commit</u>
	Only relevant for the $R\&F$ option because humans can't normally become vassals in AdvCiv.
	I'm only applying this to capitulated human vassals.
	"War resolution can now be proposed against voting members (and non-members). Defensive pacts with attackers are cancelled before implementing war resolution."
	I don't think this ever works the way it's implemented in Kek-Mod. CvGame::canDoResolution checks if all voting members — including the target! — are able to declare war on the target. I've corrected that: Now only full members are checked, only they declare war and only they can defy the resolution. These change are tagged with dlph.25/advc. Moreover, only peace treaties of the AP leader can block a war resolution; peace treaties of other members don't matter. (But the AI tries to honor its promises by voting against war when there is a peace treaty.)
Rationale	Shouldn't expect human players to keep track of peace treaties between AI civs, and don't want to allow players to block war votes by signing peace treaties (e.g. by asking for a gift). K-Mod already allowed vassal agreements to override peace treaties.
See also	130f deals with stop-trading resolutions in a similar way.
Tbd.	Planned changes to membership rules (see <u>178</u>) will address the problems with war votes in a simpler way. And I don't think I want civs without a state religion to be eligible targets for war votes.
Not merged	"Religious population for votes in AP is now divided by number of religions in the city. Defiance penalty is now given to the whole team if one team member defies a passing resolution."
	This penalizes civs too much for heaving multiple religions and might weaponize Missionaries of non-AP religions. Also, a state religion tends to have larger communities than a non-state religion (and a civ with a state religion not matching the AP religion already has its votes reduced).
	Not sure about the defiance penalty. If civs vote individually, then it seems that they should also bear the consequences individually.
See also	130v makes capitulated vassals vote along with their master and places many other restrictions on capitulated vassals. 178: My own changes to AP votes

k146

K-Mod update 1.46

"Fixed estimateCollateralWeight with non-combat units."

"Fixed potential divide-by-zero in AlestimateBreakEvenGoldPercent"

"Fixed overflow bug in CvCity::doPlotCultureTimes100"

Not merged; AdvCiv had already fixed these.

"Adjusted of attitude of human players toward Al."

Not merged; I think I got this covered already.

"Restored WHEOOHRN scoreboard indicator."

Not merged; see 210a.

"Tweaks to default options."

Not merged: "Great person bars should be on by default." (Disagree.)

"Increased trade culture rate. Instead of 1% per culture level, it's now the average of that and the max rate. ie. percentage = (current level + max level)/2;"

Merged although trade culture is disabled by default in AdvCiv (see 125).

"Updated loading hints: [...] added [...] alt-wake [...]"

That's the only new hint I've merged (press Alt to wake up units worldwide).

"changes to AI_techValue [...] Increased chop value."

I had to water this down a bit because, in combination with change <u>036</u>, the AI was prioritizing Bronze Working and Iron Working too much.

The remaining changes, i.e. the bulk of the update, are in the back end of the AI and I've merged them almost without adaptation:

"Fixed handling of AI_follow actions which split the group.

CvSelectionGroupAI::AI_update no longer assumes that the group stays intact with CvUnitAI::AI_follow actions."

This fixes a fairly rare non-reproducible crash-to-desktop bug.

"Added CvPlaver::haveResourcesToTrain

This is used to help with AI decisions when it isn't clear which city we'll be building in."

Used in just one place so far though.

"Decreased food devalue rate. (Fast growth is more highly valued.)

bEmphasizeFood causes more optimistic evaluation of slave-whipping.

SlaveryValue re-written to use a 'devalue rate' system.

growth Value now takes into account the food cost of worked jobs.

'plotMagicValue' now (usually) assumes fully-upgraded improvements.

'Emphasise food' should work better now.

CvPlot::getYieldWithBuild bWithUp now uses full upgrade rather than 2 stages."

"AI_updateCommerceWeights now better understands focused espioange.

Having very high values on the espionage weight slider are now taken to mean that you don't want to spend espionage on the other teams. This reduces the chance of the AI choosing to assign spies inapproriately. Previously, having a non-zero weight against a team was taken to mean that the player wanted to [have?] espionage points against that team - and thus espionage was more highly valued if the points were low. Now that is only the case if the weight is above a certain threshold. The threshold is based on total weight, and number of teams etc."

"Minor changes to AI unit movements.

Tweaked attack threshold for Al_attackCityMove. Increased the acceptable number of ship loading turns Al_attackCityMove

Disabled the 'smart' danger aversion in Al_pirateBlockade. (It was computationally expensive, and not particularly effective.)"

"Minor tweaks to CvCityAI::AI buildingValue

Reduced building value of free-tech. (The evalutation for this is still just a very poor guess; but it is very diffcult to evaluate it properly. A true evaluation would require details which we currently do not take into account.)

Reduced the value of espionage commerce multipliers."

"Many changes to Al techUnitValue

We now use slightly more detailed war state info: bLandWar, blsAnyAssault.

Default AI type max value weight increased from 100 to 250, but calculated weight decreased. (ie. Units that are good at their default role will now be valued much more highly; but units that are poor will be valued slightly lower.)

Increased max value weight for non-default types (from 100 to 150).

Adjusted most military values based on bLandwar status, as well as other strategy adjustments; such as for ECONOMY FOCUS.

Added an optimistic value bonus for tech which reveal required resources."

"For UNITAI_COUNTER, reduced value of attack modifier, added value for defence modifier. Reduced value of speed. For UNITAI_CITY_DEFENSE, added value for hills defence."

"Tweaked small-city yield evaluation. Yield evaluation now assumes that cities with population < 3 will want to grow, even if there are currently no good jobs. This helps prevent flip-flopping with food plots."

"Many changes to Al_techValue.

Disabled the random value bonuses for techs with iPathLength > 1. (Raw bonus, and bonus from wonders). ie. techs for which not all preregs have been met no longer get these random bonuses.

Note: This is partially to help the AI focus on real benefits; but a big reason for removing this randomness is a technical one. [...] changing the way multi-step research paths are evaluated. Having randomness in prereqs could upset the evaluations because the values will be used for several techs. Decreased random wonder value.

Increased the value of gold trading.

Changed several constant values to scale with the number of cities. (These things don't necessarily have anything to do with the number of cities. We're only multiplying by cities so that the value scales like things which are evaluated properly.)

Moved project evaluations to a new function: Al techProjectValue.

Increased value of civic improvements.

Decreased the value of religions.

Rewrote evaluatation of bonus techs. It's now based on the average of the max tech cost and average tech cost for currently researchable techs.

Renamed bignoreCost to bFreeTech, to better reflect what the argument is used for. Rescaled the return value so that it is roughly comparable for free and non-free tech.

Renamed "tech whoring" to "tech ground-breaking", to better reflect the concept. (ie. getting the tech first, for better trade options.) Slightly increased the value."

"Rewrote CvPlayerAl::Al bestTech to better consider tech pathways.

Previously the AI would choose to beeline high-value techs within the depth limit without considering the prerequisites at all. This sometimes led to poor choices; eg. getting stuck on very high cost prereqs, or researching prereqs which would obsolete important bonuses. In the new system, the AI only ever chooses techs that they can research; but adds value based on which techs follow on.

NOTE: this is a totally new system which will require some changes and balance."

I had fixed these two bugs and another one mentioned here by Mattygerst, but replaced my bugfixes with the code karadoc released in early May 2018. I've decreased the DepthRate so that the AI is less interested in beelining toward powerful techs. I worry that a high DepthRate makes AI tech paths too predictable.

kmodx	Bugfixes from K-Mod Extended

Credits	By alberts2
	Git repository
	These issues appear to have been found through a stricter compiler or some other
	code analysis tool. A lot of it just improves hazardous code, but there are also actual
	bugfixes, e.g. comparisons betweens different enum types and a mix-up of inner- and outer-loop variables. Hard to say how significant these bugs were, but good riddance!
	outer-loop variables. Hard to say flow significant these bugs were, but good riddance:
	I'm listing the descriptions of the merged Git commits below.
	K-Mod 1.45 includes these fixes as well, but I had merged them separately before v1.45 was published.

"Fixed a MemoryLeak in CvDllPythonEvents::reportSelectionGroupPushMission

Fixed a memory leak in CvGameTextMgr::setCombatPlotHelp

Fixed uninitialized variables in CvInfoWater.cpp

Fixed the CyGameTextMgr(CvGameTextMgr* pGameTextMgr) constructor
Fixed a few coding errors
Fixed various coding errors"

cdtw	Al changes by Dave_uk
Credits	Source (LoR SDK ModMod) Dave's changes in the LoR code are tagged with "CD Tweaks". I don't know what the "CD" stands for, but, anyway, hence my tag "cdtw".
	I've adoped only a small portion of his changes because some are only important for LoR (with its focus on modern warfare), many superseded by K-Mod/AdvCiv and a few I didn't find worth having (e.g. because of a planned gameplay change or too minor). And I've made some small changes to the code I did adopt.
cdtw.1	"vassals are more keen to keep [rather than raze] cities, as they can't declare war themselves to expand"
cdtw.2	Regarding the AI choice of target city when in a Blitz or Fast-mover strategy: "when blitzing place higher value on cities with no defense modifiers"
cdtw.3	Al evaluation of tech that unlocks a process (Alphabet, Currency, Drama): "value good processes if we already have lots of units, and are not at war with anyone".
	Disabled this again after some testing. Early unit spending doesn't seem to be an issue in K-Mod/AdvCiv.
cdtw.4	Greater willingness to switch to Police State when war weariness is painful.
cdtw.5	"if we're worried about being attacked, don't wait to sign defensive pacts"
cdtw.6	"if we're going for a space victory let's quietly relocate our capital away from the coast"
	Probably bugged in LoR SDK ModMod because AI_isDoStrategy had been confused with AI_isDoVictoryStrategy.
See also	dlph.19 disallows moving the capital once the spaceship has been launched. So the Al can only move its capital prior to launch.
cdtw.7	"if going for culture victory, build lots of fighters to avoid be[ing] blitzed"
	Disabled again. I guess that's really only smart when playing with Dale's Combat Mod.
cdtw.8	"if our best city attacker is crappy, be less likely to build invaders, unless we aren't paying support costs yet"
	Disabled again; K-Mod seems to have this covered.

cdtw.9	In Unit AI, a few checks for same owner replaced by same team.
_	
advc.rom	Misc. changes adopted from RoM-based mods
Credits	Some of the largest Civ 4 mods are based on <u>Rise of Mankind</u> (RoM, started 2007), including <u>A New Dawn</u> (Rand), <u>Caveman to Cosmos</u> (C2C), <u>Vincentz Infinite Projects</u> (VIP) and <u>Dawn of the Overlords</u> (DotO).
	RoM/Rand and C2C have had several AI programmers among their contributors. It seems that most of the AI changes are specific to the many features added by those mods, superseded by K-Mod/AdvCiv or not worth adopting from a cost-benefit angle.
	I'm listing some of the changes that I did adopt here; others are so minor that I'll only tag them with "advc.rom" in the source code.
Tbd.	I'm still in the process of sifting through the revision histories on SourceForge.
rom1	"% modifiers are undervalued by the AI for two reasons: 1) It only calculates its efect at the time of construction, but that discounts future increases as base reserach goes up 2) In the early game because this calculation only takes account of the absolute increase, not its proportion of the civilization whole, which will be substantial early on (indeed 100% with 1 city). We therefore apply a small boost to reflect futures, and compare to the whole and make an upward adjustment proportional to the ratio with the civilization whole. FUTURE - should we do this for other commerce types too? I am inclined to say no for hammers (since what you produce with them sacles with civ size, which the tech tree does not except very indirectly via progression through it). Not sure about gold or espionage."
	SVN revision
	This change increases the utility assigned by the AI to buildings that increase a city's research rate. However, this applies only when the City AI wants to focus on research buildings, which is actually never the case in K-Mod. So I'm also adding this Koshling change from the same revision:
	"increased priority for economic builds,"
	which makes the AI choose city production with focus on all economy buildings, including research buildings.
	Removed this again; in multiple test games, it never had any effect. Looks like K-Mod already prioritizes economic buildings sufficiently. The AdvCiv code with the change still present: Git commit
Credits	Koshling
rom2	Al doesn't reassign working plots while in anarchy as "plots return no yields anyway."
	SVN revision
	Reassigned working plots don't seem to be causing problems in AdvCiv, but it does save some CPU time.
Credits	Afforess
